The 'Creed of Science' in Victorian England Roy M. MacLeod, 2024-10-28 The nineteenth century which saw the triumph of the idea of progress and improvement saw also the triumph of science as a political and cultural force In England as science and its methods claimed privilege and space its language acquired the vocabulary of religion The new creed of science embraced what John Tyndall called the scientific movement it was in the language of T H Huxley a militant creed The march of invention the discoveries of chemistry and the wonders of steam and electricity culminated in a crusade against ignorance and unbelief It was a creed that looked to its own apostolic succession from Copernicus Galileo and the martyrs of the scientific revolution Yet it was a creed whose doctrines were divisive and whose convictions resisted Alongside arguments for materialism utility positivism and evolutionary naturalism persisted reservations about the nature of man the role of ethics and the limits of scientific method These essays discuss leading strategists in the scientific movement of late Victorian England At the same time they show how science established served not only the scientific community but also the interests of imperial and colonial powers

It explores the American class system, the linked histories of Detroit and its auto and music industries, the city's changing racial dynamics, the rising power of television, and how all of it played into the NFL's transformation from a fall sport into the multi-billion dollar year-round entertainment behemoth that is a cornerstone of American popular culture. **Justice Duty**
