An excellent, readable, bright guide to the night sky. *Dara O Briain* A superb introduction to astronomy. *Chris Packham* **Philippine Education Magazine**, 1906 *Star-land* Robert Stawell Ball, 1889 **The Christian Sky** Mark Edward Dodson, 2004 Why live under a pagan sky? For thousands of years humankind has dwelled under a dome of stars that have been grouped and identified according to ancient superstitions. Today the official star constellations pay homage to the pagan gods and goddesses of a dark and chaotic world, a world before Christ, and yet these are the constellations that scouting groups and school children all around the world have been encouraged to learn for hundreds of years. Now for the first time the sky has been mapped in accordance with easy-to-find star patterns that tell the stories of the Christian faith. No telescope required. No sophisticated instruments needed. After presenting a few simple but very effective techniques for finding your way through the sky at night, the author takes you on a tour of the Christian constellations. Using new constellations inspired by stories from the Bible, you will be able to locate stars, planets, star clusters and galaxies during any time of the night and at any time of the year. If you have ever wanted to know more about God's grandest creation but have never felt comfortable learning about ancient pagan idols, then this book will provide you with a healthy fresh start.

Brotherhood of Locomotive Firemen and Enginemen's Magazine, 1928 *The Classification of Stars* Carlos Jäschke, Mercedes Jäschke, 1990-07-26 The classification of stars into their various types is one of the fundamental areas of astronomy. This book is a comprehensive handbook on the tools, methods and results of stellar taxonomy. Although this subject is firmly rooted in classical astronomy, vast improvements in observational techniques have transformed the subject and greatly broadened the wavelength regions available for study. The first six chapters describe modern methods of spectroscopic and photometric classification. The remaining nine chapters describe particular families of stars, progressing from the hottest to the coolest. Within each category, a description is given of the normal type and all the peculiar stars. Throughout, the emphasis is on the phenomenology of classification rather than the underlying astrophysics. Both authors have devoted themselves to developing the international centre for stellar data at Strasbourg, which uniquely qualifies them to write this definitive handbook for professional astronomers.
