Sensory Nerves And Neuropeptides In Gastroenterology:

Sensory Nerves and Neuropeptides in Gastroenterology Marcello Costa, Calgero Surrenti, Sergio Gorini, Carlo Alberto Maggi, Alberto Meli, 2013-11-21 In the past 15 years much evidence has accumulated which indicates the paramount importance of sensory nerves in regulating functions of the gastrointestinal tract. In parallel, the attention of researchers in this field has been increasingly attracted to the role played by neuropeptides in the normal and diseased gut. Basic research on the peculiar properties of capsaicin, the pungent ingredient from plants of the genus *Capsicum*, has allowed the gap between these two areas of research to be bridged. Since then, the study of gut afferents and neuropeptides has become more and more interconnected and recognized as a major avenue to understanding the pathophysiology of various human diseases. It is widely recognized that a certain subset of primary afferents synthesize, store, and release neuropeptides such as tachykinins and calcitonin gene-related peptide from their central and peripheral endings, the latter being widely distributed in the alimentary canal and related organs, liver, pancreas. The First International Meeting on Sensory Nerves and Neuropeptides in Gastroenterology, held in Florence from December 4-5, 1989, sponsored and organized by Fondazione Internazionale Menarini, aimed to focus the current status of research in this field. The contributions presented at the meeting and in this book delineate a suggestive scenario in which sensory nerves of the gut and the multiple messages they carry through the release of neuropeptides are to be considered as a major target for the development of new drugs potentially useful in a number of diseases of the gastrointestinal tract.

Neuropeptide Function in the Gastrointestinal Tract Edwin E. Daniel, 2019-08-15
First published in 1991. This book assimilates and evaluates the rapidly accumulating information regarding neuropeptides in the gut: their chemistry, genetic control, processing in enteric nerves, the projections of their nerves, their actions at the tissue, cell, and molecular levels, and their roles in controlling gut motility in health and disease. *Neuropeptide Function in the Gastrointestinal Tract* is directed to scientists in all disciplines who work with neuropeptides as well as physiologists interested in the neural and smooth muscle actions of neuropeptides.

Physiology of the Gastrointestinal Tract, Two Volume Set Hamid M. Said, 2012-07-04

FROM THE PREFACE The original purpose of the First Edition of Physiology of the Gastrointestinal Tract to collect in one set of volumes the most current and comprehensive knowledge in our field was also the driving force for the Fourth Edition The explosion of information at the cellular level made possible in part by the continued emergence of powerful molecular and cellular techniques has resulted in a greater degree of revision than that of any other edition The first section now titled Basic Cell Physiology and Growth of the GI Tract contains numerous new chapters on topics such as transcriptional regulation signaling networks in development apoptosis and mechanisms in malignancies Most of the chapters in this section were edited by Juanita L Merchant Section II has been renamed Neural Gastroenterology and Motility and has been expanded from seven chapters with rather classic titles to more than twenty chapters encompassing not only the movement of the various parts of the digestive tract but also cell physiology neural regulation stress and the regulation of food intake Almost all of the chapters were recruited and edited by Jackie D Wood The third section is entirely new and contains chapters on Immunology and Inflammation which were edited by Kim E Barrett The fourth section on the Physiology of Secretion consists of chapters with familiar titles but with completely updated information to reflect the advances in our understanding of the cellular processes involved in secretion The last section on Digestion and Absorption contains new chapters on the intestinal barrier protein sorting and ion channels along with those focusing on the uptake of specific nutrients These chapters were recruited and edited by Hamid M Said and Fayez K Ghishan Collected in one set the most current and comprehensive coverage of gastrointestinal physiology Information presented in a style that is both readable and understandable Valuable to the specialized researcher the clinical gastroenterologist the teacher and the student Features an entirely new section on Immunology and Inflammation Each section edited by the preeminent scientist in the field

Gastrointestinal Mucosal Repair and Experimental Therapeutics C. -H. Cho,J. -Y. Wang,2002-05-07 Over the last decade considerable progress has been made in understanding cellular and molecular mechanisms involved in gastrointestinal mucosal injury and repair These findings provide the basis to identify the etiology and pathogenesis of various gut mucosal injury related diseases and to develop new therapeutic approaches The publication at hand is divided into three sections Epithelial restitution mucosal repair and ulcer healing and experimental therapeutics The first part highlights the early rapid mucosal restitution focussing on the roles of extracellular matrix cytoskeleton cytokines Ca² signaling polyamines and the protein kinase C DAG pathways The next section deals with aspects of chronic mucosal healing concentrating on the roles of primary response gene expression angiogenesis and angiogenic growth factors platelets and the mechanisms of cell renewal

after injury in special circumstances The last part explores new therapeutic approaches stressing potential clinical applications of nitric oxide releasing agents polysaccharides nitric oxide synthase modulators growth factors prostaglandins and cyclooxygenase inhibitors Covering the current state of the art findings relevant to gut mucosal injury and repair as well as providing the underlying conceptual basis and knowledge regarding experimental therapeutics for gastrointestinal mucosal injury related diseases this publication will be a timely guide for investigators working in the field

Regulatory Mechanisms in Gastrointestinal Function (1995) Timothy S. Gagginella, 2017-11-22 Regulatory Mechanisms in Gastrointestinal Function includes a collection of contemporary topics in gastrointestinal research The control of gastroduodenal electrolyte transport and the influence of drugs on bicarbonate secretion are reviewed in detail The importance of the interactions between calcium and cyclic AMP in intestinal secretion is emphasized in a comprehensive chapter that systematically addresses each link in the mechanisms that regulate chloride secretion Other important topics included in the book are neural reflex modulation of intestinal epithelial transport the influence of the microcirculation on intestinal secretion and nitric oxide as a mediator of physiologic and pathophysiologic secretion The expertise of the authors has resulted in a breadth of important contemporary topics covered in depth

Innervation of the Gut Yvette Tache, David L. Wingate, Thomas F. Burks, 1993-12-02 Innervation of the Gut provides a stimulating discussion of gut innervations based on exciting developments generated by advanced neuroanatomical and electrophysiological approaches All components of the nervous system are covered including central spinal autonomic and enteric systems This information is relative to secretory motor and immune regulatory functions of the gut as well as visceral sensation Brain transmitters involved in mediating stress induced alterations of gastrointestinal motor function and the central regulation of vagal outflow to the gut are discussed in detail The book will stimulate basic scientists and gastroenterologists to expand research efforts that may enable them to unravel the mechanisms of brain gut interactions under physiological and pathological conditions Students psychologists and psychiatrists will find Innervation of the Gut an essential reference for their studies

Innervation of the Gastrointestinal Tract Simon Brookes, Marcello Costa, 2002-06-27 The long tube that makes up the gastrointestinal tract is composed of a variety of tissue types and is the largest internal organ of the body Its main function is to digest food and absorb the released nutrients Furthermore it is subdivided into functionally distinct regions that each mediate one of a variety of actions upon the food consumed

Gastrointestinal Regulatory Peptides David R. Brown, 2012-12-06 Since the discovery of the pancreatic secretagogue secretin by W M BAYLISS and E H STARLING at the inception of the twentieth century intense interest has focused on numerous continually expanding classes of small peptides which appear to serve as regulatory molecules in the gastrointestinal tract brain and other organ systems Initially many of these substances were like secretin discovered in functional assays as factors or activities extractable in minute quantities from tissues or tissue fluids By the middle of the century advances in biochemical and immunological methods for the purification characterization and quantification of biologically active peptides in organ systems tissues and body fluids provided further impetus to this field It was readily appreciated that small biologically active peptides were particularly abundant in the digestive tract Many peptides such as vasoactive intestinal peptide gastrin and more recently peptide YY and galanin were in fact originally discovered in and

isolated from gut tissue Moreover these peptides were found to have profound actions on the gastroenteropancreatic system in vivo and in vitro During the past 2 decades information on regulatory peptides has burgeoned as a result of technological refinements in the synthesis of peptides improved methods for detecting and visualizing peptides and their precursors in cells and tissues from a variety of species advances in the functional assessment of peptide activity and the application of molecular biological techniques to the characterization of peptide gene structure and expression
