Relativistic Astrophysics Igor D. Novikov, Ia. B. Zel'dovich, 1978 **Stars and Relativity** Ya. B. Zel'dovich, I. D. Novikov, 2014-06-10 Two of the greatest astrophysicists of the 20th century explore general relativity properties of matter under astrophysical conditions stars and stellar systems A valuable resource for physicists astronomers graduate students 1971 edition **Einstein's Field Equations and Their Physical Implications** Bernd G. Schmidt, 2008-01-11 This book serves two purposes The authors present important aspects of modern research on the mathematical structure of Einstein's field equations and they show how to extract their physical content from them by mathematically exact methods The essays are devoted to exact solutions and to the Cauchy problem of the field equations as well as to post Newtonian approximations that have direct physical implications Further topics concern quantum gravity and optics in gravitational fields The book addresses researchers in relativity and differential geometry but can also be used as additional reading material for graduate students The Theory of Sound, Volume One J. W. S. Rayleigh, 2013-01-17 Volume One covers harmonic vibrations systems with one degree of freedom vibrating systems in general transverse vibrations of strings longitudinal and torsional vibrations of bars vibrations of membranes and plates curved shells and plates and electrical vibrations Topology John G. Hocking, Gail S. Young, 2012-05-23 Superb one year course in classical topology Topological spaces and functions point set topology much more Examples and problems Bibliography Index Analytical Methods of Optimization D. F. Lawden, 2006-05-05 Suitable for advanced undergraduates and graduate students this text surveys the classical theory of the calculus of variations It takes the approach most appropriate for applications to problems of optimizing the behavior of engineering systems Two of these problem areas have strongly influenced this presentation the design of the control systems and the choice of rocket trajectories to be followed by terrestrial and extraterrestrial vehicles Topics include static systems control systems additional constraints the Hamilton Jacobi equation and the accessory optimization problem Prerequisites include a course in the analysis of functions of many real variables and a familiarity with the elementary theory of ordinary differential equations especially linear equations Emphasis throughout the text is placed upon methods and principles which are illustrated by worked problems and sets of exercises Solutions to the exercises are available from the publisher upon request **Neutron Stars 1** P. Haensel, A. Y. Potekhin, D. G. Yakovlev, 2006-11-03 The book gives an extended review of theoretical and observational aspects of neutron star physics With masses comparable to that of the Sun and radii of about ten kilometres neutron stars are the densest stars in the Universe This book describes all layers of neutron stars from the surface to the core with the emphasis on their structure and equation of state Theories of dense matter are reviewed and used to construct neutron star models Hypothetical strange quark stars and possible exotic phases in neutron star cores are also discussed Also covered are the effects of strong magnetic fields in neutron star envelopes **Continued Fractions** Aleksandr I. Akovlevich Khinchin, Herbert Eagle, 1997-05-14 Elementary level text by noted Soviet mathematician offers

superb introduction to positive integral elements of theory of continued fractions Clear straightforward presentation of the properties of the apparatus the representation of numbers by continued fractions and the measure theory of continued fractions 1964 edition Prefaces *Introduction to Symbolic Logic and Its Applications* Rudolf Carnap, 2012-07-12 Clear comprehensive and rigorous treatment develops the subject from elementary concepts to the construction and analysis of relatively complex logical languages Hundreds of problems examples and exercises 1958 edition *Mathematical Foundations of Quantum Mechanics* George W. Mackey, 2004-01-23 This graduate level text introduces fundamentals of classical mechanics surveys basics of quantum mechanics and concludes with a look at group theory and quantum mechanics of the atom 1963 edition **Nuclear Science Abstracts** , 1975 **Thermodynamics and the Kinetic Theory of Gases** Wolfgang Pauli, Charles P. Enz, 2000-01-01 Examines basic concepts and the First Law Second Law equilibria Nernst's Heat Theorem and the kinetic theory of gases Includes an index and a wealth of figures An important resource for students and physicists it can be read independently by those who wish to focus on individual topics 1973 edition **Matrices and Linear Transformations** Charles G.
