Nanomaterials: Design and Simulation Perla Balbuena,Jorge M. Seminario,2006-11-02 Over the past few decades several approaches have been developed for designing nano structured or molecularly structured materials These advances have revolutionized practically all fields of science and engineering providing an additional design variable the feature size of the nano structures which can be tailored to provide new materials with very special characteristics Nanomaterials Design and Simulation explores the role that such advances have made toward a rational design of nanostructures and covers a variety of methods from ab initio electronic structure techniques ab initio molecular dynamics to classical molecular dynamics also being complemented by coarse graining and continuum methods Also included is an overview of how the development of these computational tools has enabled the possibility of exploring nanoscopic details and using such information for the prediction of physical and chemical properties that are not always possible to be obtained experimentally Provides an overview of approaches that have been developed for designing nano structured or molecularly structured materials This volume covers several aspects of the simulation and design of nanomaterials analyzed by a selected group of active researchers in the field Looks at how the advancement of computational tools have enabled nanoscopic prediction of physical and chemical properties Chemical Sensors and Biosensors Rene Lalauze,2012-12-17 Technological needs for chemical ionic and biological species detection are giving rise to continuous research and development in physico chemistry and biology The constant progress being made in the theoretical and technological aspects concerning studies and developments of chemical sensors biosensors and biochips is presented in this book by different scientists and professors from different universities and constitutes an updating of the state of the art for chemical sensors biosensors and biochips This book places a large emphasis on interaction between chemical and biological species in a gaseous or liquid state and details mineral and biological materials acting as sensitive elements The role of electrical electrochemical piezoelectric and optical transducers in detection mechanisms are presented through their developments and from a performance point of view Micro reactors nanotechnologies and flexible substrates are considered in relation to their role in neural networks

Dynamics of Molecule Surface Interaction Gert Due Billing,2000-01-03 Chemical reactions at surfaces do not follow the same reaction dynamics as atoms in the gas phase The changes from ideal interactions depend on the electronic structure and the spatial and geometric shape of the surface The dynamics of chemical reactions at surfaces have all the complexity of gas phase molecules reaction dynamics plus those associated with the additional phenomena due to the presence of a solid surface *Report of the Board of Education* Connecticut.
