Formational Units in Sign Languages Rachel Channon, Harry van der Hulst, 2011-10-27 Sign languages and spoken languages have an equal capacity to communicate our thoughts Beyond this however while there are many similarities there

are also fascinating differences caused primarily by the reaction of the human mind to different modalities but also by some important social differences The articulators are more visible and use larger muscles with consequent greater effort It is difficult to visually attend to both a sign and an object at the same time Iconicity is more systematic and more available in signs The body especially the face plays a much larger role in sign Sign languages are more frequently born anew as small groups of deaf people come together in villages or schools Sign languages often borrow from the written form of the surrounding spoken language producing fingerspelling alphabets character signs and related signs This book examines the effects of these and other differences using observation experimentation and theory The languages examined include Asian Middle Eastern European and American sign languages and language situations include home signers and small village signers children gesturers adult signers and non native signers

The Crisis of Method in Contemporary Analytic Philosophy Avner Baz, 2017-12-08 Avner Baz offers a critique of leading work in mainstream analytic philosophy and in particular challenges assumptions underlying recent debates concerning philosophical method In the first part of *The Crisis of Method* Baz identifies fundamental confusions about what the widely employed philosophical method of cases is supposed to accomplish and how He then argues that the method as commonly employed by both armchair and experimental philosophers is underwritten by substantive and poorly supported representationalist assumptions about language assumptions to which virtually all of the participants in the recent debates over philosophical method have shown themselves committed In the second part of the book Baz challenges those assumptions both philosophically and empirically Drawing on Austin Wittgenstein and Merleau Ponty as well as on empirical studies of first language acquisition he presents and motivates a broadly pragmatist conception of language on which the method of cases as commonly practiced is fundamentally misguided more misguided than even its staunchest critics have hitherto recognized

Wednesday Is Indigo Blue Richard E. Cytowic, David M. Eagleman, 2011-09-30 Revealing the neuroscience and genetics behind synesthesia and how this multi sensory phenomenon changed our view of the brain A person with synesthesia might feel the flavor of food on her fingertips sense the letter J as shimmering magenta or the number 5 as emerald green hear and taste her husband's voice as buttery golden brown Synesthetes rarely talk about their peculiar sensory gift believing either that everyone else senses the world exactly as they do or that no one else does Yet synesthesia occurs in 1 in 20 people and is even more common among artists One famous synesthete was novelist Vladimir Nabokov who insisted as a toddler that the colors on his wooden alphabet blocks were all wrong His mother understood exactly what he meant because she too had synesthesia Nabokov's son Dmitri who recounts this tale in the afterword to this book is also a synesthete further illustrating how synesthesia runs in families *Wednesday Is Indigo Blue* reveals how the extraordinary multisensory phenomenon of synesthesia has changed our traditional view of the brain Because synesthesia contradicted existing theory researcher Richard Cytowic spent 20 years persuading colleagues that it was a real and important brain phenomenon rather than a mere curiosity Today scientists in 15 countries are exploring synesthesia and how it is changing the traditional view of how the brain works Cytowic and neuroscientist David Eagleman argue that perception is already multisensory though for most of us its multiple dimensions exist beyond the reach of consciousness Reality they point out is more subjective than most people realize No mere curiosity synesthesia is a window on the mind and brain highlighting the amazing differences in the way people see the world
