**development** Etienne De Villers-Sidani, Virginia Penhune, 2014-11-21 The impact of training or experience is not the same at all points in development Children who receive music lessons or learn a second language before age 7-8 are more proficient as adults Early exposure to drugs or trauma makes people more likely to become addicted or depressed later in life Rat pups exposed to specific frequencies from 9-13 days post partum show expanded cortical representations of these frequencies Young birds must hear and copy their native song within 1-2 months of birth or they may never learn it at all These are examples of sensitive periods developmental windows where maturation and specific experience interact to produce differential long term effects on the brain and behavior While still controversial evidence for the existence of sensitive periods has grown as has our understanding of the underlying mechanisms of brain plasticity Behavioral evidence from studies of language psychopathology or vision in humans has been complemented by evidence elucidating molecular gene and hormonal mechanisms in animals It has been proposed that sensitive periods can be both opened and closed by specific experience and that there are multiple overlapping sensitive periods that occur throughout development as functions come on line It is also likely that experience dependent behavioral or brain plasticity accrued during one sensitive period can serve as a scaffold on which later experience and plasticity can build Based on current knowledge there are a number of broad questions and challenges to be addressed in this domain these include generating new information about the neurobiological mediators of structural and functional changes proposing models of brain development that will better predict when sensitive

periods should occur and what functions are implicated investigation of the interaction between experience during a sensitive period and pre existing individual differences and the relationship between experience during a sensitive period and on going experience The goal of this Research Topic is to bring together scientists in different fields whose work addresses these issues including animal and human developmental neuroscience language and cognitive development education developmental psychopathology and sensory neuroscience

*Attachment Theory Applied* Mario Mikulincer, Phillip R. Shaver, 2023-06-20 In this compelling book prominent investigators Mario Mikulincer and Phillip R Shaver review the state of the science of attachment based interventions in psychotherapy and beyond They critically evaluate a range of programs that aim to strengthen parent child couple and therapist client relationships The theoretical and empirical underpinnings of each intervention are examined as are specific techniques used to enhance felt security and foster personal growth The book also looks at evidence based interventions outside the mental health domain including programs that target teacher student relationships and academic performance Looking to the future the authors discuss emerging applications of attachment theory in medicine and health care management and organizational behavior and group and intergroup processes See also the related work from Mikulincer and Shaver *Attachment Theory Expanded Security Dynamics in Individuals Dyads Groups and Societies*
