Sharks Hb:

A Bibliography of Sharks and Related Species, 1987 The Sharks of North America Jose I. Castro, 2011-07-28 A complete reference to all the sharks inhabiting North American waters with excellent color illustrations of all the species

Sharks of the Open Ocean Merry D. Camhi, Ellen K. Pikitch, Elizabeth A. Babcock, 2009-01-21 This important and exciting title represents the first authoritative volume focussed on pelagic open ocean sharks as a group. Virtually every pelagic shark expert in the world has contributed to this landmark publication which includes the latest data and knowledge on pelagic shark biology, fisheries management and conservation. Pelagic sharks face unprecedented levels of exploitation in all the world's oceans through both direct fisheries and by catch, and effective management for these species is contingent upon solid science and data which this book brings together for the first time. All those involved in shark biology will need to have a copy of this book.

Sharks Gene Helfman, George H. Burgess, 2014-05-15 Do sharks lay eggs or give birth to live young? Do sharks sleep? How long do they live? How likely are shark attacks? This book answers your questions about some of nature's most misunderstood animals. Answering every conceivable question about sharks, authors Gene Helfman and George H. Burgess describe the fascinating biology, behavior, diversity, and there are more than 1,000 species worldwide and cultural importance of sharks, their close relationship to skates and rays, and their critical role in healthy ecosystems. Helfman and Burgess take readers on a round the world tour of shark habitats which include oceans as well as lakes and even rivers as far up the Mississippi as St. Louis. They describe huge ferocious predators like Great White and Tiger sharks and species such as Basking and Whale sharks that feed on microscopic prey yet can grow to lengths of more than 40 feet. The mysterious and powerful Greenland shark, the authors explain, reaches a weight of 2,200 pounds on a diet of seal flesh. Small, less than 2 foot long Cookiecutter sharks attack other sharks and even take a chunk out of the occasional swimmer. Despite our natural fascination with sharks, we have become their worst enemy. Many shark species are in serious decline and a number are threatened with extinction as a result of overfishing and persecution.

Sharks: The Animal Answer Guide presents a perfect mix of current science, history, anthropology, intriguing facts, and gripping photographs. Whether your fascination with sharks stems from fear or curiosity, your knowledge of these animals will improve immensely when you consult this book.
