Sensations Christopher S. Hill, 1991-01-25 This is a book about sensory states and their apparent characteristics It confronts a whole series of metaphysical and epistemological questions and presents an argument for type materialism the view that sensory states are identical with the neural states with which they are correlated According to type materialism sensations are only possessed by human beings and members of related biological species silicon based androids cannot have sensations The author rebuts several other rival theories dualism double aspect theory eliminative materialism functionalism and explores a number of important issues the forms and limits of introspective awareness of sensations the semantic properties of sensory concepts knowledge of other minds and unity of consciousness The book is a significant contribution to the philosophy of mind and has much to say to psychologists and cognitive scientists **The Oxford Companion to**

Consciousness Tim Bayne, Axel Cleeremans, Patrick Wilken, 2014-02-27 Consciousness is undoubtedly one of the last remaining scientific mysteries and hence one of the greatest contemporary scientific challenges How does the brain's activity result in the rich phenomenology that characterizes our waking life Are animals conscious Why did consciousness evolve How does science proceed to answer such questions Can we define what consciousness is Can we measure it Can we use experimental results to further our understanding of disorders of consciousness such as those seen in schizophrenia delirium or altered states of consciousness These questions are at the heart of contemporary research in the domain Answering them requires a fundamentally interdisciplinary approach that engages not only philosophers but also neuroscientists and psychologists in a joint effort to develop novel approaches that reflect both the stunning recent advances in imaging methods as well as the continuing refinement of our concepts of consciousness In this light the Oxford Companion to Consciousness is the most complete authoritative survey of contemporary research on consciousness Five years in the making and including over 250 concise entries written by leaders in the field the volume covers both fundamental knowledge as well as more recent advances in this rapidly changing domain Structured as an easy to use dictionary and extensively cross referenced the Companion offers contributions from philosophy of mind to neuroscience from experimental psychology to clinical findings so reflecting the profoundly interdisciplinary nature of the domain Particular care has been taken to ensure that each of the entries is accessible to the general reader and that the overall volume represents a comprehensive snapshot of the contemporary study of consciousness The result is a unique compendium that will prove indispensable to anyone interested in consciousness from beginning students wishing to clarify a concept to professional consciousness researchers looking for the best characterization of a particular phenomenon [The Blackwell Companion to Consciousness](#) Susan Schneider, Max Velmans, 2017-03-16 Updated and revised the highly anticipated second edition of The Blackwell Companion to Consciousness offers a collection of readings that together represent the most thorough and comprehensive survey of the nature of consciousness available today Features updates to scientific chapters reflecting the latest research in the field

Non-physicalist Theories of Consciousness

Hedda Hassel Mørch,2024-02-01 Is consciousness a purely physical phenomenon Most contemporary philosophers and theorists hold that it is and take this to be supported by modern science But a significant minority endorse non-physicalist theories such as dualism idealism and panpsychism among other reasons because it may seem impossible to fully explain consciousness or capture what it's like to be in conscious states such as seeing red or being in pain in physical terms This Element will introduce the main non-physicalist theories of consciousness and explain the most important arguments for them and

consider how they each respond to the scientific and other arguments in support of physicalism This title is also available as Open Access on Cambridge Core **Physicalism and Mental Causation** Sven Walter, Heinz-Dieter Heckmann, 2015-11-04 Physicalism the thesis that everything there is in the world including our minds is constituted by basic physical entities has dominated the philosophy of mind during the last few decades But although the conceptual foundations of the physicalist agenda including a proper explication of notions such as causation determination realization or even physicalism itself must be settled before more specific problems e g the problems of mental causation and human agency can be satisfactorily addressed a comprehensive philosophical reflection on the relationships between the various key concepts of the debate on physicalism is yet missing This book presents a range of essays on the conceptual foundations of physicalism mental causation and human agency written by established and leading authors in the field The Conscious Mind David J. Chalmers, 1997 Writing in a rigorous thought provoking style the author takes us on a far reaching tour through the philosophical ramifications of consciousness offering provocative insights into the relationship between mind and brain

World Without Design Michael C. Rea, 2002-08-01 Philosophical naturalism according to which philosophy is continuous with the natural sciences has dominated the Western academy for well over a century but Michael Rea claims that it is without rational foundation and that the costs of embracing it are surprisingly high The first part of World Without Design aims to provide a fair and historically informed characterization of naturalism Rea then argues compellingly to the surprising conclusion that naturalists are committed to rejecting realism about material objects materialism and perhaps realism about other minds This conclusion is striking largely because naturalism is often simply identified with materialism and the remaining two theses are ones that naturalists very typically want to endorse Rea goes on to examine two alternative research programs intuitionism and supernaturalism and argues for the conclusion that intuitionism under certain circumstances is self defeating World Without Design offers a provocative challenge to philosophical orthodoxy It will make uncomfortable reading for many philosophers **Oxford Studies in Philosophy of Mind** Uriah Kriegel, 2024-09-21 Oxford Studies in Philosophy of Mind presents cutting edge work in the philosophy of mind combining invited articles and articles selected from submissions Each volume will highlight two themes to bring focus to debates The series will reflect the diversity of methods adopted in contemporary philosophy of mind and provide a venue for rigorous and innovative work by both established and up and coming voices in the field The themes covered in the fourth volume are twenty first century idealism acquaintance and perception and acquaintance and consciousness It also contains a book symposium on David Chalmers Reality and an article on Aristotle s philosophy of mind **Dictionary of Philosophy** Alan Lacey, 2002-09-11 Providing an illuminating and informed introduction to central philosophical issues concepts and perspectives in the core fields of metaphysics epistemology and philosophical logic the Dictionary takes the most common terms and notions and clarifies what they mean to the philosopher and what sort of problems the philosopher finds associated with them Thoroughly

revised and updated the bibliographies supply core reading lists and each entry uses extensive cross referencing to related themes and concepts to provide a greater sense of access control and comprehension The Dictionary will also provide those working in proximate fields with an understanding of areas of overlapping interest concepts of common applicability and the full range and diversity of philosophical analysis and insight

Measuring the Immeasurable Mind Matthew Owen, 2021-05-11 In Measuring the Immeasurable Mind Where Contemporary Neuroscience Meets the Aristotelian Tradition Matthew Owen argues that despite its nonphysical character it is possible to empirically detect and measure consciousness Toward the end of the previous century the neuroscience of consciousness set its roots and sprouted within a materialist milieu that reduced the mind to matter Several decades later dualism is being dusted off and reconsidered Although some may see this revival as a threat to consciousness science aimed at measuring the conscious mind Owen argues that measuring consciousness along with the medical benefits of such measurements is not ruled out by consciousness being nonphysical Owen proposes the Mind Body Powers model of neural correlates of consciousness which is informed by Aristotelian causation and a substance dualist view of human nature inspired by Thomas Aquinas who often followed Aristotle In addition to explaining why there are neural correlates of consciousness the model provides a philosophical foundation for empirically discerning and quantifying consciousness En route to presenting and applying the Mind Body Powers model to neurobiology Owen rebuts longstanding objections to dualism related to the mind body problem With scholarly precision and readable clarity Owen applies an oft forgotten yet richly developed historical vantage point to contemporary cognitive neuroscience

Natural Minds Thomas W. Polger, 2006-01-20 In Natural Minds Thomas Polger advocates and defends the philosophical theory that mind equals brain that sensations are brain processes and in doing so brings the mind brain identity theory back into the philosophical debate about consciousness The version of identity theory that Polger advocates holds that conscious processes events states or properties are type identical to biological processes events states or properties a tough

minded account that maintains that minds are necessarily identical to brains a position held by few current identity theorists Polger's approach to what William James called the great blooming buzzing confusion of consciousness begins with the idea that we need to know more about brains in order to understand consciousness fully but recognizes that biology alone cannot provide the entire explanation Natural Minds takes on issues from philosophy of mind philosophy of science and metaphysics moving freely among them in its discussion Polger begins by answering two major objections to identity theory Hilary Putnam's argument from multiple realizability which discounts identity theory because creatures with brains unlike ours could also have mental states and Saul Kripke's modal argument against mind brain identity based on the apparent contingency of the identity statement He then offers a detailed account of functionalism and functional realization which offer the most serious obstacle to consideration of identity theory Polger argues that identity theory can itself satisfy the kind of explanatory demands that are often believed to favor functionalism The Multiple Realization Book Thomas W. Polger, Lawrence A. Shapiro, 2016-09-02 Since Hilary Putnam offered multiple realization as an empirical hypothesis in the 1960s philosophical consensus has turned against the idea that mental processes could be identified with brain processes and multiple realization has become the keystone of the antireductive consensus across philosophy of science broadly Thomas W. Polger and Lawrence A. Shapiro offer the first book length investigation of multiple realization Their analysis of multiple realization serves as a starting point to a series of philosophically sophisticated and empirically informed arguments that cast doubt on the generality of multiple realization in the cognitive sciences In the course of making their case they respond to classic defenses of multiple realization that Jerry Fodor Ned Block and other prominent philosophers of psychology have offered Polger and Shapiro conclude that the identity theory once left for dead remains a viable theory of mind one that when suitably framed enjoys the benefits typically thought to accrue only to theories of mind that presuppose the truth of multiple realization As Polger and Shapiro see matters mind brain identities have played an important role in the growth and achievements of the cognitive sciences and they see little prospect or need for multiple realization in an empirically based theory of mind This leads Polger and Shapiro to offer an alternative framework for understanding explanations in the cognitive sciences as well as in chemistry biology and other non basic sciences Philosophical Letters of David K. Lewis David Kellogg Lewis, 2020 The life long correspondence of David K. Lewis one of the most influential philosophers of the twentieth century reveals the development breadth and depth of his philosophy in its historical context The second of this two volume collection focuses on his contributions to philosophical questions of language mind and epistemology
