Environmental Data Service, 1960 **Spatial and Temporal Variations of the Turbulent Fluxes of Heat, Momentum, and Water Vapor Over Lake Ontario During IFYGL** Bradford R. Bean, 1975 During the 1972 IFYGL alert periods the highly instrumented NOAA RFF DC 6 aircraft was used to record the time series of wind temperature and water vapor at heights ranging from 18 to 300 m above the surface of Lake Ontario The aircraft was equipped with a gust probe system a fast response thermistor a microwave refractometer for water vapor measurements and a downward pointing IR system as well as the normal in flight measurement of standard meteorological parameters The time series records have been found to display a highly intermittent nature This is especially the case for evaporation when in the fall Polar Continental outbreaks move across the lake In particular such an outbreak of cold dry air moved across the lake at 12 15 m s 1 on 9 October 1972 This resulted in the air temperature at 30 m above the lake to drop from 12 to 6 C while the evaporation rate increased to more than 1 cm day 1 This may be compared with the 0 5 cm day 1 normal evaporation observed in the tropics during BOMEX Furthermore IR lake surface temperatures show cold regions 5 C along the north shore presumably due to strong upwelling while the center and south shore regions of the lake were of the order of 12 to 15C The turbulent flux quantities of momentum heat and water vapor were obtained by the eddy correlation technique and their spectra were determined at several locations over the lake surface for 3 minute sampling lengths At the aircraft speed of 92 m s 1 this represents a flight path of 17 km for both along wind and constant fetch patterns The spectra demonstrate the tendency for the peak value to march to higher wavelengths with increasing height **Encyclopedia of Hurricanes, Typhoons, and Cyclones, Third Edition** David Longshore, 2020-06-01 Praise for the previous edition a strong pick for any collection strong in weather science at the high school or college levels Midwest Book Review The entries in the encyclopedia make great reading has considerable merit and most libraries will want to purchase the volume for their reference collections American Reference Books Annual comprehensive highly readable Recommended Choice a fact filled work with articles that are informative and accessible to both student and lay reader a reasonable and worthwhile investment for both academic and public libraries larger libraries may want this title for their circulating collections as well Against the Grain Now in its third edition this comprehensive encyclopedia covers all major aspects of tropical cyclone activity Hundreds of extensively cross referenced A to Z entries detail cyclonic storms in meteorology history and culture along with accessible definitions of technical terms and engaging narratives that capture the dramatic intensity of tropical storms hurricanes typhoons and cyclones and the devastation and loss that often resulted Hurricanes Andrew Dean Felix Gilbert Wilma Sandy and Maria are covered in detail in this comprehensive reference as well as the most destructive and deadly tropical cyclone witnessed in the United States in the last 50 years Hurricane Katrina
