Lugo, Carol Lowe, 2012-12-06 Forestry professors used to remind students that whereas physicians bury their mistakes foresters die before theirs are noticed But good institutions live longer than the scientists who contribute to building them and the half century of work of the USDA Forest Service s Institute of Tropical Forestry ITF is in plain view an unprecedented corpus of accomplishments that would instill pride in any organization There is scarcely anyone interested in current issues of tropical forestry who would not benefit from a refresher course in ITF s findings its early collaboration with farmers to establish plantations its successes in what we now call social forestry its continuous

improvement of nursery practices its screening trials of native species its development of wood processing technologies appropriate for developing countries its thorough analysis of tropical forest function and its holistic approach toward conservation of endangered species Fortunately ITF has a long history of information exchange through teaching like many others I got my own start in tropical forest ecology from just such a course in Puerto Rico And long before politicians recognized the global importance of tropical forestry the ITF staff served actively as ambassadors of the discipline visiting tropical countries everywhere to learn and when invited to do so to help solve local problems It is a general principle of biogeography that species turnover rates on islands are higher than those on continents Inevitably the same is true of scientists assigned to work on islands **Earth Notes** ,1991 *Water and the Rainforest in Malaysian Borneo* Ian Douglas,2022-01-01 This volume synthesizes and analyzes thirty years of hydrological research in the Danum Valley Conservation Area a lowland dipterocarp rainforest in Sabah Malaysia Ian Douglas explores the role of water in the rainforest ecosystem setting out the ecological climatological and geological context of present day hydrological processes soil erosion and stream sedimentation He emphasizes the role of extreme events and natural disturbances in sediment supplies and the evolution of drainage pathways and explains the pathways of rainfall and stream sediment Douglas then explores the impacts caused by logging the extreme pulses of sedimentation and the effects of log removal and logging road construction examining the effects of major storms in the 20 years after tree harvesting Methods of minimizing logging damage to soils and streams are discussed and the effects on flora and fauna are considered
