Rabek, 1978 **Singlet Oxygen, Reactions with Organic Compounds and Polymers**, 1978 **Environmental Toxicology and Chemistry of Oxygen Species** Irena Kruk, 1997-11-06 Properties sources of formation reactions and detection of oxygen species form the first part of this volume Biochemical toxicological and environmental aspects are dealt with in detail in the following chapters This information provides the basis for a state of the art understanding of the role of oxygen species in environmental pollution and as a health hazard **Singlet O2: Polymers and biomolecules**, 1985 **A Catalog of Data Compilations on Photochemical and Photophysical Processes in Solution** James G. Brummer, W. Phillip Helman, Alberta B. Ross, 1980 Polymer Photodegradation J.F. Rabek, 2012-12-06 During the last two decades the production of polymers and plastics has been increasing rapidly In spite of developing new polymers and polymeric materials only 40 60 are used commercially on a large scale It has been estimated that half of the annual production of polymers is employed outdoors The photochemical instability of most polymers limits their outdoor application as they are photodegraded quickly over periods from months to a few years To the despair of technologists and consumers alike photodegradation and environmental ageing of polymers occur much faster than can be expected from knowledge collected in laboratories In order to improve polymer photostability there has been a very big effort during the last 30 years to understand the mechanisms involved in photodegradation and environmental ageing This book represents the author's attempt based on his 25 years experience in research on photodegradation and photo stabilization to collect and generalize a number of available data on the photodegradation of polymers The space limitation and the tremendous number of publications in the past two decades have made a detailed presentation of all important results and data difficult The author apologizes to those whose work has not been quoted or widely presented in this book Because many published results are very often contradictory it has been difficult to present a fully critical review of collected knowledge without antagonizing authors For that reason all available theories mechanisms and different suggestions have been presented together and only practice can evaluate which of them are valid **Lasers in Polymer Science and Technology** Jan F. Rabek, Jean-Pierre Fouassier, 1989-11-30 The purpose of this 4 volume set is to examine some of the applications of lasers in polymer science and technology Information on this fascinating subject is compiled and presented in compact form This set focuses on current research and developments in the application of lasers in polymer and biopolymer chemistry It includes experimental and theoretical details apparatus techniques and applications This set is a useful source for researchers students polymer chemists and physicists involved in this astonishing field of high technology **Active Oxygen in Chemistry** Christopher S.
