A Dictionary of Geography, Second Edition F. J. Monkhouse, 2008 The geographer seeks to describe the diverse features of the earth's surface to explain if possible how these features have come to be what they are and to discuss how they influence the distribution of man with his diverse activities Geography therefore stands transitionally yet centrally between the natural sciences the social studies and the humanities While in its concept and content it is an integrated whole of necessity it impinges on the associated disciplines and inevitably makes use of a wide range of kindred terminology In compiling the 3 400 entries for this dictionary the main criterion for inclusion has been usage Geographical textbooks and periodicals have been systematically combed and where a term has been used in a specific geographical context or in a specialist sense which differs from general practice or popular usage it has been included Foreign words are listed where they have been accepted into English geographical literature especially where no satisfactory translation exists Cross references are freely given printed in small capitals where it is necessary to assist the user in tracing cognate and supplementary entries or where the meaning of the word thus shown is essential to the understanding of the entry The emphasis throughout is on specific factual information conveniently accessible on a strict alphabetical basis rather than a bare definition Statistical material and formulae are appended where it would seem helpful in the form of tables under the relevant entries Since this dictionary is neither a gazetteer nor a compendium of current affairs lists of countries and capitals regional names and international groupings are not included since these can be found conveniently elsewhere The five hundred and seventy two additional entries to this dictionary together with a few minor modifications to the existing material are the result of extensive correspondence and discussion since the appearance of the first edition This edition originally published in 1970 has continuing relevance as a resource for professionals F J Monkhouse was formerly chair of geography at the University of Southampton Throughout his career he
