In the history of mathematics, the algebraic theory of semi-groups is a relative new-comer, with the theory proper developing only **in the second half of the twentieth century.**

Historically, it can be viewed as an algebraic apstraction of the properties of the composition of transformations on a set.

Semigroup and Factorization Methods in Transport Theory Cornelis Victor Maria Mee,1981 Modern Mathematical Methods in Transport Theory Greenberg,Polewczak,2013-11-22 The Eleventh International Transport Theory Conference and Symposium in honor of the sixty fifth birthday of Kenneth Case and the sixtieth birthday of Paul Zweifel was held in Blacksburg Virginia during May 22 26 1989 on the campus of Virginia Polytechnic Institute and State University Virginia Tech This volume consists of a selection of the invited papers delivered at the Conference and represents a cross section of the research currently being carried out in the field of transport theory The volume is divided into two sections The Symposium lectures are intended each to summarize an important aspect of transport theory as well as to present timely new results of the author s research interest The Conference lectures are contributions of each author on his current research As has been the custom in this series of conferences each lecturer was invited to participate by the organizing committee of the Conference W Greenberg Virginia Tech chairman V Boffi Universita di Firenze N Corngold California Institute of Technology B Ganapol University of Arizona N McCormick University of Washington P Nelson Texas Tech G Pomraning University of California Los Angeles The Eleventh International Transport Theory Conference was funded by generous con tributions from Science Applications International Corporation R Beyster president and from Virginia Polytechnic Institute and State University Conference participants and we believe researchers in this and related areas are indebted to these organizations We would like to thank Lamberto Rondoni in the graduate program at Virginia Tech for proofreading manuscripts of all the Italian contributors **Classes of Linear Operators Vol. I** Israel Gohberg,Seymor Goldberg,Marinus Kaashoek,2013-03-09 After the book Basic Operator Theory by Gohberg Goldberg was pub lished we that is the present authors intended to continue with another book which would show the readers the large variety of classes of operators and the important role they play in applications The book was planned to be of modest size but due to the profusion of results in this area of analysis the number of topics grew larger than ex pected Consequently we decided to divide the material into two volumes the first volume being presented now During the past years courses and seminars were given at our respective in stitutions based on parts of the texts These were well received by the audience and enabled us to make appropriate choices for the topics and presentation for the two vol umes We would like to thank G J Groenewald A B Kuijper and A C M Ran of the Vrije Universiteit at Amsterdam who provided us with lists of remarks and corrections We are now aware that the Basic Operator Theory book should be revised so that it may suitably fit in with our present volumes This revision is planned to be the last step of an induction and not the first **Exponentially Dichotomous Operators and Applications** Cornelis V. M. van der Mee,2008-09-27 In this monograph the natural evolution operators of autonomous first order differential equations with exponential dichotomy on an arbitrary Banach space are studied in detail Characterizations of these so called exponentially dichotomous operators in terms of their resolvents and additive and multiplicative perturbation results are given This is the

first book at graduate level on autonomous first order differential equations with exponential dichotomy in a Banach space

Scientific and Technical Aerospace Reports ,1983 *Classes of Linear Operators* Israel Gohberg,Seymour Goldberg,Marius A. Kaashoek,2013-03-09 These two volumes constitute texts for graduate courses in linear operator theory The reader is assumed to have a knowledge of both complex analysis and the first elements of operator theory The texts are intended to concisely present a variety of classes of linear operators each with its own character theory techniques and tools For each of the classes various differential and integral operators motivate or illustrate the main results Although each class is treated seperately and the first impression may be that of many different theories interconnections appear frequently and unexpectedly The result is a beautiful unified and powerful theory The classes we have chosen are representatives of the principal important classes of operators and we believe that these illustrate the richness of operator theory both in its theoretical developments and in its applicants Because we wanted the books to be of reasonable size we were selective in the classes we chose and restricted our attention to the main features of the corresponding theories However these theories have been updated and enhanced by new developments many of which appear here for the first time in an operator theory text In the selection of the material the taste and interest of the authors played an important role *Operators and Function Theory* S.C. Power,2012-12-06 In the modern study of Hilbert space operators there has been an increasingly subtle involvement with analytic function theory This is evident in the analysis of subnormal operators Toeplitz operators and Hankel operators for example On the other hand the operator theoretic viewpoint of interpolation by analytic functions is a powerful one There has been significant activity in recent years within these enriching interactions and the time seemed right for an overview ot the main lines of development The Advanced Study Institute Operators and Function Theory in Lancaster 1984 was devoted to this and this book contains ex panded versions and one contraction of the main lecture prog ramme These varied articles by prominent researchers include for example a survey of recent results on subnormal operators recent work of Soviet mathematicians on Hankel and Toeplitz operators expositions of the decomposition theory and inter polation theory for Bergman Besov and Bloch spaces with applic ations for special operators the Krein space approach to inter polation problems and much more It is hoped that these proceedings will bring all this lively mathematics to a wider audience Sincere thanks are due to the Scientific Committee of the North Atlantic Treaty Organisation for the generous support that made the institute possible and to the London Mathematical Society and the British Council for important additional support Warm thanks also go to Barry Johnson and the L M S for early guidance and to my colleague Graham Jameson for much organisational support *Spectral Theory in Inner Product Spaces and Applications* Jussi Behrndt,Karl-Heinz Förster,Heinz Langer,Carsten Trunk,2009-01-21 Contains a collection of research papers originating from the 6th Workshop on Operator Theory in Krein Spaces and Operator Polynomials which was held at the TU Berlin Germany December 14 to 17 This work discusses topics such as linear relations singular perturbations de Branges spaces
