

Properties of Glass

- The thermal, optical, electrical and chemical properties of glass vary with its composition.
- Glass is a **good thermal conductor**.
- Glass is an electrically **insulating** material: it does not conduct electricity.
- When light falls on glass, part of the light is **reflected** at the surface, part of the light is **absorbed** in the glass, and part of the light is **transmitted**.
- If most of the light is transmitted, the glass is **transparent**. By colouring the glass or changing its composition, it is possible to transmit selectively some wavelengths of the spectrum.
- Common glass **does not transmit ultra-violet radiation** (short wavelengths): you will not get a tan behind a window! However it **does transmit infrared radiation**

Glass Structures Jan Wurm, 2007-06-22 Flat glass opens up more possibilities for the planner than virtually any other
material Because of the technological complexity of using it however no specific structural forms have been developed for
glass supporting frameworks as they have been for wood concrete and steel This book is thus the first to present a coherent
guide to the planning and design of glass supporting frameworks The focus is on the pressure resistant flat supporting
element as a basic building block for broad supporting structures The spatial and constructive forms of multifunctional self
supporting glass envelopes are vividly illustrated and systematically explained The constructions presented exhibit new
aesthetic qualities based not on the dictum of dematerialization but on the poetry of gleaming and transparent planes They

book entitled *Thin Films on Glass* is one of a series reporting on research and development activities on products and
processes conducted by the Schott Group The scientifically founded development of new products and technical processes
has traditionally been of vital importance to Schott and has always been performed on a scale determined by the prospects
for application of our special glasses Since the reconstruction of the Schott Glaswerke in Mainz the scale has increased
enormously The range of expert knowledge required could never have been supplied by Schott alone It is also a tradition in
our company to cultivate collaboration with customers universities and research institutes Publications in numerous
technical journals which since 1969 we have edited to a regular schedule as *Forschungsberichte* research reports describe
the results of these cooperations They contain up to date information on various topics for the expert but are not suited as
survey material for those whose standpoint is more remote This is the point where we would like to place our series to
stimulate the exchange of thoughts so that we can consider from different points of view the possibilities offered by those

incredibly versatile materials glass and glass ceramics We would like to share the knowledge won through our research and development at Schott in cooperation with the users of our materials with scientists and engineers interested customers and friends and with the employees of our firm *Glass in Building* Bernhard Weller,Stefan Unnewehr,Silke Tasche,Kristina Härth,2012-12-10 Glass in Building opens up a whole range of fascinating design possibilities for the planning architect Glass has long served as a translucent room closing element but its range of possible uses is actually much wider It not only offers protection against the external world for example noise or fire despite its apparent fragility it can even take on load bearing functions in supporting structures In combination with various different finishing methods materials and coatings it also satisfies exacting structural physical standards Glass in Building offers a clear compact and illustrated overview of the material appropriate use of this varied and versatile material in building construction and provides information that goes far beyond the basics on designing with glass and producing and using specialized glass products as well as on the building and planning regulations that must be taken into account when constructing with glass A selection of exemplary realized projects rounds out the theoretical section Das Bauen mit Glas eröffnet dem planenden Architekten faszinierende gestalterische Möglichkeiten Schon lange dient es als lichtdurchlässiger Raumabschluss ist aber weitaus vielfältiger einsetzbar Glas bietet nicht nur Schutz vor der Aussenwelt etwa gegen Lärm oder Feuer sondern kann trotz seiner vermeintlichen Zerbrechlichkeit sogar lastabtragende Funktionen innerhalb eines Tragwerks übernehmen In Kombination mit verschiedenen Veredelungsmethoden Materialien und Beschichtungen erfüllt es auch hohe bauphysikalische Anforderungen Detail Practice Konstruktiver Glasbau liefert einen kompakten anschaulichen Überblick über den materialgerechten Einsatz dieses facettenreichen Baustoffs in der Baukonstruktion und vermittelt weit über die Grundlagen hinausreichende Informationen zum Entwerfen mit Glas zur Herstellung und Anwendung spezieller Glasprodukte sowie zu den baurechtlichen Regelungen die im Glasbau zu berücksichtigen sind Eine Auswahl beispielhafter realisierter Projekte rundet den theoretischen Teil ab **Handbook of Package Engineering, Third Edition** Joseph F.
