solutions to the ever increasing complexities of real world problems Noise and uncertainty call for probabilistic often Bayesian methods while the huge amount of data in some cases asks for fast heuristic in the sense of suboptimal and ad hoc algorithms able to give answers in acceptable time frames High dimensionality demands linear and non linear dimensionality reduction and feature extraction algorithms while the imprecision and vagueness call for fuzzy reasoning and linguistic variable formalization Nothing impedes real life problems to mix difficulties presenting huge quantities of noisy vague and high dimensional data therefore the design of solutions must be able to resort to any tool of the trade to attack the problem Combining diverse paradigms poses challenging problems of computational and methodological interfacing of several previously incompatible approaches This is thus the setting of HAIS conference series and its increasing success is the proof of the vitality of this exciting field
