Radiofrequency Catheter Ablation Of Cardiac Arrhythmias Basic Concepts And Clinical Applications:

Catheter Ablation of Cardiac Arrhythmias David J. Wilber, Douglas L. Packer, William G. Stevenson, 2011-09-22

Radiofrequency Catheter Ablation of Cardiac Arrhythmias has been so extensively updated for its third edition that the book now features a new title *Catheter Ablation of Cardiac Arrhythmias Basic Concepts and Clinical Applications*. The editors bring you 21 polished chapters each updating the fundamentals and progressing to advanced concepts providing state of the art knowledge with highly relevant material for experienced electrophysiologists as well as fellows in training. This streamlined new edition features two new editors both widely published and leaders in the field of catheter ablation. 21 instead of 39 chapters achieved by focusing on primary topics of broad interest and assimilating information from a wide range of sources. Fewer authors chosen for their recognized contributions to the topics under discussion providing a more integrated and coherent approach. Anatomic insights from leading pathologist Siew Yen Ho integrated with new information from imaging technologies. Each chapter dealing with ablation of a specific arrhythmia features the author's personal approach to ablation of the arrhythmia including practical how to tips and a review of potential pitfalls. Alternate approaches and variations are succinctly summarized. Original figures and drawings illustrate specific approaches to improve the usability of the book.

Progress in Catheter Ablation Liong Bing Liem, Eugene Downar, 2013-11-11 Catheter ablation is widely accepted as an effective and safe form of therapy for cardiac arrhythmia In many instances this curative procedure is considered as the first line of therapy if not the ultimate treatment of choice With the use of radiofrequency RF modality which has revolutionized the technology from a barotraumatic potentially injurious procedure using high voltage direct current DC shock to a safe and relatively painless one catheter ablation procedure now carries a very low risk and is extremely effective for certain types of arrhythmia Its efficacy rate in curing supraventricular tachycardia involving an accessory pathway or dual atrioventricular nodal pathways has been near perfect and its application for certain types of atrial and ventricular arrhythmia have also been very satisfactory However conventional RF ablation has several well known limitations most notably is its ability to only produce relatively small point lesions rendering it effective only for an arrhythmia with a small and or a superficial target It was soon recognized that the technology would not likely to have significant utility in arrhythmia with a more widespread target such as atrial fibrillation or those which involve scarred and deep myocardial tissue such as ventricular tachycardia Indeed the application of

conventional RF technology in these complex but common arrhythmia has yielded unsatisfactory results Noninvasive Physiological Measurement James C.
