Dhillon, 2016-04-19 During day to day use thousands of lives are lost each year due to accidents directly or indirectly resulting from poor transportation system reliability and safety In the United States automobile accidents alone

result in around 42 000 deaths per year costing billions of dollars to the economy each year A common subject in journal articles

The Aerodynamics of a Container Freight Train David Soper, 2016-05-10 This outstanding thesis characterises the aerodynamic flow around a container freight train investigating how changing container loading configurations affect the magnitude of aerodynamic forces measured on a container 1 25th scale moving model freight train experiments were carried out at the University of Birmingham's TRAIN rig facility to investigate slipstream velocities and static pressure as well as measuring using a specifically designed on board pressure monitoring system the aerodynamic loads on containers Results were compared with full scale data and assessed in terms European standards for trackside worker and passenger safety limits Rail vehicle aerodynamic studies have tended to previously focus on high speed passenger trains in line with increases in train speed The research presented within this thesis highlights the issues associated with the aerodynamic development around a freight train providing the foundations for further research and a basis from which to develop international safety standards in relation to freight as well as high speed trains

Handbook of Research on Emerging Innovations in Rail Transportation Engineering Rai, B. Umesh, 2016-05-31 The rail based transit system is a popular public transportation option not just with members of the public but also with policy makers looking to install a form of convenient and rapid travel Even for moving bulk freight long distances a rail based system is the most sustainable transportation system currently available The Handbook of Research on Emerging Innovations in Rail Transportation Engineering presents the latest research on next generation public transportation infrastructures Emphasizing a diverse set of topics related to rail based transportation such as funding issues policy design traffic planning and forecasting and engineering solutions this comprehensive publication is an essential resource for transportation planners engineers policymakers and graduate level engineering students interested in uncovering research based solutions recommendations and examples of modern rail transportation systems

highlight some of the key issues facing the research community

High-Speed Rail in Poland Andrzej

Zurkowski, 2018-07-24 The Railway Research Institute Instytut Kolejnictwa in Warsaw was established in 1951 and was until 2000 part of the Polish State Railways PKP. At present it serves as an independent entity; it is subordinated to the minister responsible for transport. Since its inception the Institute has been the centre of competence for technology, technique and organization of operation and services in rail transport, particularly in respect to innovation. One of its fundamental tasks also includes activities connected with safety, which are carried out in close cooperation with the National Safety Authority, i.e. the Office of Rail Transport. At the same time the Institute participated in the process of upgrading and modernization of the rail network in Poland. Experience in high speed rail gained as a result of international cooperation and basing on the effort to increase speed on railway lines in Poland so far 200 km/h is included in the monograph *Koleje Dużych Prędkości w Polsce* High Speed Rail in Poland published in 2015 for the benefit of the Polish reader. This monograph aims at reaching an international audience of experts so as to present Polish determinants of HSR implementation. In order to elaborate this monograph apart from specialists from the Railway Research Institute experts from other research and academic centres were invited. Not only presenting a wide range of problems connected with future construction of High Speed Lines in Polish conditions but also a number of operational ones. The authors have created a reference work of universal character solving problems in order to build and operate high speed rail systems in countries on a similar level of development as Poland. Features providing requirements for design and upgrade of engineering works on High Speed Rail, development information on restructuring and building railway lines for countries starting to develop a High Speed Rail system, dealing with organizational engineering, socioeconomic and economic demands for transport services and the formation of human resources for constructing and operating a High Speed Rails system. Presenting these problems on the international arena will facilitate future cooperation and application of world experience to create HSR in Poland and integrate the Polish HSR network into the international one.
