Daniel Wang, 2021-12-30 Both developing and developed countries face an increasing mismatch between what patients expect to receive from healthcare and what the public healthcare systems can afford to provide Where there has been a growing recognition of the entitlement to receive healthcare the frustrated expectations with regards to the level of provision has led to lawsuits challenging the denial of funding for health treatments by public health systems This book analyses the impact of courts and litigation on the way health systems set priorities and make rationing decisions In particular it focuses on how the judicial protection of the right to healthcare can impact the institutionalization functioning and centrality of Health Technology Assessment HTA for decisions about the funding of treatment Based on the case study of three jurisdictions Brazil Colombia and England it shows that courts can be a key driver for the institutionalization of HTA These case studies show the paradoxes of judicial control which can promote accountability and impair it demand administrative competence and undermine bureaucratic capacities The case studies offer a nuanced and evidence informed understanding of these paradoxes in the context of health care by showing how the judicial control of priority setting decisions in health care can be used to require and control an explicit scheme for health technology assessment but can also limit and circumvent it It will be essential for those researching Medical Law and Healthcare Policy Human Rights Law and Social Rights **Patients, Power and Responsibility** John Spiers, 2018-12-14 Care pathways are being developed throughout the health service to improve the quality and effectiveness of care Are they being developed efficiently and making the most of the latest clinical computing systems This is the first practical guide on how Information Technology and systems methods can support the development implementation and maintenance of e Pathways Case studies throughout highlight team approaches to facilitation clinical knowledge management process analysis and redesign and computerisation providing insights into how e Pathways can be used to support high quality patient care The information is presented in an easy to read style and requires no prior knowledge of IT systems Doctors nurses and managers throughout primary and secondary care as well as healthcare information technology specialists and suppliers will find this to be essential reading An accompanying CD ROM includes supplementary information providing useful website links and additional material on specific topic areas
