

TOOLS OF THE SERIALS TRADE

Serials Automation for Acquisition and Inventory Control. Edited by William Gray Potter and Anne Harber Miller. Chicago: American Library Association, 1981. 181p. \$12.90. ISBN 0-8389-0267-0.

In September 1980, ALA's Library and Information Technology Association (LITA) sponsored a conference on serials automation emphasizing acquisition and operations. Jennifer Gough reported on the conference in *Serials Review*, 7:1 (January/March 1981). Selected edited papers from that conference have now been chosen for a paperback volume. Most papers are supplemented by excerpts from informal discussions that followed the original presentations. Also included are descriptions of serials control systems developed at four major universities and at the National Library of Medicine. Gary Pitsoa contributed an annotated bibliography of works on acquisition and inventory control of serials published since the 1967 bibliography on serials collections.

A certain degree of independence is the start of freedom in preparation of their talks is to be expected. As a result of the liberties taken by some of the papers' authors, however, the title of the volume is partially misleading. The actual emphasis of the published papers is in inventory control and, for that part, on the acquisition process which is devoted to checking and labeling. With the exception of one paper in which vendor selection is discussed, the papers discuss processing of serial publications once they have, in some undefined manner, found their way in the door. The initial acquisition process, from the check-in, which would include labeling, forwarding vendor correspondence, fund control and receiving consideration of the acquired, for the most part.

William Gray Potter mentions in his introduction that demonstrations of computer-aided serials processing systems developed by individual libraries and by commercial vendors were a central feature of the conference. Awareness of these demonstrations and the informal discussions which would have taken place are lacking from the published conference proceedings, as, indeed, they must be. This would help to explain (a) the lack of emphasis on serials acquisitions in the published proceedings while it would have been a central part of the conference itself.

A panel discussion about commercially available database systems was, however, included in *Serials Automation*. Moderated by Potter, it included speakers from OCLC, OCLD, OCLC and RUSHMORE. This discussion will be very useful to serials specialists who are interested in computerized serials services. The information presented is generally found only in promotional literature, by attending demonstrations or through similar panel discussions. Potter asked the speakers a series of specific questions to which each of them replied.

The questions included the following: "How will libraries pay for use of these tools? How does your system handle claims?" and "How does the serials check-in system fit in a year-over-all picture for serials management?" A candid comparison of commercially available check-in systems, largely presented, is to be found in the published which has never experienced a title change and that there would justify the price of *Serials Automation*.

The keynote speaker, Don Hensley, delivered a paper on the evolution of automated serials control in which he summarized the history of technological development leading to

computer-aided serials control. Perhaps the date does represent of serials automation in comparison with other library operations, he cites a number of developments in the past 100 years which will permit the design and implementation of online serials processing systems. One of the most crucial of these, in Hensley's view, was the construction of a national serials data base in the CONSER project as the publication of the ANSI standards for industry-wide holdings statements. The addition of a standard for detailed holdings statements is still needed and an ANSI subcommittee is working on this standard. For the serials specialist, the most immediate part of Hensley's paper will be the final portion dealing with a variety of assessments supporting automation of serials processing in libraries. These arguments would be valuable for having and for presentation to library administrators.

Many of the other papers describe computer-aided systems developed at various libraries. The differences greatly from one another and various priorities in developing computer-aided systems will vary, many which specific to library administrators want to know not how other libraries have automated their card files and manual procedures but about the basic questions which systems designers in any library should consider. It may interest readers or readers to hear how one library has solved its systems design problems or how it achieved some measure of success in automation. Such information may not be useful. It will be more useful to be given general guidelines or a basic philosophical perspective on serials automation. Some of the papers in *Serials Automation* will, for this reason, be more beneficial to serials librarians or system designers than will others. Volume Ventrone's paper, for example, provides a more practical perspective on automation of library records but does offer no value system than or some of the other conference papers.

In her paper, Ventrone reviews the development and current status of NOTIS (Northwestern Online Text Information System) which includes computer-aided serials control through circulation as well as photograph control. Description of a patron inquiry module called LUIS (Library User Information Service) is featured in her paper which is thoughtful, intelligent and critically readable. Ventrone discusses the reasoning behind design decisions made at Northwestern and comments are provided so that they will have general applicability to other libraries. Her comments on cost justification and cost model are especially impressive. She writes, for instance, that online catalogs should be "the simplest, cheapest per answer high while maintaining the quality of the product. Systems designed, however, to get some thing up and down this concept of their cost." A measure of how well users should be provided for comments about the structure of the card catalog which is its own strength, about the utility of the structure for the user, and about the structure in automating all structure for access by keyword alone.

Of particular interest is a brief summary of the development of Northwestern's online catalog. Her description of an online catalog that really works and is used by real people is thorough but understandable by anyone without programming experience. While it is a general discussion about an online catalog and not about serials catalogs or serials information specifically, it is well worth reading.

Ventrone's good sense and balanced presentation are impressive. She briefly touches on some criticisms of

Serials Automation For Acquisition And Inventory Control: Bestsellers in 2023 The year 2023 has witnessed a remarkable surge in literary brilliance, with numerous engrossing novels captivating the hearts of readers worldwide. Lets delve into the realm of top-selling books, exploring the engaging narratives that have captivated audiences this year. Serials Automation For Acquisition And Inventory Control : Colleen Hoover's "It Ends with Us" This heartfelt tale of love, loss, and resilience has gripped readers with its raw and emotional exploration of domestic abuse. Hoover expertly weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can triumph. Uncover the Best : Taylor Jenkins Reids "The Seven Husbands of Evelyn Hugo" This spellbinding historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reids absorbing storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Serials Automation For Acquisition And Inventory Control : Delia Owens "Where the Crawdads Sing" This mesmerizing coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens spins a tale of resilience, survival, and the transformative power of nature, captivating readers with its evocative prose and mesmerizing setting. These popular novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of compelling stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a exceptional and gripping novel that will keep you speculating until the very end. The novel is a warning tale about the dangers of obsession and the power of evil.
