Berry,2013-03-13 The interaction of neurotransmitters neuromodulators and neuroactive drugs with receptors localized at the cell surface initiates a chain of molecular events leading to integrated neuronal responses to the triggering stimuli Major advancements in the characterization and isolation of receptor molecules have answered many questions regarding the nature of the elements that determine the specificity in these interactions At the same time recent studies have provided evidence that delicate regulation by intracellular enzymatic systems determines the efficiency of the stimulus response coupling process mediates the interaction between receptors operates in feedback control mechanisms and transduces signals from the receptors to various effector sites in a highly coordinated fashion These studies are at the focus of the present volume which is an outcome of a symposium held at the University of Vermont College of Medicine on March 21-23 1986 in conjunction with the seventeenth annual meeting of the American Society for Neurochemistry The symposium has demonstrated clearly that the concerted efforts of investigators in neurophysiology biochemistry pharmacology cell biology molecular genetics neurology and psychiatry are required to achieve better understanding of the processes underlying neuronal responsiveness This volume includes contributions provided by prominent investigators in all these research areas We hope that the readers will find here a useful source of information and ideas for stimulating further studies which may serve to narrow the gap between basic neuroscience research and its clinical implications Goodman and Gilman's The Pharmacological Basis of Therapeutics ,1985 **Advances in Comparative and Environmental Physiology** Lawrence

C.H. Wang,2012-12-06 When survival is challenged by the cold animals react by employing both behavioral and physiological solutions Depending on the magnitude of the cold stress and the nature of the adjustment simple avoidance or sophisticated capacity or resistance compensations may be used Thus migration shelter seeking metabolic and insulative compensation torpor and freezing avoidance and tolerance are successful tactics used by diverse groups of animals To understand and appreciate the benefits of these tactics it is necessary to examine not only the well being of the whole animal but also their basic underlying mechanisms In addition it is also of fundamental importance to grasp how seasonal cold affects the survivorship and reproductive success of populations when confronted by a general reduction in primary productivity and an elevated energy cost for maintenance e.g. in endotherms In this regard a synthetic overview which integrates aspects of cell

biology biochemistry physiology neurobiology behavior and population biology should be a fruitful approach in providing a holistic understanding on how animals adapt to cold The present volume is an attempt to achieve such an overview its objective is to provide a depth and breadth of coverage that is essential to a full appreciation of animal adaptation to cold It is the hope of the contributing authors that this book will serve as an effective reference text for all senior undergraduate and graduate students as well as research scientists with an interest in cold physiology

Substance Abuse and Psychopathology Arthur Alterman,2014-07-08 Substance misuse and abuse exist in almost every human society In our western civilization the bulk of attention has focused on those individuals who specifically seek treatment or those who have become so disabled by these problems that they require treatment These individuals usually qualify for a psychiatric diagnosis of alcohol or other substance abuse However just as it has been recognized that primary substance abuse is frequently associated with other diagnosable psychiatric disorders such as sociopathy or attention deficit disorder residual type and that the origins of substance abuse are multivariate we have also begun to become aware that many other individuals in our society with psychiatric or other problems also suffer to varying degrees from substance abuse These problems may be considered secondary by various specialists or treatment personnel but nevertheless they are problems and what disorder is primary or secondary in a given individual may often be very difficult to determine in a meaningful fashion Thus within the past decade research studies have reported significant incidences of substance abuse or misuse in high school and college aged populations in medical populations and in individuals with other psychiatric disorders such as schizophrenia depression and the anxiety and personality disorders Yet to date little has been

done to bring together and systematize this widely scattered data that describes the presence of substance abuse problems in various populations

Recent Developments in Alcoholism Marc Galanter, 2013-11-27 From the President of the Research Society on Alcoholism In the last decade research concerning the causes and consequences of alcohol abuse and alcoholism has come of age We have witnessed a plethora of scientific findings that have shed light on some of the actions of alcohol at the molecular level Interesting new data have been forthcoming on the complexities of the development of tolerance to alcohol It is becoming increasingly appropriate to consider that tolerance to alcohol involves biological as well as psychological factors New scientific insights have been gained concerning the treatment of withdrawal as well as the presence of persistent withdrawal signs that may possibly be involved with relapse More recently new and compelling data indicating that alcoholism is a common familial disorder have appeared Clinical studies indicate that alcoholism is a heterogeneous disorder with multiformity in clinical symptomatology and genetic heterogeneity The heterogeneity of the clinical features and the heritability of the predisposing factors of alcoholism are currently under vigorous scientific investigation In the past several years sophisticated psychosocial studies have provided fundamental information on subjects at high risk for alcoholism Psychosocial and biological studies of families including alcoholics and subjects at high risk are likely to bring new insights to our understanding of etiological factors Moreover as a result of these studies we stand to develop better prevention initiatives and treatment approaches
