Skobel tsvn,2013-03-09 **Volume 25: Optical Methods** of Investigating Solid Bodies D. V. Skobel tsyn, 2013-04-17 The principal results of the work are as follows 1 A simplified technique was devised for obtaining Raman spectra of powders 2 The Raman and infrared absorption spectra of the following oxides were investigated AsP3 SbP3 As 0 SbP5 Te02 Ge02 two forms in the crystalline state and ASP3 Ge02 Te0 in the glassy state 2 5 2 3 The vibrational spectra of the crystalline and glassy forms of the oxides ASP3 Ge02 Te02 are similar in many main respects indicating a similarity of their structural units which determine the vibrational spec tra of these substances 4 By a study of the vibrational spectrum it was shown that arsenious anhydride has a molecular structure and consists of As0 molecules having symmetry of the point group Td The force constants and vibration fre 4 6 guencies of the As 0 molecule were calculated and the vibrational spectrum of arsenious anhydride was re 4 6 liably interpreted with the aid of these results 5 A similar result was obtained for antimonous anhydride consisting of Sb0 molecule s with symmetry 4 6 of the point group Td The force constants for this molecule were found and the vibrational spectrum was calculated **Developments in Quantum Cosmology Research** Albert Reimer, 2005 Horizons in World Physics Volume 247 New Developments in Quantum Cosmology Research Inelastic Light Scattering in Crystals Mikhail Mikhailovich Sushchinskiĭ,1989 Translation from the 1987 Russia edition These proceedings address issues in solid state optics and physics Raman scattering in crystals and dispersive media Rayleigh and inelastic scattering with phase transitions the features of ferroelectrics in connection with the general concept of soft mod **Instabilities of Relativistic Electron** Beam in Plasma Valery B. New Topics in Theoretical Physics Henk F. Arnoldus, Thomas F. George, 2007 Although the various branches of physics differ in their experimental methods and theoretical approaches certain general principles apply to all of them The forefront of contemporary advances in physics lies in the submicroscopic regime whether it be in atomic nuclear condensed matter plasma or particle physics or in quantum optics or even in the study of stellar structure All are based upon quantum theory i e quantum mechanics and quantum field theory and relativity which together form the theoretical foundations of modern physics Many physical quantities whose classical counterparts vary continuously over a range of possible values are in quantum theory constrained to have discontinuous or discrete values. The intrinsically deterministic character of classical physics is replaced in quantum theory by intrinsic uncertainty According to quantum theory electromagnetic radiation does not always consist of continuous waves instead it must be viewed under some circumstances as a collection of particle like photons the energy and momentum of each being directly proportional to its frequency or inversely proportional to its wavelength the photons still possessing some wavelike characteristics This book presents state of the art research from around the world Quantum Cosmology Research Trends Albert Reimer, 2005 Research in Ouantum Field Theory Vladimir Ivanovich Man'ko,1996 Research In Quantum Field Theory On the Structure of Physical Vacuum and a New Interaction in Nature (theory, Experiment, Applications) I∏U∏. A. Baurov, 2000 In the book an unconventional physical model of creation of the observed physical space from a finite set of special discrete objects byuons is presented The global space anisotropy associated with a cosmological vectorial potential appearing in the definition of byuons as well as a new interaction due to this anisotropy are predicted Results of an experimental investigation of the proposed new interaction are given A new method of power production based on the new interaction as well as a new principle of motion of objects in nature with the use of physical space as a support medium are advanced The book is intended for the general reading public physicists theorists and experimenters astrophysicists engineers specialists in space technology and power engineering and physical students Astrophysics and Condensed Matter Thomas G. Igor' Il'ich Sobel'man,1992 Eight highly technical studies explore a wide range of problems involved in investigating the short wavelength emission of the solar corona The topics include the experimental results from solar X ray investigations the calculated excitation cross sections for collisions of atoms and ions with charged particles and spectra of plasmas Annotation

Generalized Functions in Mathematical Physics A. S. Demidov, 2001 This important book gives an interconnected presentation of some basic ideas concepts results of the theory of generalised functions first of all in the framework of the theory of distributions and equations of mathematical physics A part of the material is given according to the scheme definition theorem proof This scheme is convenient for presenting results in clear and concentrated form However it seems reasonable to give a student the possibility not only to study a priori given definitions and proofs of theorems but also to discover them while considering the problems involved A series of sections serve this purpose Moreover a part of the material is given as exercises and problems Theoretical Physics 2002 Thomas F. George, Henk F. Arnoldus, 2002 This book provides a representative sampling of the latest advances in theoretical physics Chapters 1 and 2 deal with the Hydrogen atom In Chapter 1 Blaive and Cadilhac carry out an analysis of hydrogenoid atomic wave functions In Chapter 2 Boudet Blaive Geniyes and Vanel carry out a relativistic calculation with retardation of the photoelectric effect of Hydrogen Chapters 3 and 4 look at atoms in the presence of an external radiation field Chapter 3 by Dastidar and Dastidar examines above threshold ionisation of Argon in a laser field In Chapter 4 Kazakov applies the Jaynes Cummings model to an atom interacting simultaneously with a quasiresonant classical field and a quantised mode Quantum dynamical problems are addressed in Chapters 5 and 6 In Chapter 5 Baute Egusquiza and Muga study the effect of negative and classically forbidden momenta in one dimensional quantum scattering Chapter 6 by Bellini finds analytical solutions to reaction diffusion equations by mapping on a time independent Schr dinger equation Chapters 7 and 8 are devoted to nuclear and particle physics In Chapter 7 Kravchenko and Soznik obtain the nucleon nucleus optical potential in the nuclear matter approximation with the generalised Skyrme interaction In Chapter 8 Terasaki examines non factorisable contributions in

decays The final three chapters contain various mathematical studies which are of interest to theoretical physics in general In Chapter 9 Shiqing analyses the equations of motion for the Newtonian n body problem Riazi looks at the geometry and topology of solitons in Chapter 10 and the book concludes with Chapter 11 containing a study by Elipe of the rotations of perturbed triaxial rigid bodies — Quantum Dots Peter A. Ling,2005 A quantum dot is a particle of matter so small that the addition or removal of an electron changes its properties in some useful way All atoms are quantum dots but multi molecular combinations can have this characteristic In biochemistry quantum dots are called redox groups In nanotechnology they are called quantum bits or qubits Quantum dots typically have dimensions measured in nanometers where one nanometer is 10 9 meter or a millionth of a millimetre The fields of biology chemistry computer science and electronics are all of interest to researchers in nanotechnology Other applications of quantum dots include nanomachines neural networks and high density memory or storage media Research is being carried out on nano crystals self assembled dots and gated structures This book presents leading edge research from around the world
