Sensitive Souls Senses And Communication In Plants Animals And Microbes

Sensitive Souls Senses And Communication In Plants Animals And Microbes:

Sensitive Souls Brian J. Ford, 2002-03-01 Ford's new thesis rejects the scientific orthodoxy that animals cannot feel pain or experience emotion as a symptom of the selfishness of our technological era. He reveals life in the plant and animal kingdoms to exist in glorious variety rich with sensation and creating a marvelously complex web of interaction with its surroundings. Mammals, birds, even fish can mourn for a lost love. Pain is felt at all levels of organization even in microscopic organisms. Plants are presented as intricate and complex as they respond to their surroundings and modify their behavior in the light of what they sense. Plants, animals, and humans are united in a tapestry of communion with nature and with each other. Illustrated.

Sensitive Souls Brian J. Ford, 1999 Starting from the assumption that humans have always believed themselves innately superior to other species, this work sets about demolishing such views. Can animals feel love? Might they be sensitive and sentient rather than passive and reactive?

Leonardo's Choice Carol Gigliotti, 2009-09-18 Leonardo's Choice Genetic Technologies and Animals is an edited collection of twelve essays and one dialogue focusing on the profound affect the use of animals in biotechnology is having on both humans and other species. Communicating crucial understandings of the integrated nature of the human and non-human world, these essays, unlike the majority of discussions of biotechnology, take seriously the impact of these technologies on animals themselves. This collection's central questions revolve around the disassociation Western ideas of creative freedom have from the impacts those ideas and practices have on the non-human world. This transdisciplinary collection includes perspectives from the disciplines of philosophy, cultural theory, art, and literary theory, history, and theory of science, environmental studies, law, landscape architecture, history, and geography. Included authors span three continents and four countries. Included essays contribute significantly to a growing scholarship surrounding the question of the animal emanating from philosophical, cultural, and activist discourses. Its authors are at the forefront of the growing number of theorists and practitioners across the disciplines concerned with the impact of new technologies on the more-than-human world.

Nature Across Cultures Helaine Selin, 2003-09-30 Nature Across Cultures: Views of Nature and the Environment in Non-Western Cultures consists of about 25 essays dealing with the environmental knowledge and beliefs of cultures outside of the United States and Europe. In addition to articles surveying Islamic, Chinese, Native American, Aboriginal, Australian, Indian, Thai, and Andean views of nature and the environment, among others, the book includes essays on Environmentalism and Images of the Other, Traditional Ecological Knowledge, Worldviews and Ecology, Rethinking the Western/non-Western Divide, and Landscape, Nature, and Culture. The essays address the connections between nature and culture and relate the environmental practices to the cultures which produced them. Each essay contains an extensive bibliography. Because the geographic range is global, the book fills a gap in both environmental history and in cultural studies. It should find a place on the bookshelves of advanced undergraduate students, graduate students, and scholars, as well as in libraries serving those groups.

Straw Dogs John Gray, 2016-03-29 The British bestseller *Straw Dogs* is an exciting radical work of philosophy which sets out to challenge our most cherished assumptions about what it means to be human From Plato to Christianity from the Enlightenment to Nietzsche and Marx the Western tradition has been based on arrogant and erroneous beliefs about human beings and their place in the world Philosophies such as liberalism and Marxism think of humankind as a species whose destiny is to transcend natural limits and conquer the Earth John Gray argues that this belief in human difference is a dangerous illusion and explores how the world and human life look once humanism has been finally abandoned The result is an exhilarating sometimes disturbing book that leads the reader to question our deepest held beliefs Will Self in the New Statesman called *Straw Dogs* his book of the year I read it once I read it twice and took notes I thought it that good Nothing will get you thinking as much as this brilliant book Sunday Telegraph

Fencing Paradise Richard Mabey, 2011-12-31 In this remarkable journal of visits to Eden Mabey transports his reader from Cornwall to the Mediterranean to the Tropics from Old World to New from present to personal memory to new perspectives on our collective artistic and emotional past Sensuous and evocative exquisitely written his new book challenges the reader to look differently at the world and our place in the landscape At the same time Mabey is controversial in his views about what we mean by buzz words like renewable or sustainable and he is highly provocative in his final response to the Eden Project itself

No entanto como a ciência tem hoje uma autoridade com a qual a experiência comum não pode rivalizar observemos o ensinamento de Darwin de que as espécies são apenas aglomerados de genes interagindo aleatoriamente uns com os outros e com seus ambientes em permanente mudança. Espécies não podem controlar seus destinos. Espécies não existem. Isso se aplica igualmente aos humanos.

El caracol y la flecha Susana Eugenia Matallana Peláez, 2024-03-04. Partiendo de dos textos escritos por pensadores indígenas colombianos El caracol y la flecha reconstruye en un primer momento lo que significó para Abya Yala a partir de la Conquista la imposición de una temporalidad lineal y de una ontología no relacional totalmente ajenas a la arquitectura conceptual del continente hasta la llegada de los europeos. Posteriormente en un segundo momento el texto pasa a examinar en qué consisten exactamente la temporalidad espiralada y la ontología relacional que predominaban en la Abya Yala prehispánica para luego pasar a considerar las posibilidades conceptuales y de liberación y emancipación que dicha temporalidad y ontología albergan para nuestro continente. *The Writers Directory*, 2013 **Forthcoming Books** Rose Arny, 2002 *Arts & Humanities Citation Index*, 2000 **Bulletin of the Atomic Scientists**, 1973-10 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security. Focusing on the postmodernist braiding of various indigenous and ecofeminist ontologies close readings of the animistic and totemic dimensions of the stories at hand lead to the theorizing of liminal realism a mode that shares much with magical realism but that is approached through an ecopoetic lens specifically working an interspecies kind of magic situating readers in between human and other than human worlds. This book promotes a worldview based on relationships of reciprocity and symbiosis. It restores our capacity for wonder together with our sensitive intelligence. Liminal realism adopts a stance in between scientific mythical and poetic worldviews as it calls attention to the

The Role of Theory in Advancing 21st-Century Biology National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Committee on Defining and Advancing the Conceptual Basis of Biological Sciences in the 21st Century, 2008-01-22 Although its importance is not always recognized theory is an integral part of all biological research Biologists theoretical and conceptual frameworks inform every step of their research affecting what experiments they do what techniques and technologies they develop and use and how they interpret their data By examining how theory can help biologists answer questions like What are the engineering principles of life or How do cells really work the report shows how theory synthesizes biological knowledge from the molecular level to the level of whole ecosystems The book concludes that theory is already an inextricable thread running throughout the practice of biology but that explicitly giving theory equal status with other components of biological research could help catalyze transformative research that will lead to creative dynamic and innovative advances in our understanding of life
