## **Radicalisation Of Science:**

**The Radicalisation of Science** Hilary Rose, Steven Peter Russell Rose, 1976      **The Radicalisation of Science** Hilary and Steven Rose, 1976      **Love, Power, and Knowledge** Hilary Rose, 1994 Rose's passionately engaged book develops new terms for thinking about science and feminism. She locates the feminist criticism of science as integral to both the feminist movement and the radical science movement. She attends to the political economy of the production of knowledge and to what does and does not count as knowledge. How women and minorities are affected by these processes is also explored. Because biology is destiny is both an old and oppressive claim made by science, she examines at length the latest and massively resourced claimant, the Human Genome program, the so-called Holy Grail of the new industrialized genetics. Rose's commitment to feminist resistance against the science and technology of oppression leads her to explore feminist science fiction as an ally of feminist science critics with its imaginative capacity to explore different futures with different sciences and technologies.

**Science Studies during the Cold War and Beyond** Elena Aronova, Simone Turchetti, 2016-09-24 This book examines the ways in which studies of science intertwined with Cold War politics in both familiar and less familiar battlefields of the Cold War. Taken together, the essays highlight two primary roles for science studies as a new field of expertise institutionalized during the Cold War in different political regimes. Firstly, science studies played a political role in cultural Cold War in sustaining as well as destabilizing political ideologies in different political and national contexts. Secondly, it was an instrument of science policies in the early Cold War; the studies of science were promoted as the underpinning for the national policies framed with regard to both global geopolitics and local national priorities. As this book demonstrates, however, the wider we cast our net extending our histories beyond the more researched developments in the Anglophone West, the more complex and ambivalent both the science studies and the Cold War become outside these more familiar spaces. The national stories collected in this book may appear incommensurable with what we know as science studies today, but these stories present a vantage point from which to pluralize some of the visions that were constitutive to the construction of Cold War as a juxtaposition of the liberal democracies in the West and the communist East.

**Radicalisation** James R. Lewis, Akil N. Awan, 2024-01-01 Radicalization has become an important part of the twenty-first century security and political landscape. It is a seemingly ubiquitous term employed by academics, policymakers, civil society actors, practitioners, and media alike in ever-expanding ways describing everything from changing domestic social movements to the growth of international terrorism. This volume provides a comprehensive treatment of radicalization, the processes during which individuals or groups adopt increasingly extreme political, social, or religious beliefs, positions, or aspirations, particularly in cases associated with the use of violence. Adopting a multifaceted and comparative approach, the contributors interrogate this phenomenon from wide-ranging social, ideological, religious, and historical angles. The first part of the book explores how academia has engaged with the concept of radicalization, including the ontological and epistemological

concerns of Critical Terrorism Studies theoretical models for understanding radicalization and approaches to radicalization through the various lenses of identity gender youth and media The second part explores manifestations of radicalization through a range of diverse case studies including the Falun Gong movement Aum Shinrikyo Far Right trans nationalism white nationalist lone wolves and the Great Replacement thesis ISIS and Western jihadists deradicalization programs hero myths the Extreme Right in Eastern Europe and the dark side of globalization **Science in Society** Matthew

David, 2017-03-16 Science Technoscience has moved to centre stage in debates over change power and justice in twenty first century societies This text provides a general framework for understanding combining and applying the rich range of approaches that exist within sociology about science in particular the role and limitations of science in generating knowledge and the relationship between scientific knowledge and social progress Drawing on case studies from the past up until today s new genetics this is a clear even handed and comprehensive introduction to the field Science and the politics of openness

Originally published in 1986 This work remains of compelling interest to those concerned with the natural sciences and their social problems It puts forward original and unorthodox ideas about the philosophy of and sociology of science starting from the conviction that modern societies face deep problems arising from unresolved dilemmas about the meaning content and technical applications of the theories of nature they employ The book draws on insights developed within a variety of traditions to explore these problems especially the work of Edmund Husserl and modern critical theory Radicalisation Gilbert McLaughlin, 2023-12-13 Radicalisation is a conceptual investigation within Western liberal democratic societies that follows an analytical framework linking expertise theory to discourse analysis of publications from the academic governmental and non governmental spheres as well as a dozen interviews with experts in the field The reader will come to understand the socio political configurations that led to the emergence of radicalisation as an object of study The book also identifies the historical tensions regarding models definitions and operationalisation of the concept of radicalisation in social sciences research Finally a new model explaining how the term radicalisation became the central conceptual framework of a

new field of expertise will be proposed The book is situated within the fields of security studies crime prevention and sociology of expertise The book is innovative in its distinct focus on the term radicalisation and the expertise thereof With its diachronic and synthetical approach the book also serves as an entry point for all researchers and practitioners seeking an introduction to the subject of radicalisation and violent extremism The book addresses the debates among academics public experts and policymakers into the origin dissemination and maintenance of the field of expertise Thus the aim is not so much to uncover the true meaning of the term as to understand how it has been socially constructed this book will be of great interest to students and scholars of criminology security studies and sociology **The Return of Nature** John Bellamy

Foster,2020-06-16 Winner 2020 Isaac and Tamara Deutscher Memorial Prize A fascinating reinterpretation of the radical and socialist origins of ecology Twenty years ago John Bellamy Foster s Marx s Ecology Materialism and Nature introduced a new understanding of Karl Marx s revolutionary ecological materialism More than simply a study of Marx it commenced an intellectual and social history encompassing thinkers from Epicurus to Darwin who developed materialist and ecological ideas Now with The Return of Nature Socialism and Ecology Foster continues this narrative In so doing he uncovers a long history of the efforts to unite questions of social justice and environmental sustainability and helps us comprehend and counter today s unprecedented planetary emergencies The Return of Nature begins with the deaths of Darwin 1882 and Marx 1883 and moves on until the rise of the ecological age in the 1960s and 1970s Foster explores how socialist analysts and materialist scientists of various stamps first in Britain then the United States from William Morris and Frederick Engels to Joseph Needham Rachel Carson and Stephen J Gould sought to develop a dialectical naturalism rooted in a critique of capitalism In the process he delivers a far reaching and fascinating reinterpretation of the radical and socialist origins of ecology Ultimately what this book asks for is nothing short of revolution a long ecological revolution aimed at making peace with the planet while meeting collective human needs Alternative Ways of Life in Contemporary Europe Andrzej Siciński,Monica Wemegah,1983 references throughout part of the Goals processes and indicators of development project
