*Machine Tool Design* N. Acherkan, 2000 Volume 2 of the fundamental work *Machine Tool Design* contains Parts Three and Four The complete work is to be published in four volumes Part Three deal with the kinematics of machine tools This branch of machine tool design has been strictly systematized by the author and is set forth with exceptional clarity The kinematic structures of a great many different types of machine tools including the most complex gear cutting machines are analyzed by methods developed in the text which take into consideration the interrelations between the workpiece to be produced in the given machine tool the cutting tool to be used the selected processing method and the kinematic structure of the machine tool Part Three was written by Professor A Fedotyonok whose investigations in this field are well known to all Soviet machine tool designers Part Four takes up hydraulic drives of machine tools It contains all the theoretical and practical data required in the application of fluid power and control systems to machine tools Part Four was written by Associate Professor V Yermakov who lectures on the subject at the Machine Tool Engineering Institute in Moscow

**Machine Tool Design Volume 1** N. Acherkan, 1968      **Analysis of Material Removal Processes** Warren R. DeVries, 2012-12-06 Metal removal processes cutting and grinding in this book are an integral part of a large number of manufacturing systems either as the primary manufacturing process or as an important part of preparing the tooling for other manufacturing processes In recent years industry and educational institutions have concentrated on the metal removal system perhaps at the expense of the process This book concentrates on metal removal processes particularly on the modeling aspects that can either give a direct answer or suggest the general requirements as to how to control improve or change a metal removal process This modeling knowledge is more important with automated computer controlled systems than it has ever been before because quantitative knowledge is needed to design and operate these systems This senior undergraduate graduate textbook is aimed at providing the quantitative knowledge often times at an elementary level for handling the technological aspects of setting up and operating a metal removal process and interpreting the experience of planning operating and improving a metal removal process based on rule of thumb approaches      **MACHINE tool design. 1 vol** O. TRIFONOV, 2000      *Simulation and Tool Path Optimization for the Hexapod Milling Machine* Shangjian Du, 2005 To fully exploit the advantages of multi axis machining in a modern production environment new types of parallel kinematic machines PKM and new processing technologies such as those using high speed cutting HSC are needed However the machining accuracy and hence the process reliability of PKM are still not satisfactory when using today s CAM systems due to the complexity of the dynamic behavior of machine axes A hybrid simulation method for optimizing tool paths that overcomes the limits of today s CAM systems is presented in this work Two major independent simulations were performed to examine the influences on the quality of the final product It is shown that the kinematics the dynamics and the stiffness are important factors affecting the accuracy of PKM These factors can be taken into account to obtain an accurate modeling
