Burgess, 1996 This book which was written by the current leaders in the field of Ras research provides the readers with the most comprehensive and up to date view of the major oncogene Ras This volume is valuable not only for university students in molecular biology biochemistry or medicine but also for senior scientists currently conducting cancer research

Signaling Networks and Cell Cycle Control J. Silvio Gutkind, 2000-04-14 Leading scientists summarize the latest findings on signal transduction and cell cycle regulation and describe the effort to design and synthesize inhibiting molecules as well as to evaluate their biochemical and biological activities They review the relevant cell surface receptors their ligands and their downstream pathways Also examined are the latest findings on the components of novel signaling networks controlling the activity of nuclear transcription factors and cell cycle regulatory molecules Cutting edge and highly suggestive Signaling Networks and Cell Cycle Control The Molecular Basis of Cancer and Other Diseases presents a wealth of information on the emerging principles of the field as well as an invaluable guide for all experimental and clinical investigators of cell regulation and its rapidly emerging pharmacological opportunities today

Ras Signaling Network and Regulation in S. Cerevisiae Cemile Gökçe Güldal, 2007 Ras proteins mediate cellular growth and differentiation in response to external cues Mammalian H ras protein and its homologs in eukaryotes are central signaling hubs in coordinating cellular responses to changes in the environment such as nutrient availability and a variety of stresses This dissertation explores the topology of the Ras signaling network in yeast as well as its regulation

Biochemistry of Signal Transduction and Regulation Gerhard Krauss, 2014-04-21 Originally based on a graduate course taught by the author this true classic has once again been extensively updated to incorporate key new findings in biological signaling With over half of the content re written plus 70 brand new and 50 revised figures this is the most up to date textbook on signaling available anywhere Thanks to its clear structure hundreds of illustrative drawings as well as chapter introductions and newly added study questions this text excels as a companion for a course on biological signaling and equally as an introductory reference to the field for students and researchers Generations of students and junior researchers have relied on the Krauss to find their way through the bewildering complexity of biological signaling pathways

Signal Transduction in Leukocytes Pramod M. Lad, John S. Kaptein, Ching-Kow Lin, 1995-11-27 Signal Transduction in Leukocytes presents important principles and various aspects of

cellular regulation in leukocytes The book discusses receptor structure and signaling emphasizing cytokine receptors and the T cell and B cell antigen receptors It investigates the role of the heterotrimeric G proteins and small G proteins as transducers Authorities in each field cover a wide range of topics They explore propagation of signaling cascades through second messengers and serine threonine kinases the initiation of signaling from the B and T cell antigen receptors by tyrosine phosphorylation and protein recruitment and the role of signaling in cell cell interactions and the regulation of the cell cycle The book outlines the relationship of receptor signaling to inflammatory reactions of neutrophils eosinophils and macrophages

Systems Biology for Signaling Networks Sangdun Choi, 2010-08-09 System Biology encompasses the knowledge from diverse fields such as Molecular Biology Immunology Genetics Computational Biology Mathematical Biology etc not only to address key questions that are not answerable by individual fields alone but also to help in our understanding of the complexities of biological systems Whole genome expression studies have provided us the means of studying the expression of thousands of genes under a particular condition and this technique had been widely used to find out the role of key macromolecules that are involved in biological signaling pathways However making sense of the underlying complexity is only possible if we interconnect various signaling pathways into human and computer readable network maps These maps can then be used to classify and study individual components involved in a particular phenomenon Apart from transcriptomics several individual gene studies have resulted in adding to our knowledge of key components that are involved in a signaling pathway It therefore becomes imperative to take into account of these studies also while constructing our network maps to highlight the interconnectedness of the entire signaling pathways and the role of that particular individual protein in the pathway This collection of articles will contain a collection of pioneering work done by scientists working in regulatory signaling networks and the use of large scale gene expression and omics data The distinctive features of this book would be Act a single source of information to understand the various components of different signaling network roadmap of biochemical pathways the nature of a molecule of interest in a particular pathway etc Serve as a platform to highlight the key findings in this highly volatile and evolving field and Provide answers to various techniques both related to microarray and cell signaling to the readers

Targeting Key Cellular Signaling Network for Cancer Chemotherapy and Immunotherapy Bo Zhai, Zhendong Jin, Chen Yang, Gang Tian, 2024-06-04 The cellular signaling network refers to the complex system formed by the interactions between various signaling molecules and receptors within and between cells It consists of multiple signaling pathways that mediate intricate cellular interactions both internally and externally The development of cancer is closely associated with the intricate signaling transduction network within cells where multiple signaling pathways are interconnected and collectively regulate the biological phenotypes of tumor cells

EGFR Signaling Networks in Cancer Therapy John D. Haley, William John Gullick, 2009-03-01 The epidermal growth factor EGF receptor and its downstream signal transduction networks have been implicated in the ontology and maintenance of tumor tissues which has motivated

the discovery and development of molecularly targeted anti EGF receptor therapies Over decades of study the EGF receptor structure its ligand binding domains the physical biochemistry underlying its intrinsic tyrosine kinase catalytic function and the modular interactions with SH2 PTB and SH3 domain containing signaling adaptor proteins required for signal transduction have been extensively dissected Not only is the EGF receptor the nexus of many streams of information but it also forms one part of a calculating device by forming dimers and oligomers with the other three receptors in its family in response to at least eleven ligands some of which are expressed in multiple forms with overlapping or quite distinct functions This phenomenon while recruiting to the inner surface of the cell membrane and activating multiple second messenger proteins also allows the possibility of cross talk between these systems permitting a further layer of information to be exchanged Less well described are the cross regulation of the EGF receptor and other anti apoptotic mitogenic and metabolic signaling systems The study of these systems has yielded new surprises One hurdle in these efforts has been that signal transduction pathways have frequently been defined in the generic absence of their tissue specific or cell interaction specific context

Oxford

Textbook of Cancer Biology Francesco Pezzella, Mahvash Tavassoli, David Kerr, 2019-05-02 The study of the biology of tumours has grown to become markedly interdisciplinary involving chemists statisticians epidemiologists mathematicians bioinformaticians and computer scientists alongside biologists geneticists and clinicians The Oxford Textbook of Cancer Biology brings together the most up to date developments from different branches of research into one coherent volume providing a comprehensive and current account of this rapidly evolving field Structured in eight sections the book starts with a review of the development and biology of multi cellular organisms how they maintain a healthy homeostasis in an individual and a description of the molecular basis of cancer development The book then illustrates as once cells become neoplastic their signalling network is altered and pathological behaviour follows It explores the changes that cancer cells can induce in nearby normal tissue the new relationship established between them and the stroma and the interaction between the immune system and tumour growth The authors illustrate the contribution provided by high throughput techniques to map cancer at different levels from genomic sequencing to cellular metabolic functions and how information technology with its vast amounts of data is integrated with traditional cell biology to provide a global view of the disease The effect of the different types of treatments on the biology of the neoplastic cells are explored to understand on the one side why some treatments succeed and on the other how they can affect the biology of resistant and recurrent disease The book concludes by summarizing what we know to date about cancer and in what direction our understanding of cancer is moving Edited by leading authorities in the field with an international team of contributors this book is an essential resource for scholars and professionals working in the wide variety of sub disciplines that make up today's cancer research and treatment community It is written not only for consultation but also for easy cover to cover reading
