Singularities Proc Of The Ima 1986:

Singularities and Groups in Bifurcation Theory Martin Golubitsky, Ian Stewart, David G. Schaeffer, 2012-12-06
Bifurcation theory studies how the structure of solutions to equations changes as parameters are varied. The nature of these changes depends both on the number of parameters and on the symmetries of the equations. Volume I discusses how singularity theoretic techniques aid the understanding of transitions in multiparameter systems. This volume focuses on bifurcation problems with symmetry and shows how group theoretic techniques aid the understanding of transitions in symmetric systems. Four broad topics are covered: group theory and steady state bifurcation, equivariant singularity theory, Hopf bifurcation with symmetry and mode interactions. The opening chapter provides an introduction to these subjects and motivates the study of systems with symmetry. Detailed case studies illustrate how group theoretic methods can be used to analyze specific problems arising in applications.

Singularities in Fluids, Plasmas and Optics Russel Caflisch, George C. Papanicolaou, 2012-12-06
Singularities in Fluids, Plasmas and Optics, which contains the proceedings of a NATO Workshop held in Heraklion, Greece, in July 1992, provides a survey of the state of the art in the analysis and computation of singularities in physical problems drawn from fluid mechanics, plasma physics, and nonlinear optics. The singularities include curvature singularities on fluid interfaces, the onset of turbulence in 3-D inviscid flows, focusing singularities for laser beams, and magnetic reconnection. The highlights of the book include the nonlinear Schrödinger equation for describing laser beam focusing, the method of complex variables for the analysis and computation of singularities on fluid interfaces, and studies of singularities for the 3-D Euler equations. The book is suitable for graduate students and researchers in these areas.

Singularities University of Minnesota. Institute for Mathematics and Its Applications, 1989
Covers the proceedings of the Institute for Mathematics and Its Applications Participating Institutions Conference on Singularities held at the University of Iowa in July 1986. Suitable for researchers in various aspects of singularity theory, this work provides an overview of the state of singularity theory and details work in several subareas.

Proceedings of the Estonian Academy of Sciences, Physics and Mathematics, 1999-06

Geometric topology William Hilal Kazez, 1997
This is Part 2 of a two-part volume reflecting the proceedings of the 1993 Georgia International Topology Conference held at the University of Georgia during the month of August. The texts include research and expository articles and problem sets. The conference covered a wide variety of topics in geometric topology. Kirby's problem list, which contains a thorough description of the progress made on each of the problems and includes a very complete bibliography, makes the work useful for specialists and non-specialists who want to learn about the progress made in many areas of topology. This list may serve as a reference work for decades to come. Gabai's problem list, which focuses on foliations and laminations of 3-manifolds, collects for the first time in one paper definitions, results, and problems that may serve as a defining source in the subject area.

Variational Methods BERESTYCKI, 2012-12-06 In the framework of the Année non linéaire the special nonlinear year sponsored by the C N R S the French National Center for Scientific Research a meeting was held in Paris in June 1988 It took place in the Conference Hall of the Ministère de la Recherche and had as an organizing theme the topic of Variational Problems Nonlinear analysis has been one of the leading themes in mathematical research for the past decade The use of direct variational methods has been particularly successful in understanding problems arising from physics and geometry The growth of nonlinear analysis is largely due to the wealth of applications from various domains of sciences and industrial applications Most of the papers gathered in this volume have their origin in applications from mechanics the study of Hamiltonian systems from physics from the recent mathematical theory of liquid crystals from geometry relativity etc Clearly no single volume could pretend to cover the whole scope of nonlinear variational problems We have chosen to concentrate on three main aspects of these problems organizing them roughly around the following topics 1 Variational methods in partial differential equations in mathematical physics 2 Variational problems in geometry 3 Hamiltonian systems and related topics
