Second Creation Makers Of The Revolution:

The Second Creation Robert P. Crease, Charles C. Mann, 1996 *The Second Creation* is a dramatic and human chronicle of scientific investigators at the last frontier of knowledge Robert Crease and Charles Mann take the reader on a fascinating journey in search of unification with brilliant scientists such as Niels Bohr Max Planck Albert Einstein Erwin Schrödinger Richard Feynman Murray Gell-Mann Sheldon Glashow Steven Weinberg and many others They provide the definitive and highly entertaining story of the development of modern physics and the human story of the physicists who set out to find the theory of everything **Second Creation: Makers of the Revolution in Twentieth Century Physics** Robert P.

Crease, Mann Charles C., 1987 **Quantum Generations** Helge Kragh, 2020-06-16 At the end of the nineteenth century some physicists believed that the basic principles underlying their subject were already known and that physics in the future would only consist of filling in the details They could hardly have been more wrong The past century has seen the rise of quantum mechanics relativity cosmology particle physics and solid state physics among other fields These subjects have fundamentally changed our understanding of space time and matter They have also transformed daily life inspiring a technological revolution that has included the development of radio television lasers nuclear power and computers In *Quantum Generations* Helge Kragh one of the world's leading historians of physics presents a sweeping account of these extraordinary achievements of the past one hundred years The first comprehensive one volume history of twentieth century physics the book takes us from the discovery of X rays in the mid 1890s to superstring theory in the 1990s Unlike most previous histories of physics written either from a scientific perspective or from a social and institutional perspective *Quantum Generations* combines both approaches Kragh writes about pure science with the expertise of a trained physicist while keeping the content accessible to nonspecialists and paying careful attention to practical uses of science ranging from compact disks to bombs As a historian Kragh skillfully outlines the social and economic contexts that have shaped the field in the twentieth century He writes for example about the impact of the two world wars the fate of physics under Hitler Mussolini and Stalin the role of military research the emerging leadership of the United States and the backlash against science that began in the 1960s He also shows how the revolutionary discoveries of scientists ranging from Einstein Planck and Bohr to Stephen Hawking have been built on the great traditions of earlier centuries Combining a mastery of detail with a sure sense of the broad contours of historical change Kragh has written a fitting tribute to the scientists who have played such a decisive role in the making of the modern world **Is It Time to Abandon Darwin?** Michael Barber, 2014-07-24 The road to acceptance for the theory of Darwin's Evolution has been a rocky one But today it is under attack more than ever before These attacks are no longer just from the religious arena they are coming from the scientific community and from highly respected individuals This work postulates a new scientific theory Dynamic Evolution the ideas of which are demonstrated to be superior to the precepts of Darwin's theories This is not a religious or philosophical approach You will

find within these pages a sound scientifically based theory that will have no less an effect than to put the final nail in the coffin of Darwinian Evolution This book offers a comprehensive challenge to the Darwinian premise that the diversity of life is explained solely by the natural selection and survival of the fittest It will become apparent from a complete study of this work that the principles of Darwinian Evolution fall under the shadow of the complete picture provided by Dynamic Evolution

Twentieth-Century Multiplicity Daniel H. Borus, 2011-12-12 The book describes the ways in which American thinkers and artists in the first two decades of the twentieth century challenged notions that a single principle explained all relevant phenomena opting instead for a pluralistic world in which many truths goods and beauties coexisted It argues that the bracketing of the idea that all knowledge was integrated allowed for a new appreciation of the importance of context and contingency

The Scientific 100 John Simmons, Lynda Simmons, 2000-09-01 Who are the great scientists throughout the ages and what exactly did they do to earn their importance From Archimedes to Newton to Einstein to Hawking The Scientific 100 provides the fascinating answers Vivid biographical sketches chronicle the lives and accomplishments of the world's preeminent scientists And in the tradition of the Citadel Press 100 Series they are ranked provocatively in order of influence an inspiration for lively discussion This unique volume is a browser's treasure trove and a handy reference for the general reader John Simmons has been associated with Current Biography for more than fifteen years He has written frequently about Nobel laureates in science A member of the New York Academy of Sciences he divides his time between New York City and Paris

Quantum Space Jim Baggott, 2018-11-08 Today we are blessed with two extraordinarily successful theories of physics The first is Albert Einstein's general theory of relativity which describes the large scale behaviour of matter in a curved spacetime This theory is the basis for the standard model of big bang cosmology The discovery of gravitational waves at the LIGO observatory in the US and then Virgo in Italy is only the most recent of this theory's many triumphs The second is quantum mechanics This theory describes the properties and behaviour of matter and radiation at their smallest scales It is the basis for the standard model of particle physics which builds up all the visible constituents of the universe out of collections of quarks electrons and force carrying particles such as photons The discovery of the Higgs boson at CERN in Geneva is only the most recent of this theory's many triumphs But while they are both highly successful these two structures leave a lot of important questions unanswered They are also based on two different interpretations of space and time and are therefore fundamentally incompatible We have two descriptions but as far as we know we've only ever had one universe What we need is a quantum theory of gravity Approaches to formulating such a theory have primarily followed two paths One leads to String Theory which has for long been fashionable and about which much has been written But String Theory has become mired in problems In this book Jim Baggott describes Making Starships and Stargates James F. Woodward, 2012-12-15 To create the exotic materials and technologies needed to make stargates and warp drives is the holy grail of advanced propulsion A less ambitious but nonetheless revolutionary goal is

finding a way to accelerate a spaceship without having to lug along a gargantuan reservoir of fuel that you blow out a tailpipe Tethers and solar sails are conventional realizations of the basic idea There may now be a way to achieve these lofty objectives Making Starships and Stargates will have three parts The first will deal with information about the theories of relativity needed to understand the predictions of the effects that make possible the propulsion techniques and an explanation of those techniques The second will deal with experimental investigations into the feasibility of the predicted effects that is do the effects exist and can they be applied to propulsion The third part of the book the most speculative will examine the question what physics is needed if we are to make wormholes and warp drives Is such physics plausible And how might we go about actually building such devices This book pulls all of that material together from various sources updates and revises it and presents it in a coherent form so that those interested will be able to find everything of relevance all in one place

Cosmic Anger Gordon Fraser, 2008-04-24 Biography of Abdus Salam the first citizen of Pakistan to win a Nobel Prize who was nevertheless branded as a heretic and excommunicated from his home country where his achievements are often overlooked even besmirched Instead he acted out his dreams on a wider stage as a citizen of the world

Long Hard Journey: The Story of Relativity John R. Matthews, 2015-05-15 Long Hard Journey begins in ancient Greece where science originated 2000 years ago From the advances made in physics since the days of philosopher scientists like Pythagoras and Aristotle key breakthroughs are laid out these shed a very bright light on the postulates and laws of Einstein's theory of relativity The scientific psyche is on display too with the reader seeing the biting vindictiveness of a Sir Isaac Newton the despair of the reluctant revolutionary Max Planck and the utter astonishment of men like James Clerk Maxwell and Ernest Rutherford Physics is thus shown to be high drama instead of the tedious march toward the truth that it is oft perceived to be Grab this delightful little primer if you've never quite gotten the gist of relativity before Take it home and partake of the drama

The Particle at the End of the Universe Sean Carroll, 2013-08-27 The Higgs boson is the key to understanding why mass exists and how atoms are possible After billions of dollars and decades of effort by more than six thousand researchers at the Large Hadron Collider in Switzerland a doorway is opening into the mind boggling world of dark matter and beyond Caltech physicist and acclaimed writer Sean Carroll explains both the importance of the Higgs boson and the ultimately human story behind the greatest scientific achievement of our time Publisher

Defining Science Charles Alan Taylor, 1996 The most interesting entry point to the demarcation problem in science since Popper's seminal formulation Steve Fuller Professor of Sociology Social Policy Durham University What is science What isn't science And who draws the line between them These are rhetorical concerns as Charles A Taylor demonstrates in this ambitious book about the theoretical and cultural underpinnings of scientific practice By showing how boundaries between science and nonscience are rhetorically constructed and socially enforced *Defining Science* reveals the political and philosophical significance of such distinctions Taylor examines the traditional demarcation problem the problem of defining the boundaries of science as an

ongoing rhetorical negotiation involving a full range of historical interests and social actors from researchers and lab technicians to governmental and industrial patrons program administrators political representatives journalists and educators His case studies of the recent debates over creationism and cold fusion clearly demonstrate how the rhetorical dynamics of science operate within different fields In both cases presented here with concision and insight prevailing demarcations or defining portrayals of science emerge as far more nuanced than traditional accounts allow Taylor analyzes traditional approaches to demarcation in science in order to incorporate their insights into his larger rhetorical view His reformulation of philosophical historical and sociological accounts of science clearly illustrates the intellectual value of an interdisciplinary rhetoric of demarcation Furthermore Defining Science suggests how we as a community can positively influence future constructions of science and society This book confronts what is arguably the late twentieth century's definitive problem in a provocative and interesting way It will be of interest to anyone engaged with the question of knowledge in public life Charles Arthur Willard Professor and Chair of the Department of Communication University of Louisville

Spying on the Bomb: American Nuclear Intelligence from Nazi Germany to Iran and North Korea Jeffrey Richelson, 2007-09-17 Spying on the Bomb focuses on the past present nuclear activities of various countries intermingling what the US believed was happening with accounts of what actually occurred in each country's laboratories test sites and decision making councils

wrestles with his politics and plumbs his personal passions with a telling instinct for the revealing underside of a life lived so publicly Los Angeles Times Carl Sagan was one of the most celebrated scientists of this century the handsome and alluring visionary who inspired a generation to look to the heavens and beyond His life was both an intellectual feast and an emotional rollercoaster Based on interviews with Sagan's family and friends including his widow Ann Druyan his first wife acclaimed scientist Lynn Margulis and his three sons as well as exclusive access to many personal papers this highly acclaimed life story offers remarkable insight into one of the most influential provocative and beloved figures of our time a complex contradictory prophet of the Space Age *Peace & War* Robert Serber, Robert P. Crease, 1998 The memoir of a prominent member of the Manhattan Project and an intimate friend of J Robert Oppenheimer Jacket **Einstein's Dice and Schrödinger's Cat** Paul Halpern, 2015-04-14 When the fuzzy indeterminacy of quantum mechanics overthrew the orderly world of Isaac Newton Albert Einstein and Erwin Schrödinger were at the forefront of the revolution Neither man was ever satisfied with the standard interpretation of quantum mechanics however and both rebelled against what they considered the most preposterous aspect of quantum mechanics its randomness Einstein famously quipped that God does not play dice with the universe and Schrödinger constructed his famous fable of a cat that was neither alive nor dead not to explain quantum mechanics but to highlight the apparent absurdity of a theory gone wrong But these two giants did more than just criticize they fought back seeking a Theory of Everything that would make the universe seem sensible again In Einstein's Dice and Schrödinger's Cat physicist Paul Halpern tells the little known story of how Einstein and Schrödinger searched first as collaborators and then as competitors for a theory that transcended quantum weirdness This story of their quest which ultimately failed provides readers with new insights into the history of physics and the lives and work of two scientists whose obsessions drove its progress Today much of modern physics remains focused on the search for a Theory of Everything As Halpern explains the recent discovery of the Higgs Boson makes the Standard Model the closest thing we have to a unified theory nearly complete And while Einstein and Schrödinger failed in their attempt to explain everything in the cosmos through pure geometry the development of string theory has in its own quantum way brought this idea back into vogue As in so many things even when they were wrong Einstein and Schrödinger couldn't help but get a great deal right
