Systems Science and Cybernetics - Volume I Francisco Parra-Luna, 2009-10-30

The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge

through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatorial problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence

The Shape of Social Inequality David Bills, 2005-08-24 This volume brings together former students colleagues and others influenced by the sociological scholarship of Archibald O. Haller to celebrate Haller's many contributions to theory and research on social stratification and mobility All of the chapters respond to Haller's programmatic agenda for stratification research A full program aimed at understanding stratification requires first that we know what stratification structures consist of and how they may vary second that we identify the individual and collective consequences of the different states and rates of change of such structures and third seeing that some degree of stratification seems to be present everywhere that we identify the factors that make stratification structures change The contributors to this Festschrift address such topics as the changing nature of stratification regimes the enduring significance of class analysis the stratifying dimensions of race ethnicity and gender and the interplay between educational systems and labor market outcomes Many of the chapters adopt an explicitly cross societal comparative perspective on processes and consequences of social stratification The volume offers both conceptually and empirically important new analyses of the shape of social stratification

H. Feinstein, Josef Pajestka, 1980-11-27 **The Making and Breaking of Minds: How social interactions shape the human mind** Isabella Sarto-Jackson, 2022-04-05 The human brain has a truly remarkable capacity It reorganizes itself flexibly adjusting to fluctuating environmental conditions a process called neuroplasticity Neuroplasticity provides the basis for wide ranging learning and memory processes that are particularly profuse during childhood and adolescence At the same time the exceptional malleability of the developing brain leaves it highly vulnerable to negative impact from the surroundings Abusive or neglecting social environments as well as socioeconomic deprivation and poverty cause toxic stress and complex traumas that can severely compromise cognitive development emotional processing self perception and executive brain functions The neurophysiological changes entailed impair emotional regulation lead to heightened anxiety and afflict attachment and the formation of social bonds Neuroplastic changes following severely adverse experiences are not something that a person grows out of and gets over These experiences alter the neurobiological and biochemical makeup and cause people to live in an emotionally relabeled world in which the evaluation of any social cue their behavior cognition and state of mind are biased towards the negative Even more worrying detrimental neurophysiological consequences are not limited to the traumatized individual but are often transmitted to subsequent generations through a process of social niche construction thereby creating a vicious cycle Thus the making and breaking forces of the brain are epitomized by parents alloparents peers and our socioeconomic niche This book expounds on the formative role that the social environment plays in healthy brain development especially during infancy childhood and adolescence Based on scientific findings the book advocates for bold measures and responsible stewardship to combat child abuse maltreatment and child poverty By bringing together insights from neuroscience evolutionary biology and social education work it lays out a fact based transdisciplinary endeavor that aims at rising to the societal challenge of providing a rewarding perspective to youth at risk It will be a valuable resource for academics from social education pedagogy cognitive science neuroscience as well as professionals in the fields of social work pedagogy education child welfare **Effective Cybersecurity Operations for Enterprise-Wide Systems** Adedoyin, Festus Fatai, Christiansen, Bryan, 2023-06-12 Cybersecurity or information technology security I T security is the protection of computer systems and networks from information disclosure theft of or damage to their hardware software or electronic data as well as from the disruption or misdirection of the services they provide The field is becoming increasingly critical due to the continuously expanding reliance on computer systems the internet wireless network standards such as Bluetooth and Wi Fi and the growth of smart devices which constitute the internet of things IoT Cybersecurity is also one of the significant

Computer Integrated Production Systems and Organizations
 Felix Schmid, Stephen Evans, Andrew W.S. Ainger, Robert J. Grieve, 2012-12-06 The Background to the Institute The NATO Advanced Study Institute ASI People and Computers Applying an Anthropocentric Approach to Integrated Production Systems and Organisations came about after the distribution of a NATO fact sheet to Brunel University which described the funding of ASIs The embryonic director of the ASI brought this opportunity to the attention of the group of people some at Brunel and some from outside who were together responsible for the teaching and management of the course in Computer Integrated Manufacturing CIM in Brunel's Department of Manufacturing and Engineering Systems This course had been conceived in 1986 and was envisaged as a vehicle for teaching manufacturing engineering students the technology of information integration through project work While the original idea of the course had also included the organisational aspects of CIM the human factors questions were not considered This shortcoming was recognised and the trial run of the course in 1988 contained some lectures on people issues The course team were therefore well prepared and keen to explore the People Organisation and Technology POT aspects of computer integration as applied to industrial production A context was proposed which would allow the inclusion of people from many different backgrounds and which would open up time and space for reflection The proposal to organise a NATO ASI was therefore welcomed by all concerned

Community-based Control of Invasive Species Theodore Alter, Paul Martin, Don Hine, Tanya Howard, 2019-06-01 Invasive species are among the greatest challenges to environmental sustainability and agricultural productivity in the world. One of the most promising approaches to managing invasive species is voluntary citizen stewardship. However, in order for control measures to be effective, private citizens often need to make sustained and sometimes burdensome commitments. Community Based Control of Invasive Species is based on five years of research by leading scholars in natural resource and human behavioural sciences which involved government and citizen groups in Australia and the United States. It examines questions including how can citizens be engaged in voluntarily managing invasive species, what communication strategies will ensure good motivation and coordination, and how can governing bodies support citizens in their efforts. With chapters on institutional frameworks, changing governance systems, thinking, organisational learning, engagement, communication and behavioural change, this book will be a valuable reference for researchers and practitioners involved in natural resources management.

Open Strategy for Digital Business Ewa Lechman, Joanna Radomska, Ewa Stańczyk-Hugiet, 2024-05-29 This book offers the reader a novel perspective on how digital contexts and open strategy approaches the act of opening up strategic initiatives beyond company managers to involve front line employees, stakeholders and entrepreneurs. Related to going beyond the claim that digital media drives open strategy by containing a detailed analysis of the interrelations between the two, the authors examine how ICT have diffused globally and trace the emerging links between digitally driven environments and open strategizing approaches. This book also draws a general picture of how and why digital technologies create new networks. A more competitive, transparent, empowered and inclusive environment would enhance development and encourage novel approaches to strategies implemented. Real life exemplifications of how and why digital technologies contribute to open strategizing are also provided. Various drivers impacting the necessity to develop more relational advantage are discussed and intertwined with the description of challenges observed in the case of imposing openness. A useful resource for researchers of strategic management and information systems as well as those looking at digital strategy and transformation.

The Tools of Law that Shape Capitalism Koen Byttebier, 2019-09-04 The book provides a critical analysis of the legal mechanisms that help shape the capitalist system and also makes proposals for deploying these tools in a different manner. Although often disguised in difficult legal jargon, in reality the main legal building blocks of the prevailing capitalist socio-economic system are simple, the most important being 1. money, 2. the company form, and 3. neo-liberal state organization aimed at making markets as free as possible for the entrepreneurial sector. Having been used to create the socio-economic order over 2-3 centuries, the legal systems that helped shape capitalist societies around the globe have also

contributed to a variety of fundamental problems that remain unaddressed by the capitalist system itself such as ever mounting public and private debt pollution and climate change an increasing polarization between rich and poor and a globally unjust fiscal order By proposing alternative uses for the tools of law that shape capitalism the book also makes proposals for dealing with these matters

Systems Thinking Analyses for Health Policy and Systems Development

Jo. M. Martins, Indra Pathmanathan, David T. Tan, Shiang Cheng Lim, Pascale Allotey, 2021-08-26 Health systems are fluid and their components are interdependent in complex ways Policymakers academics and students continually endeavour to understand how to manage health systems to improve the health of populations However previous scholarship has often failed to engage with the intersections and interactions of health with a multitude of other systems and determinants This book ambitiously takes on the challenge of presenting health systems as a coherent whole by applying a systems thinking lens It focuses on Malaysia as a case study to demonstrate the evolution of a health system from a low income developing status to one of the most resilient health systems today A rich collaboration of multidisciplinary academics working with policymakers who were at the coalface of decision making and practitioners with decades of experience provides a candid analysis of what worked and what did not The result is an engaging informative and thought provoking intervention in the debate This title is Open Access
