Structures and Architecture Paulo J. Cruz, 2013-06-27 Although the disciplines of architecture and structural engineering have both experienced their own historical development their interaction has resulted in many fascinating and delightful structures To take this interaction to a higher level there is a need to stimulate the inventive and creative design of architectural structures and to persuade *Louis I. Kahn - Exposed concrete and hollow stones* Roberto Gargiani, 2014-07-09 Through sheer determination and courage Kahn has researched the nature of concrete in the form of precast cast in place or blocks Each of his renowned works in exposed concrete such as the Yale Art Gallery the Richards Laboratories the Bath House the Salk Institute the National Assembly the Kimbell Museum the Exeter Library and the Yale Center for British Art is itself an important chapter in the history of architecture for the exploration into concrete's formal expression beyond the lesson of Le Corbusier Kahn's obsession on concrete fabrication processes on the formwork and the mix design is systematically examined in two volumes The authors illustrate Kahn's vision with documents that have never been revealed in other essays drawing heavily from original sketches plans specifications worksite photographs and correspondences with collaborators engineers technicians and contractors The first volume *Exposed Concrete and Hollow Stones* focuses on the first ten year period of Kahn's research on concrete Moving through the many construction systems experienced by Kahn from the discovery of exposed concrete in the form of *b ton brut* at the Yale Art Gallery to the precast and poured in place techniques to the values of joint growth and ornament the essay culminates in the reconstruction of the artistic and technical characteristics of two great worksite the Richards Laboratories and the First Unitarian Church and School The second volume *Towards the Zero Degree of Concrete* covers the following fourteen years and leads the reader along Kahn's path to the true nature of concrete focusing on his main techniques and poetic discoveries such as the liquid stone of the Salk Institute the smooth finish at Bryn Mawr and the concept of monolithic at the Yale Center for British Art

Constructing Building Enclosures Clifton Fordham, 2020-07-21 Constructing Building Enclosures investigates and interrogates tensions that arose between the disciplines of architecture and engineering as they wrestled with technology and building cultures that evolved to deliver structures in the modern era At the center of this history are inventive architects engineers and projects that did not settle for conventional solutions technologies and methods Comprised of thirteen original essays by interdisciplinary scholars this collection offers a critical look at the development and the purpose of building technology within a design framework Through two distinct sections the contributions first challenge notions of the boundaries between architecture engineering and construction The authors then investigate twentieth century building projects exploring technological and aesthetic boundaries of postwar modernism and uncovering lessons relevant to enclosure design that are typically overlooked Projects include Louis Kahn's Weiss House Minoru Yamasaki's Science Center Sigurd Lewerentz's Chapel of Hope and more An important read for students educators and researchers within architectural history construction history building technology and design this volume sets out to disrupt common assumptions of how we understand this history

Louis I. Kahn in Rome and Venice Elisabetta Barizza, 2021-07-22 This book examines the idea of organism in the work of Louis I Kahn from the turning point of Rome to the project for Venice It presents an original interpretation of the work of Kahn during one of the most fruitful periods of his career when he was working on a particular design method based on an entirely novel way of interacting with the past Beginning with a meticulous documentation and analysis of Kahn's experiences in the twenty years from 1930 to 1950 the book sheds new light on the relationship between Kahn's work and the modern movement The arguments are supported by case studies including that of the Palazzo dei Congressi in Venice based on Kahn's words like his lessons in Venice at IUA International University of Art in 1971 and others as the Trenton Bath House the Salk Institute La Jolla the Kimbell Museum Fort Worth the Yale Gallery and the Mellon Center for British Art New Haven and more Unlike much of the by now well established literature on Kahn's work *Louis I Kahn in Rome and Venice* suggests that the basic premise of Kahn's invention is the idea of spatial constructive organism which explains how he created forms that were inextricably anchored in the past without imitating any one kind of ancient architecture The main objective of the book is to explain Kahn's methodology to architects and students showing how he was able to design an architectural object with the characteristics of the best designed objects organisms in which each part contributes with the whole to creating something made of indivisible parts

The Collaborators: Interactions in the Architectural Design Process Gilbert Herbert, Mark Donchin, 2016-03-23 Illustrated by critical analyses of significant buildings including examples by such eminent architects as Adler and Sullivan Erich Mendelsohn and Louis Kahn this book

examines collaboration in the architectural design process over a period ranging from the mid 19th century to the late 1960s. The examples chosen located in England, the United States, Israel, and South Africa are of international scope. They have intrinsic interest as works of architecture and illustrate all facets of collaboration involving architects, engineers, and clients. Prior to dealing with the case studies, the theoretical framework is set in three introductory essays which discuss in general terms the organizational implications of partnerships, associations, and teams; the nature of interactions between architect and engineer; and cooperation and confrontation in the relationship between architect and client. From this original standpoint, the interactive role of the designers is examined and reinterpreted. Such well-known buildings as the Chicago Auditorium and the Kimbell Art Museum, the re-evaluation of St Pancras Station and its hotel, questions common presumptions about the separation of professional roles played by its engineer and architect. The account of the troubled history of Mendelsohn's project for the first Haifa Power House highlights the difficulties that arise when a determined and eminent architect confronts a powerful and demanding client. In a later era, the examination of the John Moffat Building, which is less well known but deserving of wider recognition, reveals how the fruitful collaboration of multiple architects can result in a successful unified design. These case studies comprise a wide range of programmes, challenges, personalities, and interactions. Ultimately, in five different ways, in five different epochs, and in five different circumstantial and cultural contexts, this book shows how the dialogue between the players in the design process resonates up to the present.

Structures by Design Rob Whitehead, 2019-07-19 Winner of the 2021 TAA Textbook Excellence Award, Honorable Mention of the 2021 BTES Book Award. *Structures by Design: Thinking, Making, Breaking* is a new type of structures textbook for architects who prefer to learn using the hands-on creative problem-solving techniques typically found in a design studio. Instead of presenting structures as abstract concepts defined by formulas and diagrams, this book uses a project-based approach to demonstrate how a range of efficient, effective, and expressive architectural solutions can be generated, tested, and revised. Each section of the book is focused on a particular manner by which structural resistance is provided: Form, Arches, and Cables; Sections, Beams, Slabs, and Columns; Vectors, Trusses, and Space Frames; Surfaces, Shells, and Plates; and Frames, Connections, and High Rises. The design exercises featured in each chapter use the Think-Make-Break method of reiterative design to develop and evaluate different structural options. A variety of structural design tools will be used, including the human body, physical models, historical precedents, static diagrams, traditional formulae, and advanced digital analysis. The book can be incorporated into various course curricula and studio exercises because of the flexibility of the format and range of expertise required for these explorations. More than 500 original illustrations and photos provide example solutions and inspiration for further design exploration.

Conservation of Modern Architecture Susan Macdonald, Kyle C. Normandin, Bob Kindred, 2015-12-08 The importance of protecting significant buildings from decay and destruction would seem to be undeniable. Yet whilst the majority of buildings of merit constructed before the Second World War have been highlighted as worthy of protection, there

is much indifference and in some cases hostility towards many important post war buildings These deserve to receive wider formal recognition but in many cases continue to be mistreated or even demolished This book examines many of the philosophical and practical issues surrounding the conservation of modern buildings and also the problems faced by building practitioners in dealing with buildings constructed in a wider range of styles and materials than at any other time Climate change in particular has forced change in the way in which we think about buildings with the pressures to address issues of energy efficiency becoming more urgent and likely to have consequences that may alter the perceived architectural and historic interest of modern and traditional buildings alike *Air-Conditioning in Modern American Architecture, 1890-1970*

Joseph M. Siry, 2021-02-01 *Air Conditioning in Modern American Architecture 1890 1970* documents how architects made environmental technologies into resources that helped shape their spatial and formal aesthetic In doing so it sheds important new light on the ways in which mechanical engineering has been assimilated into the culture of architecture as one facet of its broader modernist project Tracing the development and architectural integration of air conditioning from its origins in the late nineteenth century to the advent of the environmental movement in the early 1970s Joseph M Siry shows how the incorporation of mechanical systems into modernism s discourse of functionality profoundly shaped the work of some of the movement s leading architects such as Dankmar Adler Louis Sullivan Frank Lloyd Wright Ludwig Mies van der Rohe Gordon Bunshaft and Louis Kahn For them the modernist ideal of functionality was incompletely realized if it did not wholly assimilate heating cooling ventilating and artificial lighting Bridging the history of technology and the history of architecture Siry discusses air conditioning s technical and social history and provides case studies of buildings by the master architects who brought this technology into the conceptual and formal project of modernism A monumental work by a renowned expert in American modernist architecture this book asks us to see canonical modernist buildings through a mechanical engineering oriented lens It will be especially valuable to scholars and students of architecture modernism the history of technology and American history **Studies in Construction History: the proceedings of the Second Construction History Society**

Conference James Campbell, Karey Draper, Amy Boyington, Gabriel Byng, Amy DeDonato, Wendy Andrews, 2015 The proceedings of second conference of the Construction History Society which took place on 20 and 21 March 2015 at Queens College Cambridge featuring 28 peer reviewed papers covering a wide variety of subjects on the theme of construction history *Design-Tech: Building Science for Architects* Jason Alread, Thomas Leslie, Rob Whitehead, 2025-03-19 The third edition of Design Tech provides an indispensable holistic resource for integrating building technologies into critically designed performance based architectural projects The book s format follows the developmental stages of a typical architectural project it provides a step by step process for addressing and integrating building sciences from first principles of human comfort materials structures and environmental systems to advanced construction systems and measures of building performance Short chapters incorporate easy to understand information with hundreds of useful illustrations tables

and references that explain the why as well as the how of building science The content focuses on what designers need to know in the studio to create sustainably designed integrated buildings and it prepares them for future discussions with engineers contractors and consultants The updated format builds a coherent framework for integrated project design studio development necessary for all contemporary accredited schools of architecture Chapters build upon critical project information from schematics toward technical integration New chapters emphasize performance based design strategies including sustainable design values critical schematic planning enhanced building envelope design strategies and advanced performance systems Enhanced visualization of schematic design strategies helps explain sustainable design standards code compliance and structural schematics and throughout the third edition focuses on contemporary issues such as embodied carbon heavy timber construction life cycle costs and long term performance This will be a must read for all architecture students looking for an accessible guide to building science
