Rafalow,2020-08-12 In the digital age schools are a central part of a nationwide effort to make access to technology more equitable so that all young people regardless of identity or background have the opportunity to engage with the technologies that are essential to modern life Most students however come to school with digital knowledge they ve already acquired from the range of activities they participate in with peers online Yet teachers as Matthew H Rafalow reveals in *Digital Divisions* interpret these technological skills very differently based on the race and class of their student body While teachers praise affluent White students for being innovative when they bring preexisting

and sometimes disruptive tech skills into their classrooms less affluent students of color do not receive such recognition for the same behavior Digital skills exhibited by middle class Asian American students render them hackers while the creative digital skills of working class Latinx students are either ignored or earn them labels troublemakers Rafalow finds in his study of three California middle schools that students of all backgrounds use digital technology with sophistication and creativity but only the teachers in the school serving predominantly White affluent students help translate the digital skills students develop through their digital play into educational capital Digital Divisions provides an in depth look at how teachers operate as gatekeepers for students potential reacting differently according to the race and class of their student body As a result Rafalow shows us that the digital divide is much more than a matter of access it s about how schools perceive the value of digital technology and then use them day to day **Parenting without the Power Struggles** Foster Cline,Jim
