Electronic Cataloging AACR2 and Metadata for Serials and Monographs is a collection of papers about recent developments in metadata and its practical applications in cataloging. Acknowledged experts examine a wide variety of techniques for managing serials and monographs using standards and schemas like MARC AACR2 ISSN ISBD and Dublin Core. From the broadest introduction of metadata usage to the revisions of AACR2 through 2000, this book offers vital analysis and strategy for achieving Universal Bibliographic Control. *Electronic Cataloging* is divided into three parts. The first is an introduction to metadata: what it is and its relationship to the library in general. The second portion focuses more on how metadata can be utilized by a library system and the possibilities in the near future. The third portion is very specific, dealing with individual standards of metadata and elements such as AACR2 and MARC, as well as current policies and prospects for the future. Information covered in *Electronic Cataloging* includes an overview of metadata and why it is important to the cataloging community, Universal Bibliographic Control: what has succeeded so far in cataloging and how metadata will evolve, the step-by-step process for creating an effective metadata repository for the community, the inherent problems that accompany cataloging nonprint research materials such as electronic serials and the Web, metadata schemas and the use of controlled vocabularies and classification systems, standards of metadata including MARC, Dublin Core, RDF and AACR2 with emphasis on the revisions and efforts made with AACR2 through 2000, an overview of the ISSN International Standard Number and its relationships to current codes and metadata standards including AACR2 and much more. *Electronic Cataloging* is the undertaking of three pioneers in library sciences: Sheila S. Intner, Sally C. Tseng, and Mary L. Larsgaard, who co-edited *Maps and Related Cartographic Materials Cataloging Classification and Bibliographic Control* (Haworth, 2000). With illustrations, references, additional reading lists, and case studies, this research tool offers you tips and strategies to make metadata work for you and your library. No one currently involved in information cataloging should be without this book. **Guide to the Cataloguing of the Serial Publications of Societies and Institutions** Library of Congress.
