Simultaneous Engineering Methodologies And Applications:

Simultaneous Engineering U. Roy, John Usher, Hamid R. Parsaei, 1999-05-11 This book covers recent advances in simultaneous engineering and contemporary issues related to the development and implementation of successful systems The scope of material includes recent research related to simultaneous engineering problem solving architectures organizational issues tools and techniques of simultaneous engineering design methods and application of artificial intelligence and numeric tools

Concurrent Engineering Peihua Gu, Andrew Kusiak, 1993 Hardbound Increasing global competition in a product oriented industry has required manufacturing enterprises to continuously improve product quality functionality and features as well as implementing a reduction in product cost and time to market The traditional approach to product development requires a substantial amount of time to evolve the product design from its initial configuration to the final product Since 70% or more of the total product cost is determined in the design stages significant potential savings can be achieved by improving traditional design practices Because of its effectiveness and great potential in product design concurrent engineering CE is attracting great interest from both industry and academia The thirteen research papers in this volume provide a current overview on progress in concurrent engineering Divided into two parts Part I primarily focuses on methodology and applications of CE while Part II dis

Concurrent Engineering Techniques and Applications C. T. Leondes, 2014-12-01 Concurrent Engineering Techniques and Applications reviews advances in concurrent engineering techniques and applications An in depth treatment of the quantitative and economic aspects of concurrent engineering is presented with emphasis on techniques for measuring the performances of concurrent engineering and for comparing its economic effectiveness with that of traditional engineering Open systems software standards in concurrent engineering are also discussed Comprised of 12 chapters this volume begins with an introduction to techniques for measuring the performances of concurrent engineering and for comparing its economic effectiveness with that of traditional engineering The next chapter deals with open systems software standards and how to use open systems products effectively in concurrent engineering The discussion then turns to concurrent product design and manufacturing the essential issues involved in design decision support in concurrent simultaneous engineering design for manufacturing and assembly and concurrent engineering in electro optical systems and the use of visualization in concurrent engineering The use of multimedia presentation techniques and technology in the concurrent engineering process is also considered along with techniques in technical documentation This monograph will be useful to students academicians practicing professionals and research workers

Architecting Networked Engineered Systems Jelena Milisavljevic-Syed, Janet K. Allen, Sesh Commuri, Farrokh Mistree, 2020-02-25 In this monograph the authors demonstrate how the integration of adaptability operability and re configurability in the design of complex systems is indispensable for the further digitization of engineering systems in smart manufacturing Globalization of the customer base has resulted in distributed and networked manufacturing systems

However current design methods are not suitable to address variations in product design changes in production scale or variations in product quality necessitated by dynamic changes in the market. Adaptability, operability and reconfigurability are key characteristics that are necessary to address the limitations of the current methods used to design networked manufacturing systems. In recent years the digital transformation driving Industry 4.0 has had an enormous impact on globally distributed manufacturing. Digitalisation, the integration of digital technology into networked engineered systems, is increasingly being adopted to respond to changes in the market. This is achieved by means of: a) the concurrent design of adaptable systems, b) addressing flexibility in design parameters, c) conducting an operability analysis, and d) employing a reconfiguration strategy to address faults and variances in product quality and re-establish connectivity among the elements in the system. The design of manufacturing systems in the age of Industry 4.0 is addressed in this monograph. The authors introduce the concept of a smart platform and a computational framework for the digitalization of networked manufacturing systems. They also suggest how the framework and techniques in this monograph are applicable beyond the manufacturing domain for architecting networked engineered systems in other industries such as chemical processes and health care that are being transformed through the adoption of the Industry 4.0 construct.

Integrated Design of Multiscale, Multifunctional Materials and Products David L. McDowell, Jitesh Panchal, Hae-Jin Choi, Carolyn Seepersad, Janet Allen, Farrokh Mistree, 2009-09-30. Integrated Design of Multiscale Multifunctional Materials and Products is the first of its type to consider not only design of materials but concurrent design of materials and products. In other words, materials are not just selected on the basis of properties but the composition and/or microstructure is designed to satisfy specific, ranged sets of performance requirements. This book presents the motivation for pursuing concurrent design of materials and products, thoroughly discussing the details of multiscale modeling and multilevel robust design, and provides details of the design methods, strategies, along with selected examples of designing material attributes for specified system performance. It is intended as a monograph to serve as a foundational reference for instructors of courses at the senior and introductory graduate level in departments of materials science and engineering, mechanical engineering, aerospace engineering, and civil engineering who are interested in next generation systems based design of materials. First of its kind to consider not only design of materials but concurrent design of materials and products. Treatment of uncertainty via robust design of materials. Integrates the materials by design approach of Olson QuesTek LLC with the materials selection approach of Ashby Granta. Distinguishes the processes of concurrent design of materials and products as an overall systems design problem from the field of multiscale modeling. Systematic mathematical algorithms and methods are introduced for robust design of materials rather than ad hoc heuristics; it is oriented towards a true systems approach to design of materials and products.

Advanced Manufacturing Systems Joseph Sarkis, Hamid R. Parsaei, 1999-08-19. Serving as a reference and guide to both practitioners and researchers involved in the planning, control, and management of advanced manufacturing systems.

Advanced Manufacturing Systems Strategic Management and Implementation offers information on a wide range of available methodologies and tools. The contents are organized into four parts: Global Strategic Issues, Evaluation, Selection and Adoption of the Systems, Implementation Issues, and Control and Support. Theoretical and practical, analytical and empirical, this is a valuable resource for those interested in researching or implementing these systems into their organizations.

ICoRD'13 Amaresh Chakrabarti, Raghu V. Prakash, 2013-01-12 This book showcases over 100 cutting edge research papers from the 4th International Conference on Research into Design ICoRD 13, the largest in India in this area, written by eminent researchers from over 20 countries on the design process methods and tools for supporting global product development. The special features of the book are the variety of insights into the GPD process and the host of methods and tools at the cutting edge of all major areas of design research for its support. The main benefit of this book for researchers in engineering design and GPD is access to the latest quality research in this area for practitioners and educators; it is exposure to an empirically validated suite of methods and tools that can be taught and practiced.

Integration of CAD/CAPP/CAM Jianbin Xue, 2018-07-23 The book introduces the fundamentals and development of Computer aided design, Computer aided process planning and Computer aided manufacturing. The integration of CAD, CAPP, CAM, product data management and Concurrent engineering and collaborative design etc. are also illustrated in detail, which make this book be an essential reference for graduate students, scientists and practitioners in the research fields of computer sciences and engineering.

Manufacturing Process Selection Handbook K. G. Swift, J. D. Booker, 2013-02-15 Manufacturing Process Selection Handbook provides engineers and designers with process knowledge and the essential technological and cost data to guide the selection of manufacturing processes early in the product development cycle. Building on content from the authors' earlier introductory Process Selection guide, this expanded handbook begins with the challenges and benefits of identifying manufacturing processes in the design phase and appropriate strategies for process selection. The bulk of the book is then dedicated to concise coverage of different manufacturing processes, providing a quick reference guide for easy comparison and informed decision making. For each process examined, the book considers key factors driving selection decisions, including: Basic process descriptions with simple diagrams to illustrate; Notes on material suitability; Notes on available process variations; Economic considerations such as costs and production rates; Typical applications and product examples; Notes on design aspects and quality issues. Providing a quick and effective reference for the informed selection of manufacturing processes with suitable characteristics and capabilities, Manufacturing Process Selection Handbook is intended to quickly develop or refresh your experience of selecting optimal processes and costing design alternatives in the context of concurrent engineering. It is an ideal reference for those working in mechanical design across a variety of industries and a valuable learning resource for advanced students undertaking design modules and projects as part of broader engineering programs. Provides manufacturing process information maps. PRIMAs provide

detailed information on the characteristics and capabilities of 65 processes in a standard format Includes process capability charts detailing the processing tolerance ranges for key material types Offers detailed methods for estimating costs both at the component and assembly level *Multi-objective Evolutionary Optimisation for Product Design and Manufacturing* Lihui Wang, Amos H. C. Ng, Kalyanmoy Deb, 2011-09-06 With the increasing complexity and dynamism in today's product design and manufacturing more optimal robust and practical approaches and systems are needed to support product design and manufacturing activities Multi objective Evolutionary Optimisation for Product Design and Manufacturing presents a focused collection of quality chapters on state of the art research efforts in multi objective evolutionary optimisation as well as their practical applications to integrated product design and manufacturing Multi objective Evolutionary Optimisation for Product Design and Manufacturing consists of two major sections The first presents a broad based review of the key areas of research in multi objective evolutionary optimisation The second gives in depth treatments of selected methodologies and systems in intelligent design and integrated manufacturing Recent developments and innovations in multi objective evolutionary optimisation make Multi objective Evolutionary Optimisation for Product Design and Manufacturing a useful text for a broad readership from academic researchers to practicing engineers
