book tells the story of the discrepancy method in a few short independent vignettes It is a varied tale which includes such topics as communication complexity pseudo randomness rapidly mixing Markov chains points on the sphere and modular forms derandomization convex hulls Voronoi diagrams linear programming and extensions geometric sampling VC dimension theory minimum spanning trees linear circuit complexity and multidimensional searching The mathematical treatment is thorough and self contained In particular background material in discrepancy theory is supplied as needed Thus the book should appeal to students and researchers in computer science operations research pure and applied mathematics and engineering

Moduli of Supersingular Abelian Varieties Ke-Zheng Li, Frans Oort, 1998-01-19 Abelian varieties can be classified via their moduli In positive characteristic the structure of the p torsion structure is an additional useful tool For that structure supersingular abelian varieties can be considered the most special ones They provide a starting point for the fine description of various structures For low dimensions the moduli of supersingular abelian varieties is by now well understood In this book we provide a description of the supersingular locus in all dimensions in particular we compute the dimension of it it turns out to be equal to $g(g-1)/2$ and we express the number of components as a class number thus completing a long historical line where special cases were studied and general results were conjectured Deuring Hasse Igusa Oda Oort Katsura Oort

Applied Algebra and Number Theory Gerhard Larcher, Friedrich Pillichshammer, Arne Winterhof, Chaoping Xing, 2014-12-11 Harald Niederreiter's pioneering research in the field of applied algebra and number theory has led to important and substantial breakthroughs in many areas This collection of survey articles has been authored by close colleagues and leading experts to mark the occasion of his 70th birthday The book provides a modern overview of different research areas covering uniform distribution and quasi Monte Carlo methods as well as finite fields and their applications in particular cryptography and pseudorandom number generation Many results are published here for the first time The book serves as a useful starting point for graduate students new to these areas or as a refresher for researchers wanting to follow recent trends

Cooperative Decision Making in Common Pool Situations Holger I. Meinhardt, 2012-12-06 The monograph gives a theoretical explanation of observed cooperative behavior in common pool situations The incentives

for cooperative decision making are investigated by means of a cooperative game theoretical framework In a first step core existence results are worked out Whereas general core existence results provide us with an answer for mutual cooperation nothing can be said how strong these incentives and how stable these cooperative agreements are To clarify these questions the convexity property for common pool TU games is scrutinized in a second step It is proved that the convexity property holds for a large subclass of symmetrical as well as asymmetrical cooperative common pool games Core existence and the convexity results provide us with a theoretical explanation to bridge the gap between the observation in field studies for cooperation and the noncooperative prediction that the common pool resource will be overused and perhaps endangered

Quilts: Central Extensions, Braid Actions, and Finite Groups Timothy M. Hsu, 2000-05-06 Quilts are 2 complexes used to analyze actions and subgroups of the 3 string braid group and similar groups This monograph establishes the fundamentals of quilts and discusses connections with central extensions braid actions and finite groups Most results have not previously appeared in a widely available form and many results appear in print for the first time This monograph is accessible to graduate students as a substantial amount of background material is included The methods and results may be relevant to researchers interested in infinite groups moonshine central extensions triangle groups dessins d'enfants and monodromy actions of braid groups

Seminaire de Probabilites XXXIV J. Azema, M. Emery, M. Ledoux, M. Yor, 2007-05-06 This volume contains 19 contributions to various subjects in the theory of commutative and non commutative stochastic processes It also provides a 145 page graduate course on branching and interacting particle systems with applications to non linear filtering by P del Moral and L Miclo

Power Sums, Gorenstein Algebras, and Determinantal Loci Anthony Iarrobino, Vassil Kanev, 1999-12-15 This book treats the theory of representations of homogeneous polynomials as sums of powers of linear forms The first two chapters are introductory and focus on binary forms and Waring's problem Then the author's recent work is presented mainly on the representation of forms in three or more variables as sums of powers of relatively few linear forms The methods used are drawn from seemingly unrelated areas of commutative algebra and algebraic geometry including the theories of determinantal varieties of classifying spaces of Gorenstein Artin algebras and of Hilbert schemes of zero dimensional subschemes Of the many concrete examples given some are calculated with the aid of the computer algebra program Macaulay illustrating the

abstract material The final chapter considers open problems This book will be of interest to graduate students beginning researchers and seasoned specialists Prerequisite is a basic knowledge of commutative algebra and algebraic geometry

Lattice-Gas Cellular Automata and Lattice Boltzmann Models Dieter A. Wolf-Gladrow, 2004-10-19 Lattice gas cellular automata LGCA and lattice Boltzmann models LBM are relatively new and promising methods for the numerical solution of nonlinear partial differential equations The book provides an introduction for graduate students and researchers Working knowledge of calculus is required and experience in PDEs and fluid dynamics is recommended Some peculiarities of cellular automata are outlined in Chapter 2 The properties of various LGCA and special coding techniques are discussed in Chapter 3 Concepts from statistical mechanics Chapter 4 provide the necessary theoretical background for LGCA and LBM The properties of lattice Boltzmann models and a method for their construction are presented in Chapter 5

The Cauchy Problem for Higher Order Abstract Differential Equations Ti-Jun Xiao, Jin Liang, 2013-12-11 The main purpose of this book is to present the basic theory and some recent de

developments concerning the Cauchy problem for higher order abstract differential equations $u^{(n)} + A u = f$ in E where A, Q, B are linear operators in a topological vector space E . Many problems in nature can be modeled as ACP. For example many initial value or initial boundary value problems for partial differential equations stemmed from mechanics physics engineering control theory etc can be translated into this form by regarding the partial differential operators in the space variables as operators A_i in some function space E and letting the boundary conditions if any be absorbed into the definition of the space E or of the domain of A_i . This idea of treating initial value or initial boundary value problems was discovered independently by E. Hille and K. Yosida in the forties. The theory of ACP is closely connected with many other branches of mathematics. Therefore the study of ACP is important for both theoretical investigations and practical applications. Over the past half a century ACP has been studied extensively.

Monte Carlo and Quasi-Monte Carlo Methods 2000 Kai-Tai Fang, Fred J. Hickernell, Harald Niederreiter, 2011-06-28 This book represents the refereed proceedings of the Fourth International Conference on Monte Carlo and Quasi Monte Carlo Methods in Scientific Computing which was held at Hong Kong Baptist University in 2000. An important feature are invited surveys of the state of the art in key areas such as multidimensional numerical integration low discrepancy point sets random number generation and applications of Monte Carlo and quasi Monte Carlo methods. These proceedings include also carefully selected contributed papers on all aspects of Monte Carlo and quasi Monte Carlo methods. The reader will be informed about current research in this very active field.
