

The 8 Sensory Systems

Auditory

What you hear, space-time relationships, influences regulation, spatial awareness, muscle tone and balance

Visual (sight)

What you can see, visual cortex at back of skull; connected to vestibular and proprioceptive systems

Olfactory (smell)

What you can smell, olfactory bulb directly connected to the limbic system

Gustatory (taste)

Taste and motor processes for eating, breathing etc.
Sensations: chewy, crunchy, salty, sour, sweet, spicy, hot and cold

Tactile (touch)

Touch receptors send feedback about pain, vibration and temperature, deep pressure and light touch have different receptors

Vestibular

Any time you move you are getting vestibular input, the vestibular system in the inner ear detects gravity, motion, movement and space-time relationship, important for balance.

Proprioception

Sense of your body in space, body boundaries and what is self; works with vestibular and tactile to create a foundation for efficient movement, body map and orientation

Interoception

An awareness of your internal states (hunger, thirst, emotion, temperature etc.) and systems (heart, kidneys, bladder, skin, hormones, lungs, stomach, intestines)

Sensory Processes:

Sensory Processes Lawrence Marks, 2014-07-23 *Sensory Processes* The New Psychophysics describes summarizes and theorizes on the application of psychophysics to the study of sensory processes This book deals with significant issues in sensory psychology which is mainly by treating sensory dimensions and attributes as measurable quantities Organized into seven chapters this book starts with an overview of the fundamental methods for evaluating the magnitudes of sensation with emphasis direct scaling methods This text then explains the advantages of direct scaling procedures in providing psychophysical and sensory physical information Other chapters consider the parameters of temporal and spatial distribution of the stimulus This book discusses as well the other significant variables that determine sensitivity particularly compositional variables that refer to wavelength and frequency of light and sound The final chapter deals with several persistent issues and unresolved questions in the realm of sensory scaling Sensory psychologists sensory scientists researchers and graduate students will find this book useful

The Handbook of Multisensory Processes Gemma Calvert, Charles Spence, Barry E. Stein, 2004 Research is suggesting that rather than our senses being independent perception is fundamentally a multisensory experience This handbook reviews the evidence and explores the theory of broad underlying principles that govern sensory interactions regardless of the specific senses involved *Sensory Processing, Perception, and Behavior* Robert Burr Livingston, 1978

Sensory Processing in Aquatic Environments Shaun P. Collin, N. Justin Marshall, 2008-04-08 Research on sensory processing or the way animals see hear smell taste feel and electrically and magnetically sense their environment has advanced a great deal over the last fifteen years This book discusses the most important themes that have emerged from recent research and provides a summary of likely future directions The book starts with two sections on the detection of sensory signals over long and short ranges by aquatic animals covering the topics of navigation communication and finding food and other localized sources The next section the co evolution of signal and sense deals with how animals decide whether the source is prey predator or mate by utilizing receptors that have evolved to take full advantage of the acoustical properties of the signal Organisms living in the deep sea environment have also received a lot of recent attention so the next section deals with visual adaptations to limited light environments where sunlight is replaced by bioluminescence and the visual system has undergone changes to optimize light capture and sensitivity The last section on central co ordination of sensory systems covers how signals are processed and filtered for use by the animal This book will be essential reading for all researchers and graduate students interested in sensory systems

Meaningful Participation and Sensory Processing Antoine Bailliard, Batya Engel-Yeger, Winnie Dunn, Catana Brown, 2022-11-15

Sensory Processes David R Soderquist, 2002-01-11 There is no comparable text for a course in perception that emphasizes the neural basis of perception rather than simply perceptual phenomena and psychophysics It is strong in the clarity with which some difficult concepts are explained The author does not restrict himself to a physics and engineering approach but rather gives the reader a mental image of what is happening biologically Inclusion of disorders is

another big advantage The quality of writing is excellent The level is appropriate for upper level undergraduates RICKYE HEFFNER University of Toledo I think the book s primary strengths are its attention to detail and willingness to tackle difficult topics and offer very good explanations and analogies STEVEN HAASE University of Wisconsin at Madison I m very sympathetic to the goal of this book in taking an enhanced multidisciplinary approach to the area of Sensation Perception with particular emphasis on the neuroscience background Also commendable is the detailed treatment of sense modalities other than vision and audition MICHAEL SLOANE University of Alabama at Birmingham I like the general tone of the book The overall approach and the metaphors are quite nice BRUCE HALPERN Cornell University This core text emphasizes the underlying neural structures and functions of sensory systems pain olfaction gustation audition vision etc and presents this complex material at a level comprehensible to undergraduates as well as beginning graduate students The text begins with a review of the central nervous system and its sensory components and includes discussions of methodological techniques and procedures used to study sensory processes The Neural Bases of Multisensory Processes Micah M. Murray, Mark T. Wallace, 2011-08-25 It has become accepted in the neuroscience community that perception and performance are quintessentially multisensory by nature Using the full palette of modern brain imaging and neuroscience methods The Neural Bases of Multisensory Processes details current understanding in the neural bases for these phenomena as studied across species stages *The Intersection of Cognitive, Motor, and Sensory Processing in Aging: Links to Functional Outcomes* Jeannette R.
