Shinji Tokonami, Ikuo Kashiwakura, 2021-09-15 Ten years have passed since the nuclear accident occurred in Fukushima Japan following the Great East Japan earthquake. Thereafter, many people around the world have been concerned about the risks posed by radiation. They still believe that even a small amount of radiation exposure will affect human health. In reality, however, there are many natural radionuclides in the environment which emit a variety of types of radiation. Although it is well known that there is a positively linear relationship between acute radiation exposure and cancer risk in atomic bomb survivors, the risk of chronic radiation exposure due to natural radionuclides cannot be well explained to people who have lived in high background radiation areas for many generations. Therefore, more studies in this research field are required to obtain new scientific findings. In order to promote further scientific activities, it will be the best for us to understand the current status of this field by summarizing what we have apprehended so far. This Special Issue will highlight measurement data, methodologies, radiation biology, and risk assessment related to radiation.

Rector's Community and Public Health Nursing Mary Jo Stanley, Charlene Niemi, 2024-12-17 Combining practical insights, real world examples, and a renowned student friendly approach, *Rector's Community and Public Health Nursing: Promoting the Public's Health* 11th Edition equips tomorrow's nurses with the knowledge, skills, and perspective needed to address complex health challenges and to promote the well-being of diverse populations in an ever-changing healthcare landscape. This extensively revised edition reflects an enhanced emphasis on clinical judgment and a renewed focus on the needs of aggregate and vulnerable groups, familiarizing students with today's most prominent public health issues while empowering them to promote health, foster disease prevention, and to protect at-risk populations in any setting.
