Antitrust Policy and Interest-Group Politics William F. Shughart, 1990-04-09 This groundbreaking study is the first to apply an analytical model derived from the interest group theory of regulation to the study of antitrust law and policy The application of this model which stresses that government intervention in the economy will always benefit some political groups at the expense of others to the analysis of antitrust enables Shughart both to identify important trends in the antitrust arena and demonstrate which groups have benefited most from antitrust legislation His analysis clearly shows that consumer

welfare is often not enhanced by antitrust suits or legislation Rather well organized private interest groups have tended to benefit more even in cases where consumer welfare is the stated goal of legislation or policy Divided into three sections the volume begins by discussing normative and positive theories of antitrust The author provides an overview of the origins of antitrust law and policy and introduces the interest group theory of government The second section explores the various private interests that impinge on antitrust policy the business community the antitrust bureaucracy Congress the judiciary and the antitrust bar Finally Shughart examines the political economy of antitrust He shows how antitrust can be used to subvert competition and offers suggestions for reform in the realm of interest group politics Students of economics and business as well as professional economists corporate lawyers legislators and business consultants will find important new insights into the direction taken by antitrust policy during the last few decades
