Radiology Today 4 Friedrich H. W. Heuck, Martin W. Donner, 2012-12-06 The biennial symposium Radiology

Today continues its original mission to bring together European and American radiologists to discuss advances in the field. This volume presents material by well known experts in cardiovascular and skeletal radiology. Its aim is to provide an overview of each major topic, trends in clinical development and current interests in research. The future holds much promise for cardiovascular and skeletal radiology primarily because of new techniques and procedures but also because of the development of imaginative approaches to clinical problems. Ideas are born on both sides of the Atlantic and we believe that it is important to ensure a rapid exchange of new information and to determine how it fits into today's medical care, keeping in mind the quality of patients' care, their safety and comfort as well as cost. The traditional role of radiologists as consultants has increased greatly over time with new responsibilities being continuously added. We radiologists are challenged to determine the diagnostic pathway appropriate to each patient. To arrive at the diagnosis quickly, safely and at the lowest possible cost is as important as our participation in determining the patient's management. Some therapeutic procedures are even carried out by diagnostic radiologists themselves employing ultrasound, computed tomography or fluoroscopy and intracavitary catheters. Abscesses can be drained and blood vessels dilated or blocked. In diagnosis and therapy, events are moving quickly and advances are made at a rapid pace.

Pediatric Urogenital Radiology Michael Riccabona, 2018-07-12

This third edition of *Pediatric Urogenital Radiology* has been thoroughly updated to take account of the recent advances in the imaging and treatment of pediatric nephro-urologic disorders that have been achieved over the past years. A number of new chapters have been included on topics such as the role of ultrasound and MRI for urogenital imaging in the fetus and the use of contrast media in childhood. Other chapters have been extensively revised or rewritten while information that continues to be pertinent has been retained. The book describes in detail all aspects of pediatric urogenital radiology. It is written primarily from the point of view of the radiologist but also includes essential clinical information from and for the pediatrician, pediatric surgeon and urologist. It is specifically designed to aid the clinician in making decisions on imaging management and to help the radiologist to understand the clinical background and needs. The newest techniques and the changing relevance of imaging and interventional procedures are described and the diverse problems associated with the changing anatomy, physiology and pathophysiology from the newborn period to adulthood are explained. The whole spectrum of imaging features of agenesis, anomalies and malformations, dysplasia, parenchymal and cystic diseases, urolithiasis, neoplastic diseases, renal vascular hypertension, renal failure, renal transplantation, pre and postoperative imaging and genitourinary trauma is covered. Individual chapters are devoted to vesicoureteric reflux, urinary tract infection, congenital urinary tract dilatation, upper urinary tract dilatation, voiding dysfunction and neurogenic bladder. A chapter on the clinical management of common nephro-urologic disorders explains how imaging is embedded in the whole process of clinical management. Short conclusions are included at the end of chapters and sections to highlight the key information.
