Separation Technology:

Separation Technology John Garside, Institution of Chemical Engineers (Great Britain), 1994 Separation technology is at the heart of engineering in the chemical and process industries This book takes the pulse of the technology and assesses its health for future use Recently separation technology has been under pressure to improve both the quality and diversity of products In response the condition of older technologies drying crystallization and distillation has been improved while newer ideas like adsorption and bioseparations have been brought rapidly into training Understanding of the underlying phenomena of separations argue the authors leads to better equipment design and more applications Newer processes depend on subtle differences in the molecular architecture of the components to be separated chiral molecules for example The way in which this is reflected at a larger scale is one of the themes of the book *Separation Technologies for the Industries of the Future* Panel on Separation Technology for Industrial Reuse and Recycling, Committee on Industrial Technology Assessments, Commission on Engineering and Technical Systems, National Materials Advisory Board, Division on Engineering and Physical Sciences, National Research Council, 1999-01-22 Separation processes or processes that use physical chemical or electrical forces to isolate or concentrate selected constituents of a mixture are essential to the chemical petroleum refining and materials processing industries In this volume an expert panel reviews the separation process needs of seven industries and identifies technologies that hold promise for meeting these needs as well as key technologies that could enable separations In addition the book recommends criteria for the selection of separations research projects for the Department of Energy's Office of Industrial Technology *Gas Separation Technology* E. F. Vansant, R. Dewolfs, 1990 The important role of separation in various branches of science and technology demands a comprehensive and integrated treatment of the subject Hence a science of separation is now emerging that deals with the fundamental physical and chemical phenomena involved in the attainment of separations as well as with the development and application of various processes This book aims to present a comprehensive treatment of both fundamental aspects and practical applications of gas separations purification and related techniques Gas separations are usually achieved by physical or physicochemical phenomena divided into equilibrium and rate processes although chemical reactions may also be involved in this process The fundamentals of thermodynamics and modelling both important for better design and process operations are therefore discussed in this book Latest developments in gas separations using sorbents such as zeolites activated carbon impregnated materials etc are also handled as are gas separations using membranes cryogenic techniques and chemical processes including catalytic purification Various gas separation methods are evaluated and compared together with mixed technologies in terms of practical objectives such as performance limitations and cost A special section is devoted to the promising new developments in accurate gas measurements **Separation Technologies for Minerals, Coal, and Earth Resources** Courtney Young, Gerald H. Luttrell, 2012 This book is an authoritative digest of the latest developments in the

mineral processing industry Dozens of authors share their insights on how practitioners can develop earth resources more economically while simultaneously addressing vital factors ranging from sustainability to environmental stewardship The book examines coal processing surface forces and hydrophobicity process improvements and environmental controls dewatering and drying gravity separations industrial minerals flotation base metal flotation flotation equipment and practice process reagents magnetic and electrostatic separations modeling and process control and resource engineering Important current issues such as gas hydrates oil sands secondary materials metals and waste and process waters are also discussed
