Benedetti-Pichler, 2012-12-06 This book has been written for the practicing chemist whose occasional task may be qualitative analysis. It deals with the investigation of things as they are without any limitations to the scope. It emphasizes the identification of materials inorganic, organic, organized, biological, common, rare, described or not described in the accessible literature as they actually occur in nature and industry or are met in the investigation of mishaps and crime. The description of techniques macro to submicro and the practice exercises have been included since the teaching of these arts is rarely a part of academic curricula and it happens with increasing frequency that chemists have to acquire them on the job. In the systematic procedure given emphasis is placed upon the investigation of minute specimens and upon acute reasoning that continuously weighs all accumulating evidence. The work begins with the consideration of the history of the material under investigation. Especially when specks of all organic substance shall be identified it should be realized that the discovery of the source and consequently of the possibilities involved may be the most valuable clue to an efficient solution of the problem.
