Semiconductors and Semimetals: Device applications Jacques I. Pankove, 1984 Practical Handbook of Photovoltaics T. Markvart, L. Castaner, 2003-10-30 This handbook opens with an overview of solar radiation and how its energy can be tapped using photovoltaic cells Other chapters cover the technology manufacture and application of PV cells in real situations The book ends by exploring the economic and business aspects of photovoltaics Solar Cells Tom Markvart, Luis Castaner, 2004-12-15 The capture and use of solar energy has been growing for many years but only in recent times have advances in design and manufacture allowed us to see the incorporation of solar energy as a significant player in the renewable energy arena Solar cells are at the heart of any photovoltaic system and in this book the various types are described and their characteristics reviewed Going beyond materials design and function Solar Cells also covers their testing monitoring and calibration thus providing a comprehensive account of current activity in this important field of research and industry Solar Cells has been abstracted from the recent Practical Handbook of Photovoltaics by the same editors ISBN 185617 3909 2003 Elsevier Internationally respected contributors from industry and academia Abstracted from The Practical Handbook of Photovoltaics by the same Editors A comprehensive source book on all aspects of solar cells *Mercury Cadmium Telluride* Peter Capper, James Garland, 2011-06-20 Mercury cadmium telluride MCT is the third most well regarded

semiconductor after silicon and gallium arsenide and is the material of choice for use in infrared sensing and imaging The reason for this is that MCT can be tuned to the desired IR wavelength by varying the cadmium concentration Mercury Cadmium Telluride Growth Properties and Applications provides both an introduction for newcomers and a comprehensive review of this fascinating material Part One discusses the history and current status of both bulk and epitaxial growth techniques Part Two is concerned with the wide range of properties of MCT and Part Three covers the various device types that have been developed using MCT Each chapter opens with some historical background and theory before presenting current research Coverage includes Bulk growth and properties of MCT and CdZnTe for MCT epitaxial growth Liquid phase epitaxy LPE growth Metal organic vapour phase epitaxy MOVPE Molecular beam epitaxy MBE Alternative substrates Mechanical thermal and optical properties of MCT Defects diffusion doping and annealing Dry device processing Photoconductive and photovoltaic detectors Avalanche photodiode detectors Room temperature IR detectors

International Research in Engineering Sciences VIII Tayfun Soysal,2024-05-01 Mercury Cadmium Telluride Imagers A.C. Onshage,1997-06-18 In two parts this book describes the evolution of mercury cadmium telluride HgCdTe imager structures based upon published patents and patent applications The first part covers monolithic arrays and the second part describes hybrid arrays Each part has 5 chapters with each document placed in chronological order with the documents with the earliest priority placed first Focus has been directed at the steps of manufacturing and structures of imagers There is an index at the end of the book containing the patent number the name of the applicant and the date of publication of each cited document This monograph will serve as a useful summary of the patents and patent applications in the field of mercury cadmium telluride imagers **Properties of Narrow Gap Cadmium-based Compounds** Peter Capper,1994 This highly structured volume contains sections on growth and device aspects of mercury cadmium telluride MCT **Photovoltaic Materials** Richard H Bube,1998-05-30 Research and development of photovoltaic solar cells is playing an ever larger practical role in energy supply and ecological conservation all over the world Many materials science problems are encountered in understanding existing solar cells and the development of more efficient less costly and more stable cells This important and timely book provides a historical overview but concentrates primarily on exciting developments in the last decade It describes the properties of the materials that play an important role in photovoltaic applications the solar cell structures in which they are used and the experimental and theoretical developments that have led to the most promising contenders a **Compound Semiconductor Bulk Materials and Characterizations** Osamu Oda,2007 This book is concerned with compound semiconductor bulk materials and has been written for students researchers and engineers in material science and device fabrication It offers them the elementary and intermediate knowledge of compound semiconductor bulk materials necessary for entering this field In the first part the book describes the physical properties crystal growth technologies principles of crystal growth various defects in crystals characterization

techniques and applications In the second and the third parts the book reviews various compound semiconductor materials including important industrial materials and the results of recent research **Photon, Beam and Plasma Assisted**

Processing E.F. Krimmel,I.W. Boyd,1989-02-01 This symposium attracted 82 papers which were presented orally or as posters Fourteen invited speakers presented state of the art reviews and aspects of future key topics in this increasingly important area of materials science The high level of scientific presentation during the conference enhanced the aim of the symposium which was to stimulate discussion amongst materials scientists chemists engineers and physicists with a common interest in this field and to disseminate knowledge of progress **Proceedings of the Estonian Academy of Sciences,**

Chemistry ,1999-03 **Advances in Thin-Film Solar Cells** I M Dharmadasa,2012-09-17 This book concentrates on the latest developments in our understanding of solid state device physics The material presented is mainly experimental and based on CdTe thin film solar cells It extends these new findings to CIGS thin film solar cells and presents a new device design based on graded bandgap multilayer solar cells This design has been experimentally tested using the well researched GaAs AlGaAs system and initial devices have shown impressive device parameters These devices are capable of absorbing all radiation UV visible and infra red within the solar spectrum and combines impact ionization and impurity photovoltaic effects The improved device understanding presented in this book should impact and guide future device design and low cost thin film solar panel manufacture *Computational Fluid Dynamics with Moving Boundaries* Wei Shyy,H. S.
