Fisheries, Quota Management and Quota Transfer Gordon M. Winder,2017-07-11 This volume examines the impact of fish stock assessment and catch share arrangements in context through case studies and in terms of ecosystem economy and society It examines the rationalizing work of bio economic projects especially the institutionalization of individual transferable quota ITQ in fisheries what impact have they had on fisheries and fishers The contributing authors understand ITQ and quota management as bio economic projects that is as widely deployed but locally constituted projects that combine biological and economic logics to rationalize production and in this case fish Politicians and managers use these projects and the models that justify them to rationalize fisheries in favor of modern technology and for capital and species efficiency Aimed at a diverse interdisciplinary fisheries management readership and designed as a guide to issues emerging in any assessment of ITQ the book is a timely investigation of the origins and diverse experiences of ITQ projects including resistance to them attempts to develop fisheries management around them and experiences of the risks that come with them Now around forty years old ITQ has never been subject to the kind of comprehensive sustainability assessments once advocated by Elinor Ostrom let alone the full cost accounting of impacts at the national level that Evelyn Pinkerton recently called for Fisheries Quota Management and Quota Transfer offers multi disciplinary assessments of the effects of ITQ from scholars working in eight countries The book brings together scholars from anthropology economics geography sociology the history of science and marine environmental history to discuss experiences from fisheries in eight industrialized countries It considers cases

from outside as well as inside the EU including ITQ pioneers New Zealand and Iceland The combination allows for an unprecedented international perspective on stock assessments and share allocation systems By emphasizing emerging becoming learning and transforming through knowledge the book conceives technology as a field of power and choice nevertheless dominated by managers through specific projects in specific contexts Individual chapters relate bio economic projects to separate theoretical literature an approach that facilitates multi disciplinary dialog

Saving Global Fisheries J. Samuel Barkin,Elizabeth R. Desombre,2013-01-18 A proposal for a new global approach for fisheries focused on reducing fishing capacity and providing incentives for long term sustainability The Earth s oceans are overfished despite more than fifty years of cooperation among the world s fishing nations There are too many boats chasing too few fish In *Saving Global Fisheries* J Samuel Barkin and Elizabeth DeSombre analyze the problem of overfishing and offer a provocative proposal for a global regulatory and policy approach Existing patterns of international fisheries management try to limit the number of fish that can be caught while governments simultaneously subsidize increased fishing capacity focusing on fisheries as an industry to be developed rather than on fish as a resource to be conserved Regionally based international management means that protection in one area simply shifts fishing efforts to other species or regions Barkin and DeSombre argue that global rather than regional regulation is necessary for successful fisheries management and emphasize the need to reduce subsidies They propose an international system of individual transferable quotas that would give holders of permits an interest in the long term health of fish stocks and help create a sustainable level of fishing capacity globally
