Microbial Biodegradation and Bioremediation Techniques and Case Studies for Environmental Pollution Second Edition describes the successful application of microbes and their derivatives for bioremediation of potentially toxic and relatively novel compounds in the environment Our natural biodiversity and environment is in danger due to the release of continuously emerging potential pollutants by anthropogenic activities Though many attempts have been made to eradicate and remediate these noxious elements thousands of xenobiotics of relatively new entities emerge every day thus worsening the situation Primitive microorganisms are highly adaptable to toxic environments and can reduce the load of toxic elements by their successful transformation and remediation This completely updated new edition presents many new technologies and techniques and includes theoretical context and case studies in every chapter Microbial Biodegradation and Bioremediation Techniques and Case Studies for Environmental Pollution Second Edition serves as a single source reference and encompasses all categories of pollutants and their applications in a convenient comprehensive format for researchers in environmental science and engineering pollution environmental microbiology and biotechnology Describes many novel approaches of microbial bioremediation including genetic engineering metagenomics microbial fuel cell technology biosurfactants and biofilm based bioremediation Introduces relatively new hazardous elements and their bioremediation practices including oil spills military waste water greenhouse gases polythene wastes and more Provides the most advanced techniques in the field of bioremediation including insilico approach microbes as pollution indicators use of bioreactors techniques of pollution monitoring and more Completely updated and expanded to include topics and techniques such as genetically engineered bacteria environmental health nanoremediation heavy metals contaminant transport and in situ and ex situ methods Includes theoretical context and case studies within each chapter

Soil-Subsurface Change Bruno Yaron, Ishai Dror, Brian Berkowitz, 2012-02-18 This book combines soil science earth science and environmental geochemistry providing comprehensive background information for specialists interested in chemical induced changes in the soil subsurface system Readers are introduced to the chemistry of contaminants that often disturb the natural soil subsurface

equilibrium as a result of human activity While the soil subsurface system has in many cases been affected by human impact the effects of chemical contaminants on the actual matrix and properties have been largely neglected The major focus of the book is on changes to the soil subsurface matrix and properties caused by chemical pollution By integrating results available in the literature we observe that chemical pollutants may lead to the irreversible formation of a new soil subsurface regime characterized by a matrix and properties different than those of the natural regime In contrast to the geological time scales dictating natural changes to the matrix and properties of the soil subsurface system the time scale associated with chemical pollutant induced changes is far shorter and extends over a human lifetime scale The numerous examples presented in the book confirm that chemical contamination should be considered as an additional factor in the formation of a contemporary soil subsurface regime that is different than that of the pristine system

Agrochemicals in Soil and Environment

M. Naeem, Juan Francisco Jimenez Bremont, Abid Ali Ansari, Sarvajeet Singh Gill, 2022-06-28 This volume *Agrochemicals in Soil and Environment Impacts and Remediation* is a comprehensive collection of important literature on agrochemical contamination The main focus of this book is to point out undesirable changes in biological physical and chemical characteristics of agricultural soils and its impacts on global agricultural crop productivity Soil is one of the important resources of basic needs for our sustenance but due to various anthropogenic activities like urbanization and industrialization the soil is losing its basic quality characteristics Soil microorganisms water holding capacity minerals salts and nutrients are under the direct threat due to agrochemicals therefore agricultural sector is facing a serious challenge Lack of proper knowledge and luxurious applications of agrochemicals resulting into degradation and deterioration of soil quality loss of soil and crop productivity and threatening the food security Therefore it is imperative to develop indices indicators and soil parameters for the monitoring and impact assessment of agricultural contaminants Further biotic and abiotic stresses and their tolerance mechanisms in plants in relation to the soil contaminants such as toxic pollutants heavy metals inorganic and organic matters variety of pesticides insecticides herbicides agricultural runoffs and solid wastes and chemical fertilizers are also highlighted in this volume This book also discusses causes of reduced agriculture productivity and suggests sustainable measures such as plant based technologies bioremediation and nanotechnology that can be used to overcome the crop losses The book is interest to research students teachers agricultural scientists agronomists environmentalists as well as policy makers

Soil Remediation and Plants

Khalid Hakeem, Muhammad Sabir, Munir Ozturk, Ahmet Ruhi Mermut, 2014-08-29 The soil is being contaminated continuously by a large number of pollutants Among them heavy metals are an exclusive group of toxicants because they are stable and difficult to disseminate into non toxic forms The ever increasing concentrations of such pollutants in the soil are considered serious threats toward everyone s health and the environment Many techniques are used to clean eliminate obliterate or sequester these hazardous pollutants from the soil However these techniques can be costly labor intensive and often disquieting Phytoremediation is a simple cost

effective environmental friendly and fast emerging new technology for eliminating toxic heavy metals and other related soil pollutants Soil Remediation and Plants provides a common platform for biologists agricultural engineers environmental scientists and chemists working with a common aim of finding sustainable solutions to various environmental issues The book provides an overview of ecosystem approaches and phytotechnologies and their cumulative significance in relation to solving various environmental problems Identifies the molecular mechanisms through which plants are able to remediate pollutants from the soil Examines the challenges and possibilities towards the various phytoremediation candidates Includes the latest research and ongoing progress in phytoremediation **Advances in Human Growth Hormone Research** Salvatore
