Songs of the Arabian Red Sea Dionisius A. Agius, Muhammad Zafer Alhazmi, Hasan Hujairi, 2025-07-24 Song and music have always played an important part in the cultural identity of the mariners and coastal peoples of the Red Sea While previous studies on the maritime culture of this region have focused on the sailing vessel the dhow and seafaring communities this is the first book to examine its rich musical repertoire Using fieldwork conducted along the Hijaz and Upper Tihama coasts The Songs of the Arabian Red Sea documents examples of different musical forms and styles as well as the stories of older mariners who describe the contexts in which songs were sung from sea shanties during the working day to soulful ballads about home and loved ones at night Presenting the songs and their lyrics in the context of the geography culture oral history and musicology of the region the book reveals the complex and connected network that influenced their development and the vital place of song and music for diverse communities of the region The Hamiltonian ,1916

Manx Notes and Queries Charles Roeder, 1904 **The Neuroethology of Birdsong** Jon T. Sakata, Sarah C. Woolley, Richard R. Fay, Arthur N. Popper, 2020-03-19 Vocal signals are central for social communication across a wide range of vertebrate species consequently it is critical to understand the mechanisms underlying the learning control and evolution of vocal communication Songbirds are at the forefront of research into such neural mechanisms Indeed songbirds provide a particularly important model system for this endeavor because of the many parallels between birdsong and human speech Specifically 1 songbirds are one of the few vertebrate species that like humans learn their vocal signals during development 2 the processes of song learning and control in songbirds shares many parallels with the process of speech acquisition in humans and 3 there exist deep homologies between the circuits for the learning control and processing of vocal signals across songbirds and humans In addition because of the diversity of songbirds and song learning strategies songbirds offer a powerful model system to use the comparative method to reveal mechanisms underlying the evolution of song learning and production Taken together research on songbirds can not only reveal general principles underlying vertebrate vocal communication but can also provide insight into potential mechanisms underlying the learning control and processing of speech This volume will cover a range of topics in birdsong spanning multiple level of analysis Chapters will be authored by the world s leading experts on birdsong and will provide comprehensive reviews of the processes underlying song learning of the neural circuits for song learning and control as well as for the extraction and processing of song information of the selection pressures underlying song evolution and of genetic and molecular mechanisms underlying the learning and evolution of song The primary goals of this volume are to provide comprehensive integrative and comparative perspectives on birdsong and to underscore the importance of birdsong to biomedical research evolutionary biology and behavioral

systems and computational neuroscience The target audience of this volume will be graduate students postdoctoral fellows and established academics and neuroscientists who are interested in mechanisms of communication from an integrative and comparative perspective The volume is intended to function as a high profile and contemporary reference on current work related to the learning control processing and evolution of birdsong This volume will have broad appeal to comparative and sensory biologists neurophysiologists and behavioral systems and cognitive neuroscientists who attend meetings such as the Society for Neuroscience the International Society for Neuroethology and the Society for Integrative and Comparative Biology Because of the relevance of birdsong research to understanding human speech it is likely that the volume will also be of interest to speech researchers and clinicians researching communication motor and sensory processing disorders

Performance Action Paula Serafini,2018-03-20 Performance Action looks to advance the understanding of how art activism works in practice by unpacking the relationship between the processes and politics that lie at its heart Focusing on the UK but situating its analysis in a global context of art activism the book presents a range of different cases of performance based art activism including the anti oil sponsorship performances of groups like Shell Out Sounds and BP or not BP the radical pedagogy project Shake the psychogeographic practice of Loiterers Resistance Movement and the queer performances of the artist network Left Front Art Based on participatory ethnographic research Performance Action brings together a wealth of first hand accounts and interviews followed by in depth analysis of the processes and politics of art activist practice The book is unique in that it adopts an interdisciplinary approach that borrows concepts and theories from the fields of art history aesthetics anthropology sociology and performance studies and proposes a new framework for a better understanding of how art activism works focusing on processes The book argues that art activism is defined by its dual nature as aesthetic political practice and that this duality and the way it is manifested in different processes from the building of a shared collective identity to the politics of participation is key towards fully understanding what sets apart art activism from other forms of artistic and political practice The book is aimed at both specialist and non specialist audiences offering an accessible and engaging way into new theoretical contributions in the field of art activism as well as on wider subjects such as participation collective identity prefiguration and institutional critique

Hopi Journal of Alexander M. Stephen Alexander MacGregor Stephen,1936 The Ascent of Birds John Reilly,2018-04-16 When and where did the ancestors of modern birds evolve What enabled them to survive the meteoric impact that wiped out the dinosaurs How did these early birds spread across the globe and give rise to the 10 600 plus species we recognise today from the largest ratites to the smallest hummingbirds Based on the latest scientific discoveries and enriched by personal observations The Ascent of Birds sets out to answer these fundamental questions The Ascent of

Birds is divided into self contained chapters or stories that collectively encompass the evolution of modern birds from their origins in Gondwana over 100 million years ago to the present day The stories are arranged in chronological order from tinamous to tanagers and describe the many dispersal and speciation events that underpin the world's 10 600 plus species Although each chapter is spearheaded by a named bird and focuses on a specific evolutionary mechanism the narrative will often explore the relevance of such events and processes to evolution in general The book starts with The Tinamou's Story which explains the presence of flightless birds in South America Africa and Australasia and dispels the cherished role of continental drift as an explanation for their biogeography It also introduces the concept of neoteny an evolutionary trick that enabled dinosaurs to become birds and humans to conquer the planet The Vegavis's Story explores the evidence for a Cretaceous origin of modern birds and why they were able to survive the asteroid collision that saw the demise not only of dinosaurs but of up to three quarters of all species The Duck's Story switches to sex why have so few species retained the ancestral copulatory organ Or put another way why do most birds exhibit the paradoxical phenomenon of penis loss despite all species requiring internal fertilisation The Hoatzin's Story reveals unexpected oceanic rafting from Africa to South America a stranger than fiction means of dispersal that is now thought to account for the presence of other South American vertebrates including geckos and monkeys The latest theories underpinning speciation are also explored The Manakin's Story for example reveals how South America's extraordinarily rich avifauna has been shaped by past geological oceanographic and climatic changes while The Storm Petrel's Story examines how species can evolve from an ancestral population despite inhabiting the same geographical area The thorny issue of what constitutes a species is discussed in The Albatross's Story while The Penguin's Story explores the effects of environment on phenotype in the case of the Emperor penguin the harshest on the planet Recent genomic advances have given scientists novel approaches to explore the distant past and have revealed many unexpected journeys including the unique overland dispersal of an early suboscine from Asia to South America The Sapayoa's Story and the blackbird's ancestral sweepstakes dispersals across the Atlantic The Thrush's Story Additional vignettes update more familiar concepts that encourage speciation sexual selection The Bird of Paradise's Story extended phenotypes The Bowerbird's Story hybridisation The Sparrow's Story and great speciators The White-eye's Story Finally the book explores the raft of recent publications that help explain the evolution of cognitive skills The Crow's Story plumage colouration The Starling's Story and birdsong The Finch's Story
