Semiconductor-Based Heterostructures: Interfacial Structure and Stability; Proceedings of the Northeast Regional Meeting of the Metallurgical Society, Sponsored by the New Jersey Chapter and the Materials Research Society, held at AT&T Bell Laboratories, Murray Hill, Metallurgical Society, Sponsored by the New Jersey Chapter and the Materials Research Society, held at AT&T Bell Laboratories, Murray Hill, New Jersey, May 1-2, 1986 ML Green (Ed), 1986 Physics Briefs ,1993 The Physics and Chemistry of Carbides, Nitrides and Borides R. Freer, 2012-12-06 Carbides nitrides and borides are families of related refractory materials Traditionally they have been employed in applications associated with engineering ceramics where either high temperature strength or stability is of primary importance In recent years there has

been a growing awareness of the interesting electrical thermal and optical properties exhibited by these materials and the fact that many can be prepared as monolithic ceramics single crystals and thin films In practical terms carbides nitrides and borides offer the prospect of a new generation of semiconductor materials for example which can function at very high temperatures in severe environmental conditions However as yet we have only a limited understanding of the detailed physics and chemistry of the materials and how the preparation techniques influence the properties Under the auspices of the NATO Science Committee an Advanced Research Workshop ARW was held on the Physics and Chemistry of Carbides Nitrides and Borides University of Manchester 18 22 September 1989 in order to assess progress to date and identify the most promising themes and materials for future research An international group of 38 scientists considered developments in 5 main areas The preparation of powders monolithic ceramics single crystals and thin films Phase transformations microstructure defect structure and mass transport Materials stability Theoretical studies Electrical thermal and optical properties of bulk materials and thin films

Materials Science in Microelectronics I Eugene Machlin, 2010-07-07 Thin films play a key role in the material science of microelectronics and the subject matter of thin films divides naturally into two headings processing structure relationship and structure properties relationship The first volume of Materials Science in Microelectronics focuses on the first relationship that between processing and the structure of the thin film The state of the thin film s surface during the period that one monolayer exists before being buried in the next layer determines the ultimate structure of the thin film and thus its properties This volume takes into consideration the following potential influencing factors crystal defects void structure grain structure interface structure in epitaxial films the structure of amorphous films and reaction induced structure An ideal text or reference work for students and researchers in material science who need to learn the basics of thin films

Characterization of Semiconductor Heterostructures and Nanostructures Giovanni Agostini, Carlo Lamberti, 2013-04-11 Characterization of Semiconductor Heterostructures and Nanostructures is structured so that each chapter is devoted to a specific characterization technique used in the understanding of the properties structural physical chemical electrical etc of semiconductor quantum wells and superlattices An additional chapter is devoted to ab initio modeling The book has two basic aims The first is educational providing the basic concepts of each of the selected techniques with an approach understandable by advanced students in Physics Chemistry Material Science Engineering Nanotechnology The second aim is to provide a selected set of examples from the recent literature of the TOP results obtained with the specific technique in understanding the properties of semiconductor heterostructures and nanostructures Each chapter has this double structure the first part devoted to explain the basic concepts and the second to the discussion of the most peculiar and innovative examples The topic of quantum wells wires and dots should be seen as a pretext of applying top level characterization techniques in understanding the structural electronic etc properties of matter at the nanometer and even sub nanometer scale In this respect it is an essential reference in the much broader and extremely hot

field of Nanotechnology Comprehensive collection of the most powerful characterization techniques for semiconductors heterostructures and nanostructures Most of the chapters are authored by scientists that are world wide among the top ten in publication ranking of the specific field Each chapter starts with a didactic introduction on the technique The second part of each chapters deals with a selection of top examples highlighting the power of the specific technique to analyse the properties of semiconductors heterostructures and nanostructures

Kinetics of Ordering and Growth at Surfaces Max G. Lagally,2012-12-06 This volume contains the papers presented at the NATO Advanced Research Workshop on Kinetics of Ordering and Growth at Surfaces held in Acquafredda di Maratea Italy September 18 22 1989 The workshop s goal was to bring together theorists and experimentalists from two related fields surface science and thin film growth to highlight their common interests and overcome a lack of communication between these two communities Typically surface scientists are only concerned with the microscopic atomic description of solids within one monolayer of the surface Thin film growers are usually considered more empirical in their approach concerned primarily with the quality of their product and have not necessarily found it useful to incorporate surface science understanding into their art This workshop aimed to counter at least in some measure these stereotypes Its focus was on generating dialogue on the fundamental structural and kinetic processes that lead to the initial stages of film growth from both the surface science and crystal growth perspectives To achieve this alternate days emphasized the view of surface science and thin film growth with considerable time for discussion a format that appeared to succeed well The success of the workshop is in large measure due to the efforts of the organizing committee L C Feldman P K Larsen J A Venables and J Villain whose advice on the constitution of the program was invaluable

Molecular Beam Epitaxy Robin F.C. Farrow,1995-12-31 In this volume the editor and contributors describe the use of molecular beam epitaxy MBE for a range of key materials systems that are of interest for both technological and fundamental reasons Prior books on MBE have provided an introduction to the basic concepts and techniques of MBE and emphasize growth and characterization of GaAs based structures The aim in this book is somewhat different it is to demonstrate the versatility of the technique by showing how it can be utilized to prepare and explore a range of distinct and diverse materials For each of these materials systems MBE has played a key role both in their development and application to devices

Physics and Applications of Quantum Wells and Superlattices E.E. Mendez, K. von Klitzing, 2012-12-06 This book
contains the lectures delivered at the NATO Advanced Study Institute on Physics and Applications of Quantum Wells and
Superlattices held in Erice Italy on April 21 May 1 1987 This course was the fourth one of the International School of Solid
State Device Research which is under the auspices of the Ettore Majorana Center for Scientific Culture In the last ten years
we have seen an enormous increase in research in the field of Semiconductor Heterostructures as evidenced by the large
percentage of papers presented in recent international conferences on semiconductor physics Undoubtedly this expansion
has been made possible by dramatic advances in materials preparation mostly by molecular beam epitaxy and organometallic
chemical vapor deposition The emphasis on epitaxial growth that was prevalent at the beginning of the decade thus the
second course of the School held in 1983 was devoted to Molecular Beam Epitaxy and Heterostructures has given way to a
strong interest in new physical phenomena and new material structures and to practical applications that are already
emerging from them Growth of Semiconductor Structures and High-Tc Thin Films on Semiconductors A. Madhukar, 1990
