Switzerland India Austria **Schrödinger Diffusion Processes** Robert Aebi, 2012-12-06 In 1931 Erwin Schrödinger considered the following problem: A huge cloud of independent and identical particles with known dynamics is supposed to be observed at finite initial and final times. What is the most probable state of the cloud at intermediate times? The present book provides a general yet comprehensive discourse on Schrödinger's question. Key roles in this investigation are played by conditional diffusion processes, pairs of non linear integral equations and interacting particles systems. The introductory first chapter gives some historical background, presents the main ideas in a rather simple discrete setting and reveals the meaning of intermediate prediction to quantum mechanics. In order to answer Schrödinger's question, the book takes three distinct approaches dealt with in separate chapters: transformation by means of a multiplicative functional projection, by means of relative entropy and variation of a functional associated to pairs of non linear integral equations. The book presumes a graduate level of knowledge in mathematics or physics and represents a relevant and demanding application of today's advanced probability theory *Stochastic Analysis and Related Topics* V.H. Körzlioglu, B. Oksendal, A.S.

Üstünel, 2012-12-06 This volume contains the contributions of the participants to the Oslo Silivri Workshop on Stochastic Analysis held in Silivri from July 18 to July 29 at the Nazım Terzioglu Graduate Research Center of Istanbul University 1994. There were three lectures: Mathematical Theory of Communication Networks by V. Anantharam; State Space Models of the Term Structure of Interest Rates by D. Duffie; Theory of Capacity on the Wiener Space by F. Hirsch. The main lectures are presented at the beginning of the volume. The contributing papers cover different domains varying from random fields to distributions on infinite dimensional spaces. We would like to thank the following organizations for their financial support: VISTA (a research cooperation between the Norwegian Academy of Sciences and Letters and Den Norske Stats Oljeselskap); A.S. Statsoil; Ecole Nationale Supérieure des Télécommunications de Paris. In the summer of 1994 we lost our dear friend and colleague ALBERT BADRIKIAN. We are dedicating this volume to his memory. H. Oceanography Robert Adler,Peter Mu ller,B.L. Rozovskii,1996-03-28 The study of the ocean is almost as old as the history of mankind itself When the first seafarers set out in their primitive ships they had to understand as best they could tides and currents eddies and vortices for lack of understanding often led to loss of life These primitive oceanographers were of course primarily statisticians They collected what empirical data they could and passed it down initially by word of mouth to their descendants Data collection continued throughout the millenia and although data bases became larger more reliable and better codified it was not really until surprisingly recently that mankind began to try to understand the physics behind these data and shortly afterwards to attempt to model it The basic modelling tool of physical oceanography is today the partial differential equation Somehow we all know that if only we could find the right set of equations with the right initial and boundary conditions then we could solve the mysteries of ocean dynamics once and for all

Asymptotic Methods in Stochastics Lajos Horvath and Barbara Szyszkowicz, Honoring over forty years of Miklos Csorgo's work in probability and statistics this title shows the state of the research This book covers such topics as path properties of stochastic processes weak convergence of random size sums almost sure stability of weighted maxima and procedures for detecting changes in statistical models

Diffusions and Elliptic Operators Richard F. Bass,2006-05-11 A discussion of the interplay of diffusion processes and partial differential equations with an emphasis on probabilistic methods It begins with stochastic

differential equations the probabilistic machinery needed to study PDE and moves on to probabilistic representations of solutions for PDE regularity of solutions and one dimensional diffusions The author discusses in depth two main types of second order linear differential operators non divergence operators and divergence operators including topics such as the Harnack inequality of Krylov Safonov for non divergence operators and heat kernel estimates for divergence form operators as well as Martingale problems and the Malliavin calculus While serving as a textbook for a graduate course on diffusion theory with applications to PDE this will also be a valuable reference to researchers in probability who are interested in PDE as well as for analysts interested in probabilistic methods

Local Times and Excursion Theory for Brownian Motion

Ju-Yi Yen,Marc Yor,2013-10-01 This monograph discusses the existence and regularity properties of local times associated to a continuous semimartingale as well as excursion theory for Brownian paths Realizations of Brownian excursion processes may be translated in terms of the realizations of a Wiener process under certain conditions With this aim in mind the monograph presents applications to topics which are not usually treated with the same tools e g arc sine law laws of functionals of Brownian motion and the Feynman Kac formula
