

SENSATION (PSYCHOLOGY)

In psychology, sensation refers to the unique process of how people receive information through their senses, which include touch, taste, smell, sight, and hearing.

DEFINITION

According to Sanderson and Huffman:

"Sensation is the process by which we detect and convert (transduce) raw sensory data from our body and the environment, and then transmit it to our brain" (2023, p. 174).

The process of sensation in psychology includes identifying, communicating, and interpreting stimuli from our surroundings.

EXAMPLES

- **Feeling the sun on our skin:** Our skin receptors can detect heat from the sun and send a signal to the brain, which helps us feel the sensation of warmth on our skin.
- **Tasting our favorite food:** Our tongue's taste buds can detect different flavors - sweet, sour, salty, or bitter - and send this information to the brain for us to experience the taste.

Sensation The:

Sensation, the Intuitive System, and Designed Experience Qing Archer Zhang, James Paul Gee, 2023-10-08 This groundbreaking book redefines human learning by placing sensation and experience at its core. The book delves into the essence of what it means to be human and how humans best learn and flourish. Drawing on insights from evolutionary biology, neuroscience, learning science, and the arts, the authors weave together a rich tapestry of ideas that challenge traditional approaches to education. The authors argue that school and educational research often ignore fundamental aspects of human learning such as empathy, intuition, and balance. By examining what experience really means when we say humans learn from experience, the authors propose a more holistic approach to education, much of which goes on outside school that goes beyond talk, texts, and analytical reasoning. With examples from various media, particularly the wildly popular Japanese anime series *Attack on Titan*, the authors treat good teaching as experience design and show how experience can be a powerful force for learning and human flourishing. As our world faces unprecedented challenges and crises, this timely book serves as a clarion call for a transformative approach to teaching and learning that respects the nature of humans as distinctive sorts of creatures, urging us to create environments that nurture the full spectrum of human capacities. **Sensation in the Pelvic**

Region Jean Jacques Wyndaele, 2022-11-18 This book covers sensation in all major components of the pelvic region. The small pelvis is containing many different structures and viscera, and sensations elicited there are important for regulating a normal daily life and for warning that something is going wrong. The sensory system is driving in many aspects the motor activity and precedes and guides the efferent functions. It is surprising that in the last 60 years the ratio between research and publications about sensory versus motor has gradually become less. There has been undoubtedly a rise in the number of publications written on pelvic sensation, but in the same time the number of manuscripts on motor function have increased more. It is the hope that this compilation of most data available on sensation will be of interest for the reader, will incite to perform more research, so that an important part of pelvic functional diagnosis and treatment modalities will use the whole of the mechanisms available. The book is intended for all interested in pelvic functions and the interactions between the different structures: specialists in urology, gastroenterology, sexuality, pain, pelvic floor function, and dysfunction, paediatricians, and geriatricians, neurologists, students, and those in training. The reader will find interesting and challenging information and suggestions for further research. *On the Evolution of Conscious Sensation, Conscious Imagination, and Consciousness of Self*

Robert G. Kunzendorf, 2016-12-05 Philosophical thought experiments invoking inverted spectra, zombies, et cetera suggest that conscious sensations have no function, and psychological studies finding no correlation between vivid visual imaging and visual problem solving suggest that conscious images have no function. Furthermore, both philosophical and psychological theories suggest that self-consciousness has no function. Countering such suggestions, the post-Darwinian double aspect theory which Professor Robert Kunzendorf introduces in the first chapter of his monograph *On the Evolution of Conscious*

Sensation Conscious Imagination and Consciousness of Self points to evolutionary functions of certain sensations youngling vivid images and self consciousness Kunzendorf s second chapter presents evidence that the most primitive sensation pain the subjective aspect of free nerve endings or nociceptors has a survival promoting function But as the pressure nociceptor mutates into a touch receptor the heat nociceptor into temperature receptor and the chemical nociceptor into a taste receptor the painful qualia of these nociceptors evolve respectively into touch sensation temperature sensation or taste sensation painless sensations that add no survival benefit to their receptor s physical aspect Building on evidence that retinal receptors embodying visual qualia evolved from primitive eyespots responsive to injurious heat at a distance or painful light the third chapter presents evidence that visually imagined sensations are the subjective qualities of retinal receptors that are corticofugally innervated in warm blooded animals for the developmental purpose of testing cortically hypothesized sensory motor rules that have greater survival value than cold blooded stimulus response associations The fourth and final chapter focuses on self conscious reality testing and on visuo spatial self conceptualization and presents evidence that such manifestations of self awareness evolve only in those warm blooded animals whose rule developing youth lasts two years or longer that is those mammals and birds whose survival during the imaginal testing of rules is subjected to prolonged risk if self consciousness that one is imaging sensations rather than perceiving sensations is absent

The Creation of Sensation and the Evolution of Consciousness E T Mullin,2007-11 Too many people have little regard for their lives as though they consider it out of their hands and beyond control Should we just absorb the slings and arrows or should we look for truth and how to cope with it There is nothing more crucial to the life of an organism than its nervous system It is the source of all sensation action and motivation In short it is the mechanism that sustains life Sensation is the nervous system s communications facility it monitors all incoming events that impact the body and directs them to the brain where they can be analyzed and acted upon To be precisely understood the brain communicates in just one language the language of sensation Universally used throughout the human

nervous system we see examples of sensation language in its messages to us such as touch taste smell sound and sight our five senses But these are only examples of its extensive use Sensation began with life itself and evolved from meager beginnings into its enormous variations in modern humans Within all organisms the occurrence of each sensation corresponds to a unit of consciousness

Victorian Sensation, Or, The Spectacular, the Shocking, and the Scandalous in Nineteenth-century Britain Michael Diamond,2003 Victorian Sensation sheds light on the Victorians fascination with celebrity culture and their obsession with gruesome and explicit reportage of murders and sex scandals With a vivid cast of characters ranging from the serial poisoner William Palmer to Charles Dickens Jumbo the Elephant distinguished politicians and even the Queen herself this passionate analysis of the period reveals how the reporting methods of our own popular media have their origins in the Victorian press and shows that sensation was as integral a part of society in the nineteenth century as it is today
