National Transportation Safety Board, **Oral Cancer Metastasis** Jeffrey Myers,2009-11-11 Squamous cell carcinoma of the oral cavity SCCOC is one of the most prevalent tumors of the head and neck region Despite improvements in treatment the survival of patients with SCCOC has not significantly improved over the past several decades Most frequently treatment failure takes the form of local and regional recurrences but as disease control in these areas improves SCCOC treatment

failures more commonly occur as distant metastasis The presence of cervical lymph node metastasis is the most reliable adverse prognostic factor in patients with SCCOC and extracapsular spread ECS of cervical lymph nodes metastasis is a particularly reliable predictor of regional and distant recurrence and death from disease Decisions regarding elective and therapeutic management of cervical lymph node metastases are made mainly on clinical grounds as we cannot always predict cervical lymph node metastasis from the size and extent of invasion of the primary tumors Therefore the treatment of the neck disease in the management of SCCOC remains controversial The promise of using biomarker based treatment decisions has yet to be fully realized due to our poor understanding of the mechanisms of regional and distant metastases of SCCOC We will summarize the current status of investigations into SCCOC metastases and potential of these studies to impact basic research investigators and clinicians confronting SCCOC in the future **Advances in Surgery 2020** John L.

Oncoplastic Breast Surgery Florian Fitzal, Peter Schrenk, 2010-05-06 The initial idea to write a book on oncoplastic techniques was raised through a meeting on breast cancer treatment in Saalfelden A tria two years ago Contrary to the rather minor role breast surgery is conceded today compared to other treatment modalities the surgeons role on the further outcome of the disease is crucial and never compensated by radiation or adjuvant therapy Whereas surgery a decade ago was merely excision of the cancer and closure of the wound leaving behind a mutilated breast in many women the advent of oncoplastic surgery completely changed the modern surgical approach to breast cancer The concept of oncoplastic breast surgery combines oncologic mor resection either breast conservation or mastectomy with tditional or less traditional plastic surgical techniques The primary goal is to achieve an optimal cosmetic result with long time local tumor control Some non randomized studies available in patients following breast conservation oncoplastic surgery showed tumor resection to be associated with wider free margins less patients needing re operation surgery for involved or close margins a widening of the indications for breast conser tion surgery a low complication rate and at least an equal local recurrence rate There is no doubt that oncoplastic breast surgery experienced a r id rise with more patients demanding this kind of surgery However a profound knowledge of the different oncoplastic techniques is sential for the outcome
