NASA Technical Note, 1975 **The Influence of Surface Waves on Water Circulation in a Mid-Atlantic Continental-shelf Region** Charles H. Whitlock, Theodore A. Talay, 1974 The importance of wave induced currents in different weather conditions and water depths 18 3 m and 36 6 m is assessed in a mid Atlantic continental shelf region A review of general circulation conditions is conducted Factors which perturb the general circulation are examined using analytic techniques and limited experimental data Actual wind and wave statistics for the region are examined Relative magnitudes of the various currents are compared on a frequency of annual occurrence basis Results indicated that wave induced currents are often the same order of magnitude as other currents in the region and become more important at higher wind and wave conditions Wind wave and ocean swell characteristics are among those parameters which must be monitored for the analytical computation of continental shelf circulation
