Shallow Flows Gerhard H. Jirka, Wim S.J. Uijtewaal, 2004-09-15 This text presents the key findings of the International Symposium held in Delft in 2003 which explored the process of shallow flows Shallow flows are found in lowland rivers lakes estuaries bays coastal areas and in density stratified atmospheres and may be observed in puddles as in oceans They impact on the life and work of a wide variety of readers who are here provided with a clear overview of the subject Shallow flows are intrinsically turbulent On one hand there are strongly three dimensional small scale turbulent motions and on the other hand large scale quasi two dimensional turbulence This book explains and examines these differences and their effects with sections on transport processes in shallow flows shallow jets wakes and mixing layers stratified and rotating flows in ocean and atmosphere river and channel flows and numerical modelling and turbulence closure techniques The reader is provided with the pick of current studies and a fresh approach to the subject with expert examination of a fascinating and crucial phenomenon of our world s water systems

Shock-Capturing Methods for Free-Surface Shallow Flows E. F. Toro, 2001-03-30 The first of its kind in the field this title examines the use of modern shock capturing finite volume numerical methods in the solution of partial differential equations associated with free surface flows which satisfy the shallow water type assumption including shallow water flows dense gases and mixtures of materials as special samples Starting with a general presentation of the governing equations for free surface shallow flows and a discussion of their physical applicability the book goes on to analyse the mathematical properties of the equations in preparation for the presentation of the exact solution of the Riemann problem for wet and dry beds After a general introduction to the finite volume approach several chapters are then devoted to describing a variety of modern shock capturing finite volume numerical methods including Godunov methods of the upwind and centred type Approximate Riemann solvers following various approaches are studied in detail as is their use in the Godunov approach for constructing low and high order upwind TVD methods Centred TVD schemes are also presented Two chapters are then devoted to practical applications The book finishes with an overview of potential practical applications of the methods studied along with appropriate reference to sources of further information Features include Algorithmic and practical presentation of the methods Practical applications such as dam break modelling and the study of bore reflection patterns in two space dimensions Sample computer programs and accompanying numerical software details available at www.numeritek.com The book is suitable for teaching postgraduate students of civil mechanical hydraulic and environmental engineering meteorology oceanography fluid mechanics and applied mathematics Selected portions of the material may also be useful in teaching final

River Flow 2016 George Constantinescu, Marcelo Garcia, Dan Hanes, 2016-06-22. Understanding and being able to predict fluvial processes is one of the biggest challenges for hydraulics and environmental engineers, hydrologists and other scientists interested in preserving and restoring the diverse functions of rivers. The interactions among flow, turbulence, vegetation, macroinvertebrates and other organisms as well as the transport and retention of particulate matter have important consequences on the ecological health of rivers. Managing rivers in an ecologically friendly way is a major component of sustainable engineering design, maintenance and restoration of ecological habitats. To address these challenges, a major focus of River Flow 2016 was to highlight the latest advances in experimental, computational and theoretical approaches that can be used to deepen our understanding and capacity to predict flow and the associated fluid-driven ecological processes, anthropogenic influences, sediment transport and morphodynamic processes. River Flow 2016 was organized under the auspices of the Committee for Fluvial Hydraulics of the International Association for Hydro-Environment Engineering and Research (IAHR). Since its first edition in 2002, the River Flow conference series has become the main international event focusing on river hydrodynamics, sediment transport, river engineering and restoration. Some of the highlights of the 8th International Conference on Fluvial Hydraulics were to focus on interdisciplinary research involving, among others, ecological and biological aspects relevant to river flows and processes and to emphasize broader themes dealing with river sustainability. River Flow 2016 contains the contributions presented during the regular sessions covering the main conference themes and the special sessions focusing on specific hot topics of river flow research and will be of interest to academics interested in hydraulics, hydrology and environmental engineering.

River Flow 2020 Wim Uijttewaalt, Mário J. Franca, Daniel Valero, Victor Chavarrias, Clàudia Ylla Arbós, Ralph Schielen, Alessandra Crosato, 2020-08-27. Rivers form one of the lifelines in our society by providing essential services such as availability of fresh water, navigation,

energy ecosystem services and flood conveyance Because of this essential role mankind has interfered continuously in order to benefit most and at the same time avoid adverse consequences such as flood risk and droughts This has resulted in often highly engineered rivers with a narrow set of functions In the last decades rivers are increasingly considered in a more holistic manner as a system with a multitude of interdependent processes River research and engineering has therefore added to the river fundamentals also themes like ecohydraulics consequences of climate change and urbanisation River Flow 2020 contains the contributions presented at the 10th conference on Fluvial Hydraulics River Flow 2020 organised under the auspices of the Committee on Fluvial Hydraulics of the International Association for Hydro Environment Engineering and Research IAHR What should have been a lively physical gathering of researchers students and practitioners was converted into an online event as the COVID 19 pandemic hindered international travelling and large gatherings of people Nevertheless the fluvial hydraulics community showed their interest and to be very much alive with a high number of participations for such event Since its first edition in 2002 in Louvain la Neuve this series of conferences has found a large and loyal audience in the river research and engineering community while being also attractive to the new researchers and young professionals This is highlighted by the large number of contributions applying for the Coleman award for young researchers and also by the number of applications and attendants to the Master Classes which are aimed at young researchers and students River Flow 2020 aims to provide an updated overview of the ongoing research in this wide range of topics and contains five major themes which are focus of research in the fluvial environment river fundamentals the digital river the healthy river extreme events and rivers under pressure Other highlights of River Flow 2020 include the substantial number of interdisciplinary subthemes and sessions of special interest The contributions will therefore be of interest to academics in hydraulics hydrology and environmental engineering as well as practitioners that would like to be updated about the newest findings and hot themes in river research and engineering

Sprayed Concrete Lined Tunnels Alun Thomas, 2008-10-08 Practising engineers on site in the design office or in client organizations will find this book an excellent introduction to the design and construction of sprayed concrete lined SCL tunnels The complex behaviour of the early age behaviour of the sprayed concrete requires careful management This book covers all aspects of SCL tunnelling from the constituents of sprayed concrete to detailed design and management during construction Although there is a close interdependence between all the facets of sprayed concrete few engineers have the right breadth of experience and expertise and this urgently needs to be transferred to the wider engineering community Disseminating essential information for tunnelling engineers *Sprayed Concrete Lined Tunnels* is key reading for all involved in or studying the process
